

Harvard School of Public Health

*Advancing
the Public's
Health
through
Learning and
Discovery*

Official Register
of Harvard University
1997-98

The background of the page is a faded, sepia-toned photograph of the Harvard School of Public Health building. A large sign is visible on the right side of the building, featuring the text "HARVARD SCHOOL OF PUBLIC HEALTH" in a vertical orientation. Above the sign, the numbers "677" are displayed in a grid. The building itself has a classical architectural style with columns and a pediment.

From the Dean

The twentieth century has been an era of remarkable progress in health, yet many threats to public health remain. Some infectious diseases, seemingly vanquished early in the century, have reemerged; new diseases, most notably AIDS, have appeared; and the burden of chronic diseases has grown increasingly heavy. Other problems, such as violence and injury, not formerly considered public health problems, are now within the purview of public health professionals. The preservation and enhancement of the health of populations demand sophisticated, professional skills and the integration of many disciplines into a broad strategy that embraces the way we live, our environment, and our system of health care.

The scope of public health is reflected in the range of courses, departments, centers, programs, and facilities described in this Official Register. The interests and expertise of faculty at the school are similarly diverse, extending across biological sciences, social sciences, numeric disciplines, and more. Scholars and professionals work together to overcome real-world public health challenges, including environmental hazards, new diseases, choices of lifestyle that rob individuals of many healthy years, inadequate access to health care, and the great parasitic diseases that kill and handicap millions around the globe. The school's multidisciplinary approach ensures that students gain both a broad perspective on public health and in-depth training in their field of interest.

This Register contains a wealth of information about educational opportunities at the Harvard School of Public Health. Though we have endeavored to make it accurate and comprehensive, it is necessarily an incomplete description of the learning experience available at the school. HSPH is a place to acquire new skills; a place to enrich one's professional perspective by interacting with fellow students, with HSPH faculty, and with scholars from cooperating schools and institutions; a place to gain a more sophisticated understanding of health sciences, health issues, and solutions to health problems; and a place to test one's ideals, objectives, and imagination against the imposing array of biological,

behavioral, social, economic, and political barriers to improved public health. For those seeking more details on programs or departments, we have incorporated contact information for appropriate resource people throughout the Register and invite prospective students to call or write at any time.

The overriding mission of HSPH, to advance the public's health through learning and discovery, comprises four objectives: to educate scientists, professionals, and leaders for public health; to foster new discoveries and develop better technologies for improved health of individuals and populations; to inform and influence debate on key public health issues; and to strengthen capacities and services that meet health needs in the community. We believe we are engaged in a vital enterprise of central importance to society. We welcome those who join us at the school to share in that sense of excitement and challenge.

James H. Ware
Acting Dean

The Harvard School of Public Health is accredited by the Council on Education for Public Health.

November 27-30	Thanksgiving recess	March 30	<i>d</i> period courses begin
December 15	Deadline for application to PhD programs in the natural sciences, offered through the Graduate School of Arts and Sciences (GSAS); deadline for application to other PhD programs offered through GSAS is December 30	May 22	<i>cd</i> and <i>d</i> period courses end
December 20-January 4	Winter recess	May 25	Memorial Day, a holiday
		June 4	Commencement

The Harvard School of Public Health

T

he history of professional education in public health at Harvard University began in 1909 with the establishment of the Department of Preventive Medicine and Hygiene in the Medical School, the first such department in the United States. In 1919, the Harvard-MIT School of Health Officers was formed under the joint management of Harvard University and the Massachusetts Institute of Technology (MIT). The School of Health Officers operated until 1922, when an endowment from the Rockefeller Foundation made possible the founding of the Harvard School of Public Health (HSPH).

Faculty and graduates of HSPH have been at the forefront of efforts to stem disease and promote health worldwide: from Alice Hamilton's pioneering studies of lead and mercury poisoning to Thomas Weller's pathbreaking research on the polio virus, from Philip Drinker's invention of the iron lung to the unprecedented 27-year stewardship of the US Centers for Disease Control and Prevention (1962-1989) by five successive HSPH alumni. Two Nobel Prizes, a Lasker Prize, two MacArthur Awards, presidential citations, and countless other honors attest to the excellence and impact of this work. More difficult to quantify—but a far better gauge—

are the perceptible gains in length and quality of life that have been realized through their efforts.

Today, HSPH includes over 300 faculty members from the diverse fields and disciplines that constitute public health. The student body comprises more than 700 persons from throughout the United States and over forty other countries. Students, like faculty, come from an array of fields, and include health services administrators, epidemiologists, nurses, dentists, lawyers, statisticians, environmental scientists, engineers, research assistants, psychologists, and social workers. Approximately 30 percent are physicians. Students in some programs may enroll immediately after earning an undergraduate degree.

HSPH celebrated its 75th anniversary throughout the 1996-97 academic year. The celebration culminated in a three-day symposium, April 27-29, 1997, titled "Gateway to World Health: New Science and Strategies in Public Health." The symposium brought together more than forty-five public health professionals, policy makers, and scientists to explore the wide range of the public health endeavor.

More than 500 alumni, staff, students, faculty, and friends of the school attended the symposium, and many more "attended" by watching video-conference transmissions or listening to a live audio broadcast via the World Wide Web (WWW). Selected highlights of this WWW program will remain available until April, 1998. Instructions for listening to these symposium highlights can be found by choosing the 75th anniversary links from the HSPH home page <<http://www.hsph.harvard.edu>>.

Degrees Offered by HSPH

HSPH offers programs leading to the graduate degrees of Master of Public Health (MPH), Master of Science (SM) in a public health discipline, Master of Occupational Health (MOH), Doctor of Public Health (DPH), and Doctor of Science (SD) in a public health discipline. The school also participates in Doctor of Philosophy (PhD) programs offered through the university-wide Program in Health Policy (see page 54) and the Biological Sciences in Public Health Program (see page 11). Diplomas for the MPH, DPH, and MOH degrees show the degree only. Diplomas for the SM and SD degrees also show the name of the department; in the Department of Environmental Health a concentration is designated as well.

For all HSPH programs, the Committee on Admissions and Degrees considers applicants' academic ability, the relevance of their previous education and experience, and their overall qualifications for graduate education in public health, including those qualities of character that reflect upon an individual's suitability to be a public health professional. Applicants must also satisfy the requirements of the department or program to which they are applying. Applicants to doctoral programs must demonstrate the ability to undertake original research.

The master's degrees are considered terminal degrees for individuals who seek professional positions in public health, though a few departments view the SM as preparation for doctoral study. The doctoral programs are designed for students with interests in the scientific basis of public health and preventive medicine who wish to pursue academic or research careers. Because specific prerequisites and degree requirements vary with the field of specialization, prospective applicants should consult the sections of this *Register* that describe degree programs in greater detail and consult with the individuals designated as contact persons for the various departments and programs. In general, requirements for the HSPH degree programs are as follows.

Master of Public Health The MPH program is geared toward professionals who hold a doctoral degree in medicine, dentistry, veterinary medicine, law, or other fields related to public health, or a master's degree in nursing. The MPH

is normally a nine-month (two-semester, 40-credit) program. Students concentrate in one of seven areas: international health, health care management, family and community health, law and public health, occupational and environmental health, quantitative methods, or clinical effectiveness. Please see page 7 for further information about the program.

Master of Science SM programs differ considerably from department to department. In general, eighteen-month (four-semester, 80-credit) SM programs are intended for applicants holding a bachelor's degree in a relevant field; some departments require or prefer applicants to have relevant work experience. A few departments also offer nine-month (two-semester, 40-credit) SM programs for applicants with a prior master's or doctoral degree or substantial work experience. Candidates for any SM degree must fulfill the school-wide requirements in biostatistics (BIO 200, BIO 201ab, or BIO 219ab) and epidemiology (EPI 200 or EPI 201a), as well as any requirements of the department in which they are enrolled. Students in professional SM programs must fulfill core requirements in biostatistics, epidemiology, environmental health sciences, health services administration, and social and behavioral sciences.

Master of Occupational Health The MOH program is designed to train physicians in the public health disciplines relevant to preventing occupational disease and injury. This nine-month (two-semester, 40-credit) degree program is usually taken as part of a two-year residency in occupational medicine. Please see page 32 for information about the program.

Doctor of Science Applicants to the SD program must hold a bachelor's degree. In some instances an applicant is expected to complete an SM program at the school before applying for admission to doctoral study. Candidates for the SD degree must fulfill the following basic requirements: completion of course work in one major field (20 credits) and two minor fields (10 credits each) and courses in introductory epidemiology (EPI 200 or EPI 201a) and intermediate biostatistics (ordinarily BIO 210cd and BIO 211cd); completion of the school-wide oral qualifying examination, usually by the end of the second year; completion of a program of

independent and original research in one of the basic disciplines of public health; the presentation and submission of this research in a thesis and the public defense of the thesis; and payment of at least two years of full-time tuition and one year of full-time reduced tuition. The *Student Handbook*, distributed during fall registration, provides detailed information about school-wide requirements and procedures. Departments may stipulate course and examination requirements beyond the school-wide requirements, and prospective applicants are encouraged to contact the department or program to which admission is sought for detailed information.

Doctor of Public Health Most applicants for admission to the DPH program hold a doctoral degree in medicine, dental medicine, or veterinary medicine; consideration is also given to applicants who hold an advanced degree in one of the disciplines basic to public health. The applicant must hold, or be in progress toward, an MPH degree, or its equivalent, from an approved institution. Once admitted to the school, DPH candidates are subject to the same academic requirements as candidates for the SD degree, described above.

Departments and Centers

With the notable exception of the MPH program, most of the school's teaching and research activities are carried out in eleven academic departments, which are described in some detail in this *Official Register*.

The school has also established several centers to advance research in areas of importance to health. These centers tend to be multidisciplinary in their approach, bringing together faculty from several HSPH departments and, in some instances, from several Harvard schools. Faculty affiliated with the centers offer courses in their field of interest through the school's academic departments and often provide opportunities for student involvement in research.

Center for Biostatistics in AIDS Research

Director: Stephen Lagakos, MPhil, PhD, Professor of Biostatistics

Interdisciplinary Program in Infectious Disease

Education and research on aspects of infectious disease occurs in a number of HSPH departments including the Departments of Cancer Biology, Environmental Health, Epidemiology, Nutrition, Population and International Health, and Tropical Public Health. These departments participate in the Interdisciplinary Program in Infectious Disease. This doctoral program is intended for those students who desire careers in research and teaching in infectious disease.

Prospective students must apply to one of the participating departments, and the degree will be issued from that department. Students are responsible for fulfilling the doctoral requirements of the home department in addition to the program's core requirements in biology, quantitative methods, and substantive infectious disease courses.

Alternatively, the Departments of Epidemiology, Population and International Health, and Tropical Public Health offer discipline-oriented doctoral or master's degree programs. Please refer to the appropriate sections of this *Official Register* for descriptions of these discipline-centered degree programs.

Center for Health Communication

Director: Jay A. Winsten, PhD, Associate Dean for Public and Community Affairs

Center for Prevention of Cardiovascular Disease

Director: Edgar Haber, MD, Elkan R. Blout Professor of Biological Sciences

Center for Quality of Care Research and Education (QCRE)

Director: R. Heather Palmer, MB, BCh, SM, Lecturer on Health Services

Center for Risk Analysis

Director: John D. Graham, AM, PhD, Professor of Policy and Decision Sciences

Educational Resource Center for Occupational Safety and Health

Director: David C. Christiani, MD, SM, MPH, Professor of Occupational Medicine and Epidemiology

François-Xavier Bagnoud Center for Health and Human Rights

Director: Jonathan M. Mann, MD, MPH, François-Xavier Bagnoud Professor of Health and Human Rights and Professor of Epidemiology and International Health (until January, 1998)

For more information about the Interdisciplinary Program in Infectious Disease, contact Jonathan Freeman, MD, SD, Department of Epidemiology, 677 Huntington Avenue, Boston, MA 02115.

Simmons Professor of Radiobiology

Kresge Center for Environmental Health

Director: **John B. Little, MD**, James Stevens
Simmons Professor of Radiobiology

Resources

The school's main buildings for research, teach-
ing, and administration are located in the heart

of Boston's hospital district and Harvard University's Longwood campus. The facilities adjoin those of Harvard's Medical School, School of Dental Medicine, and Francis A. Countway Library of Medicine, and are near Children's Hospital Medical Center, Beth Israel Deaconess Hospital, Brigham and Women's Hospital, and other Harvard-affiliated hospitals. The school is within walking distance of many cultural institutions, such as Boston's Museum of Fine Arts, and public transportation is readily available to other parts of Boston and Cambridge, where students may cross-register for courses at other Harvard schools and at MIT.

The library needs of the school are served principally by the Francis A. Countway Library of Medicine, which combines the resources of the Harvard Medical Library and the Boston Medical Library. With recorded holdings of more than 600,000 volumes and 4,200 current periodicals, it is one of the largest medical or health-related libraries in the country. The Countway also owns an extensive collection of historical materials dating from the fifteenth century. Students have borrowing privileges throughout the Harvard University library system. The Boston Public Library, MIT libraries, and other Boston-area libraries add to the total book and periodical resources available to students.

HSPH operates an Instructional Computing Facility dedicated to serving the course work and research computing needs of its students and faculty. Resources include SUN Unix computers, X-terminals, IBM personal computers, Apple Macintosh computers, a Novell network, dot matrix and laser printers; a wide array of software, including statistical packages, programming languages, analytical programs, and word-processing packages; services such as remote dial-in, file transfer, electronic mail, connections to the Internet and World Wide Web, user assistance, short courses, and computer accounts for funded research. Many academic departments also provide computing resources for their students. Additional services, such as computer classes, discounted hardware and software, user groups, and technical support, are available through the offices of Harvard's University Information Systems.

Master of Public Health Program

M

PH students come from all parts of the world, bringing to the program a wide variety of backgrounds and experiences. The majority are midcareer professionals preparing for advancement in their organizations or for transition into new fields. Most hold a professional degree in medicine, nursing, veterinary medicine, or law. Some hold a doctoral degree in a field related to public health, such as biology, behavioral sciences, or other natural and social sciences. On occasion, an individual is admitted to the program who holds a master's degree in a field closely related to public health and who has at least three years of relevant work experience.

Students enrolled in MD, DMD, or DDS programs and who have a career interest in public health and preventive medicine are eligible to apply for admission to the MPH program. Generally, these students undertake the MPH program while on leave of absence between the third and fourth year of medical or dental school. They receive the MPH degree upon successful completion of both programs and conferral of the doctoral degree. Students at Harvard Medical School may wish to inquire about the possibility of undertaking an integrated MD-MPH program.

MPH candidates may complete the requirements for the degree on a full-time or part-time basis (or may change from one status to the other). Full-time students normally complete the program in two semesters (September through

The Master of Public Health (MPH) degree is the most widely recognized professional credential for leadership in public health. The program is organized around seven career-oriented concentrations, each comprising a common core curriculum and specialty electives. The program emphasizes active, student-directed learning, problem-solving, and the acquisition of skills essential to the practice of public health.

May). Part-time students complete the requirements for the degree over a period of two or three years. Courses taken for credit in the Summer Session for Public Health Studies (see page 82) or the Program in Clinical Effectiveness (see page 82) may be counted toward the degree.

MPH students are required to complete a minimum of 40 course credits and must fulfill core requirements in the fundamental public health disciplines. These requirements include an interdisciplinary course on the ethical basis of the practice of public health (ID 250 or 251s); the practice course for the chosen concentration (see course listings on page 10); one course in biostatistics (BIO 200 or 201ab); one course in epidemiology (EPI 200 or 201a); one course in environmental health (usually EH 201b or 202d);

one course in health and social behavior; and 2.5 to 5 credits in management courses relevant to the chosen concentration.

Applicants to the MPH program select one of seven areas of concentration in which they complete a second tier of recommended courses. Each of these concentrations offers a selection of optional tracks, or interest areas, allowing students to pursue in depth one or more areas of particular relevance to their career goals. The tracks enable students in the interdisciplinary MPH program to establish a second “home” in one of the school’s academic departments, such as Health Policy and Management or Maternal and Child Health. Beyond the program and concentration requirements, students are encouraged to consult with faculty advisors to choose elective courses best suited to their needs. Concentration goals, tracks, and general requirements are described below.

International Health This concentration is intended to prepare health professionals for leadership roles in the practice of international health, with a special emphasis on the health problems of disadvantaged populations in developing countries. The concentration enables students to work toward health improvement by taking account of demographic and epidemiologic changes, the organization of health care and evolving patterns of health care demand, new scientific knowledge and technology, and the roles of professionals in policy, law, communications, and advocacy. It also assists them in finding new ways to strengthen national and institutional capacities for health policy making and management. Graduates of the program have assumed leadership positions in national ministries of health, international organizations, donor aid agencies, private voluntary organizations, research and academic institutions, and the private sector.

The International Health concentration has no defined tracks. Students are encouraged to choose elective courses best suited to their professional development.

Health Care Management This concentration prepares professionals for leadership positions in health care organizations that provide direct care (such as hospitals, group practices, and

home health agencies), those that pay for and/or organize health care (such as governments, health insurers, and health maintenance organizations), and those that supply direct-care providers (such as pharmaceutical companies and biotechnology firms). Course work covers the growing role of managed care in the health care enterprise. Program graduates fill many roles, from consultants and staff analysts, to middle management and executive positions. Others go on to undertake doctoral study.

Beyond the MPH core requirements, students are encouraged to elect one of four tracks geared to different professional interests, within which they take at least 5 credits chosen from clusters of recommended courses. Students choose between either a management or a policy (economics and political science) disciplinary approach to public health.

Family and Community Health This concentration focuses on the promotion of health and the prevention of disease in populations through the preparation of health professionals with leadership skills in public health. Courses emphasize strategies for establishing health objectives, data collection and analysis, the management of fiscal and manpower resources, consultation, communication, advocacy, and policy formation in the public sector. The program prepares students for positions in diverse public health and nonprofit settings, including federal, state, and local government, voluntary health organizations, and community-based primary care settings. Positions filled by program graduates include public health administrator, health planner, health policy analyst, and health educator; others have gone on to undertake doctoral study.

Beyond the MPH core requirements, students are encouraged to develop expertise in a substantive area by selecting a track geared to their professional interests. Areas of interest include maternal and child health, community health, mental health and substance abuse, women and health, and health promotion and disease prevention.

Law and Public Health This concentration is designed to train leaders in the field of public health law. The course of study introduces law-

yers to the science of public health, provides them with skills in analysis of public health problems, and allows them to design a curriculum that will meet their particular interests. The concentration prepares graduates for positions in a variety of settings, including work in a health law or environmental section of a law firm, positions in local, state, and federal government, or posts in academia.

Beyond the MPH core requirements, lawyers are encouraged to develop a specialization in a substantive area by choosing among clusters of recommended courses in such fields as health care delivery or environmental health.

Occupational and Environmental Health This concentration is designed for physicians and other professionals who intend to practice occupational medicine or to hold responsible positions in occupational and/or environmental policy and management. The curriculum focuses on assessing workplace hazards, the physiologic and biomechanical aspects of work, and a practical problem-solving approach to health problems in various work settings.

The concentration features three areas of special interest: occupational medicine, occupational health, and environmental health. The occupational medicine track is designed for physicians who intend to satisfy the requirements of the American Board of Preventive Medicine for certification in occupational and environmental medicine. The requirements for the Master of Occupational Health (MOH) degree are similar to those of the MPH in occupational medicine; physicians may elect either degree. Please see page 32 for information about the MOH program.

This concentration also fulfills the first-year requirements of the two-year residency program in occupational and environmental medicine (see page 32 for more information on this program).

Over thirteen years of pediatric practice, John Stull has tried to see children and their families as members of a special population he calls "community." "To me," he says, "the idea of public health is understanding health and disease in relation to the larger framework of social, cultural, and, increasingly, medical-service structures.

"One of my reasons for coming to HSPH is that I was getting frustrated by the limitations of addressing health problems solely from a doctor's office. I wanted to step back and learn skills and concepts that would enable me to go back into the

clinical pediatric setting with more effective ways of improving the health of children, their families, and their communities.

"With the ongoing changes in health care, there is a lot of room for population-based thinking, but it needs to be done with integrity and caution."

Quantitative Methods This concentration prepares students for public health careers in which quantitative methods are central. It is designed for midcareer health professionals and those in the early stages of their careers. The concentration emphasizes study design and data analysis, and the application of quantitative methods to decision making and to research in public health. Program graduates commonly supervise population-based health research in government, health care institutions, and private industry. Many graduates practice in academic medicine.

Beyond the MPH core requirements, concentrators must take an additional 2.5 credits of introductory epidemiology and 7.5 credits in intermediate/advanced biostatistics and epidemiology. Concentrators may choose from among advanced quantitative courses at HSPH or elsewhere in the university, including biostatistics, epidemiology, decision sciences, demography, needs assessment, and evaluation.

Clinical Effectiveness This concentration prepares physicians for clinical research responsibilities and for leadership roles in evaluating and improving all aspects of health care delivery. It is concerned with identifying the most appropriate, ethical, and cost-effective means of providing health care through prevention, early de-

Program Director: Gareth M. Green, MD, Associate Dean for Professional Education

For more information about the MPH program, please contact Roberta Gianfortoni, Director for Professional Training, Office for Professional Education, 677 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-0090
Fax: 617-432-3365
E-mail: rgianfor@hsph.harvard.edu

The MPH program serves as a required academic year for residency training in preventive medicine, aerospace medicine, or occupational and environmental medicine. Please see page 32 for information about the occupational and environmental medicine residency.

tection, or treatment, and is designed to provide the analytic and quantitative training necessary to evaluate clinical practices. Along with the broad perspective the program offers on general aspects of public health, this training provides a basis for identifying the health policy implications and public health benefits of the results of clinical investigations. Major areas of professional interest for concentrators include clinical epidemiology and biostatistics, cost-effectiveness analysis, medical decision analysis, health services research, quality improvement in health care, and measurement of health-related quality of life. The concentration is limited to clinicians enrolled initially in the Summer Program in Clinical Effectiveness (see page 82).

Practice Courses for Master of Public Health Students, 1997-98

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information. Descriptions of other core courses and electives for the MPH program are included in the course listings of the respective departments.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1998 summer sessions).

ID 250. Ethical Basis of the Practice of Public Health

ID 250a (Roberts, Reich)

ID 250b (Roberts)

Provides a broad overview of the main philosophical and moral ideas that are used to resolve debates of public health policy. Helps students develop the capacity to analyze, criticize, evaluate, and construct policy-oriented arguments. (2.5 credits)

ID 251s. Ethical Basis of the Practice of Public Health: Health Care Delivery (Brennan)

Emphasizes US health care policy and modern medical ethics to explore the political theory of medical care. Helps health professionals understand the manner in which political economy and ethics interact in health care policy decisions. (2.5 credits)

ID 261cd. Practice of Health Care Management (Kane, McDonough)

Offered through two sections: one focuses on the managerial skills required of public health professionals, including leadership, negotiations, interdisciplinary teams, and communication. The other section explores the policy-making process from a political perspective. Field work for both sections provides practical experience in health care management or health policy development. (5 credits)

ID 262a. Practice of International Health (Cash)

Defines the scope of international health, highlights contemporary issues, and reviews case studies of policies and practices. Topics include world health and development, health transitions, disease control, primary health care, child survival, essential drugs, health policy, and evolving roles of international and non-governmental organizations. (2.5 credits)

ID 263cd. Practice of Occupational Health (Smith, Herrick)

Explores the relationship between working conditions and health by focusing on the assessment of workplace hazards, the physiology and biomechanical aspects of work, and a practical approach to health problems in various work settings. (5 credits)

ID 264bcd. Family and Community Health (Gardner, Kurland)

Field work enables students to apply managerial and analytic techniques to problems confronting public or community health agencies. (5 credits)

ID 265bc. Practice of Quantitative Methods (Monson, Cotton)

Explores practical and conceptual issues in the design, conduct, analysis, and evaluation of human studies through the discussion of current research and methodologies. Students design studies to address important health problems. (5 credits)

ID 330f. Field Trip (Hemenway)

Gives students an overview of the activities of the Centers for Disease Control and Prevention (CDC) in Atlanta and an opportunity to meet individually with professional staff. Lectures and tutorials relate to such disciplines as occupational diseases, surveillance systems, epidemiology, control measures for chronic and infectious diseases, and CDC's role in international health. (1 credit)

Division of Biological Sciences

Doctor of Philosophy in Biological Sciences in Public Health (BPH)

Students wishing to study cellular and molecular biology or physiology as they pertain to major problems in public health should apply to the Biological Sciences in Public Health program. This program offers the PhD degree through Harvard University's Graduate School of Arts and Sciences, Division of Medical Sciences, Committee on Biological Sciences in Public Health.

Participating HSPH departments offer PhD programs in the following areas:

- **Cancer Biology** Cancer Cell Biology, Virology, Immunology
(Note: Applicants holding clinical degrees in human or veterinary medicine should apply to the SD program.)
- **Environmental Health** Physiology; other programs where the applicant has a significant interest in laboratory versus field work
- **Molecular and Cellular Toxicology**
- **Nutrition** Nutritional Biochemistry
- **Tropical Public Health** Immunology and Molecular Biology of Parasitic and Other Infections

These programs are described in the departmental sections of this *Official Register*. In general, the BPH program offers a firm foundation in the basic biomedical sciences, as well as in epidemiology and biostatistics. Specific courses supplement this core, as dictated by individual research concentrations. Students in this pro-

The Division of Biological Sciences (DBS) is an umbrella organization encompassing the HSPH Departments of Cancer Biology, Molecular and Cellular Toxicology, Nutrition, Tropical Public Health, and Environmental Health. In most of these departments, two doctoral degrees are offered: the Doctor of Philosophy (PhD) and the Doctor of Science (SD). In general, the PhD programs center on laboratory-based investigation in the biological sciences, while the SD programs emphasize epidemiological analysis.

gram engage in laboratory rotations in three different research areas to enable them to assess realistically their interests in a thesis project and to evaluate the suitability of the laboratory and the mentor. At the completion of these rotations, students select an area of concentration and a thesis research laboratory and complete the required curriculum. A qualifying examination must be passed before engaging in thesis work, and the thesis must be defended before the granting of the PhD. Some students also participate in the Harvard-Markey Biomedical Scientist Training Program, which is designed to offer PhD students a greater knowledge of human biology and disease.

Arthur Lee, associate professor of molecular biology, works to identify the genes and factors important to the health of blood vessel walls.

For application materials and information about admission to the PhD program, please contact the Admissions Office, Division of Medical Sciences, Harvard Medical School, 260 Longwood Avenue, Boston, MA 02115.

Phone: 617-432-0162

The deadline for application to the PhD program is December 15.

For application materials and information about admission to the SD program, please contact Caroline Daniels, Assistant Director of Admissions, Harvard School of Public Health, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1031

Fax: 617-432-2009

E-mail: admisofc@sph.harvard.edu

The deadline for application to the SD program is January 2.

Applicants who have specific questions about the PhD program may contact Ruth Kenworthy, Administrator, Division of Biological Sciences, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-4470

Fax: 617-430-0433

E-mail:

kenworthy@cvlab.harvard.edu

Faculty

Director, Division of Biological Sciences: Edgar Haber, MD (Columbia University); Elkan R. Blout Professor of Biological Sciences and Director of the Center for Prevention of Cardiovascular Disease; Professor of Medicine, Harvard Medical School. Identification of novel genes expressed in cells that contribute to the arteriosclerotic process with the goal of finding interventions that are unique to the arterial wall.

Program Director, Committee on Biological Sciences in Public Health: Dyann F. Wirth, PhD (Massachusetts Institute of Technology); Professor of Tropical Public Health. Mechanisms of drug resistance in malaria, including molecular genetic analysis and field-based studies; genetic analysis of malaria transmission; analysis of gene expression; transsplicing and

As a child, Jyothi Rengarajan wanted to make nature films or to be an astronomer. Now, she's interested in immunology, specifically T-helper cell development. After graduation, she plans to continue doing research that will help expand the immunologic understanding of infectious diseases. "I'd also like to get involved in policy-oriented areas, such as global vaccine development. I think fields like this benefit from having the views of both basic scientists and policy makers," she says.

"In the DBS program, you are exposed to a variety of perspectives: public health, medical, and social. One of the most important things I've learned is that the health of one country ultimately affects the rest of the world—that we have a global responsibility to work for public health."

Applicants generally have a bachelor's degree and demonstrated competence in organic and biological chemistry, general biology, physics, and calculus. Those deficient in one of these areas may be admitted provisionally on the condition that appropriate courses will be taken before and/or after entering the program. Applicants must take both the GRE general and subject tests by October in order to meet the application deadline of December 15.

All students admitted to the program receive a stipend and tuition support. Students are encouraged to apply for fellowships from outside sources since certain external fellowships provide higher stipends. While funds to support international students are limited, one special scholarship is available each year for a student from a developing, sub-Saharan African country. There is also a university-wide fellowship program that provides funding to qualified underrepresented minority students in the sciences.

Graduates ordinarily assume positions as faculty members and research scientists at medical schools, research institutes, and schools of public health. Career opportunities in the biological sciences as they apply to public health are expected to grow both in academia and in the biotechnology and pharmaceutical industries.

Courses Offered by the Division of Biological Sciences, 1997-98

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about pre-requisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1998 summer sessions).

DBS 205ab. Interdepartmental Seminar in the Biological Sciences (Kelsey, Paulauskis)

Presents current research by faculty members in carcinogenesis,

DNA damage and repair, immunology, molecular biology, radiobiology, respiratory biology, and virology. (5 credits)

DBB 207cd. Statistical Methods in Biology (Catalano)

Familiarizes students with the statistical methods used in laboratory research for design of experiments and statistical analyses of hypotheses. Topics include theory of probability and statistics, analysis of data, and ANOVA and multiple regression. (5 credits)

DBE 208cd. Pathophysiology of Human Disease (Kobzik)

Surveys disease problems in the cardiovascular, respiratory, hematopoietic, reproductive, and gastrointestinal systems. Emphasizes the pathophysiology of disease manifestations, the pathogenesis of the disease process, and public health perspectives. (5 credits)

DBN 209d. Membrane Trafficking (Wessling-Resnick)

Presents a molecular overview of the elements involved in membrane traffic, describes how pathways are interconnected, and explains how regulatory mechanisms maintain cellular integrity through membrane traffic. (2.5 credits) Not offered 1997-98.

DBS 225cd. Applied Molecular Biology (Shoe-maker)

Covers the theoretical and practical aspects underlying molecular biology technologies. Focuses on ways that different procedures can work together to solve research problems, and pitfalls to avoid. (2.5 credits) Offered 1997-98 and alternate years.

DBS Elective Courses

The Division of Biological Sciences offers interdisciplinary training, with students taking courses in several different departments to meet their individual requirements. All students complete core course requirements and elective courses during their first two years of study. In addition to core courses in biochemistry, cell biology, genetics, microbiology, and physiology (offered through the Division of Medical Sciences), students take one or more of the following elective courses, which are described in the departmental listings of this Official Register.

CB 204ab	Immunobiology
CB 207ab	Radiation Biology
CB 212ab	Introduction to Cancer Biology
EH 205ab	Human Physiology
EH 223ab	Advanced Respiratory Physiology
EH 225cd	Advanced Topics in Physiology
NUT 202cd	The Science of Human Nutrition
TOE 204ab	Principles of Toxicology
TOX 225cd	Genetic Toxicology
TOX 250cd	Molecular and Cellular Toxicology
TPH 208cd	Immunology of Infectious Diseases
TPH 216cd	Cellular and Molecular Biology of Parasites

Faculty from several HSPH departments are affiliated with DBS and are listed below. Please refer to the index to locate the research interests of HSPH faculty.

Alberto Ascherio	John B. Little
Robert B. Banzett	Stephen H. Loring
Stephen M. Beverley	John E. Maggio
Joseph D. Brain	James H. Maguire
Harriet A. Burge	Donald K. Milton
James Butler	Richard R. Monson
Hannia Campos	Lucas M. Neas
Harold A. Chapman, Jr.	Bjorn R. Olsen
David C. Christiani	Joseph D. Paulauskis
John R. David	Karen E. Peterson
Bruce Demple	Willy F. Piessens
Douglas W. Dockery	Lorenz R. Rhomberg
Claire M. Doerschuk	Eric B. Rimm
Jeffrey M. Drazen	Stephen N. Rudnick
Raymond L. Erickson	P. Barry Ryan
Myron E. (Max) Essex	Frank M. Sacks
John S. Evans	Leona D. Samson
Wafaie Fawzi	John C. Samuelson
Timothy E. Ford	Robert H. Schiestl
Jeffrey J. Fredberg	Robert Schlegel
Laurie H. Glimcher	Joel D. Schwartz
John J. Godleski	Jacob Shapiro
Peter Goldman	Steven A. Shea
Rose H. Goldman	Charles B. Shoemaker
Gareth M. Green	Stephanie A. Shore
Michael J. Grusby	Constantinos Sioutas
Donald A. Harn, Jr.	Thomas J. Smith
Joseph J. Harrington	Stover H. Snook
J. Woodland Hastings	Joseph G. Sodroski
M. G. Herrera-Acena	Frank E. Speizer
Robert F. Herrick	John D. Spengler
Martin S. Hirsch	Bruce M. Spiegelman
Gökhan S. Hotamisligil	Andrew Spielman
Howard Hu	Meir J. Stampfer
Phyllis J. Kanki	Armen H. Tashjian, Jr.
Karl T. Kelsey	W. Allan Walker
David M. Knipe	Ning Wang
Lester Kobzik	Angeline E. Warner
Petros Koutrakis	Marianne Wessling-Resnick
Tun-Hou Lee	Walter C. Willett
Howard L. Liber	Xiping Xu
Klaus Lindpaintner	Yukio Yanagisawa

homologous recombination in *Leishmania enriettii* using molecular genetic techniques.

(Arthur) Mu En Lee, BM (Kaohsiung Medical College), PhD (University of California, San Francisco); Associate Professor of Molecular Biology. Transcriptional regulation of genes expressed in the blood vessel wall in normal and diseased states.

Guy L. Reed III, MS, MD (Stanford University); Assistant Professor of Immunology. Analysis of platelet activation and cellular interactions by molecular cloning, biochemical, and histological techniques.

Mary E. Russell, MD (University of Health Sciences, Chicago Medical School); Assistant Professor of Cardiovascular Biology. Monocyte/macrophage activation; cellular adhesion and migration; arteriosclerosis.

The following faculty member has a secondary appointment at HSPH. His primary affiliation is with Harvard Medical School.

Mark Perrella, MD (University of Nebraska); Assistant Professor of Biological Sciences. Identification of factors important in regulating vascular tone during septic shock and the molecular mechanisms that regulate these factors.

DBS 231abcd. Interdisciplinary Seminar in Cardiovascular Disease Prevention (Haber, Willett, Kawachi)

Covers research in cardiovascular biology, epidemiology, health policy, and social behavior. (5 credits) Not offered 1997-98.

Independent Study, Laboratory Rotations

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research or to undertake specialized readings or studies. Offers hands-on experimental methods of research in the biological sciences and includes individual original laboratory work, assigned readings, and participation in seminars and journal clubs.

Department of Biostatistics

The goal of the Department of Biostatistics is to contribute to the theory and practice of statistical science as it is applied to the biomedical and health sciences. The department accomplishes this goal by training students for careers in the fields of biostatistics and health decision sciences.

Professor Nan Laird chairs the Department of Biostatistics. She teaches a number of courses on topics such as statistical methods and inference.

The programs offered by the Department of Biostatistics provide rigorous training in the development of methodology, collaboration, teaching, and consultation on a broad spectrum of health-related problems. The faculty includes leaders in the development of statistical methods for clinical trials and observational studies, studies on the environment, animal experiments, and longitudinal studies. Members of the department lead large multidisciplinary projects and serve on many national and international advisory committees. The department's research in statistical methods and its interdisciplinary collaborations provide many opportunities for student participation.

Current departmental research includes the development of statistical and computing methods for clinical trials, including survival and sequential analysis methodology; environmental and epidemiologic research, including methods for longitudinal studies, analyses with incomplete data, meta-analysis, and statistical aspects of the study of AIDS; collaborative clinical research in the treatment of cancer and AIDS; quantitative problems in health risk analysis, technology assessment, and clinical decision making; statistical methodology in psychiatric research and in genetic studies; and collaborative research activities with biomedical scientists in other departments at HSPH, Harvard Medical School, and affiliated hospitals.

Applicants to the department should have successfully completed calculus through multivariable integration and at least one semester of linear algebra. Knowledge of a programming language such as FORTRAN or C is required, and introductory courses in probability and statistics and practical knowledge of a statistical computing package such as SAS, SPSS, or Stata are desirable. From time to time the department will admit students without this level of preparation with the understanding that the student will promptly make up any deficiencies, usually by taking additional courses prior to entering the program.

Limited funding may be available for some students, mainly through five biostatistics training grants (in AIDS, cancer, the environment, geriatrics, and mental health) and one health deci-

sion sciences training grant (in medical informatics). Traineeships and assistantships are awarded on a competitive basis to qualified applicants.

Recent graduates have assumed faculty posts at universities and schools of public health, as well as positions in research laboratories and centers in the federal government, in pharmaceutical companies, and in research institutes.

As described below, the department offers both a four-semester and a two-semester Master of Science (SM) program and a Doctor of Science (SD) program with a concentration in Biostatistics, as well as a four-semester SM program and an SD program with a concentration in Health Decision Sciences. For information about the Master of Public Health concentration in Quantitative Methods, please refer to page 9. Detailed information about requirements and elective options can be found in a handbook distributed by the department.

Master of Science in Biostatistics (four-semester program)

Biostatistics The main purpose of the four-semester SM program with a concentration in Biostatistics is to prepare students for doctoral study, although a limited number of qualified students may pursue the master's degree only.

Of the 80 credits necessary to earn the four-semester SM, 2.5 credits must be used to fulfill the school-wide epidemiology requirement (EPI 200 or EPI 201a), and 25 credits must be earned in the following core courses: BIO 230ab, *Probability Theory and Applications*; BIO 231cd, *Statistical Inference I*; BIO 232ab *Methods I*; BIO 233cd, *Methods II*; and BIO 235cd, *Regression and Analysis of Variance*. An additional 15 credits must be chosen from biostatistics and epidemiology courses at the level of BIO 210cd or higher (but below 300), of which 10 credits must be chosen from a specific list of biostatistics, health policy and management, and interdisciplinary offerings. In addition to formal course work, students acquire experience in the planning of experiments and the analysis of data by participating in a consulting seminar. Students also choose from a variety of elective courses.

Health Decision Sciences The concentration in Health Decision Sciences offers integrated educational training in decision sciences within the context of health problems. The program is jointly offered by the Departments of Biostatistics and Health Policy and Management. All students must be admitted to the master's program in one department or the other, and degrees are offered through one department or the other.

Of the 80 credits necessary to earn the SM, 2.5 credits must be used to fulfill the school-wide epidemiology requirement (EPI 200 or EPI 201a), and students must complete the following core courses: HPB 280b, *Decision Analysis for Health and Medical Practices*, or HPM 286s, *Decision Analysis in Clinical Research*; HPB 281c, *Methods for Decision Analysis in Health Care Technology Assessment*; HPE 284ab, *Decision Theory*; BIO 230ab, *Probability Theory and Applications*; BIO 231cd, *Statistical Inference I*; and preparation in computing. Fifteen additional credits must be earned from the Health Decision Sciences core and extended core (see list under SD program), along with at least 10 additional credits in biostatistics. The consulting requirement may be met by obtaining practical experience under the tutelage of a faculty member. Students also choose from a variety of elective courses.

Master of Science in Biostatistics (two-semester program)

Like the four-semester SM program, the main emphasis of the two-semester program with a concentration in Biostatistics is the preparation of students for doctoral study. The program is designed for students who have a master's degree in one of the mathematical sciences or a doctorate in a quantitative field. Applicants must have a mathematical and statistical background sufficient to achieve a level of proficiency after one year of study comparable to that achieved in the four-semester program. Since completion of the program in one year requires that courses be taken out of sequence, considerable background in probability and statistical inference is needed.

The requirements for the two-semester SM are essentially the same as for the four-semester program. The 25-credit core must be completed,

For more information about research and training in Biostatistics, please contact Ellen Fredberg, Administrator, Department of Biostatistics, 677 Huntington Avenue, Boston, MA 02115. Phone: 617-432-1056 Fax: 617-739-1781 E-mail: dept@hsph.harvard.edu

The Department of Biostatistics offers postdoctoral fellowships for biostatistical training in the areas of AIDS, cancer, and environmental health. In a joint program with the Department of Epidemiology, the department also offers doctoral and postdoctoral training in epidemiologic and statistical methods as arising in the study of psychiatric disorders. Funded by the National Institute of Mental Health or the National Institutes of Health, both the doctoral and postdoctoral fellowships may be awarded only to US citizens or permanent residents. Candidates for postdoctoral fellowships must have a doctoral degree in biostatistics, statistics, or a related discipline. For more information, please contact the Chair of the Postdoctoral Committee, Department of Biostatistics, 677 Huntington Avenue, Boston, MA 02115. Phone: 617-432-1056 Fax: 617-739-1781 E-mail: dept@hsph.harvard.edu

For more information about research and training in Health Decision Sciences, please contact Milton C. Weinstein, PhD, Department of Health Policy and Management, 718 Huntington Avenue, Boston, MA 02115
Phone: 617-432-0805
E-mail: mcw@hsph.harvard.edu

Faculty

Department Chair: Nan M. Laird, PhD (Harvard University); Henry Pickering Walcott Professor of Biostatistics. Longitudinal studies; non-response and missing data methods, discrete data analysis; Bayesian methods; meta-analysis.

Sudeshna Adak, MS (Indian Statistical Institute), PhD (Stanford University); Assistant Professor of Biostatistics. Spectral analysis of nonstationary time series; time-varying ARMA modeling; generalized linear models.

Rebecca A. Betensky, PhD (Stanford University); Assistant Professor of Biostatistics. Sequential analysis; correlated binary data

Paul J. Catalano, SD (Harvard University); Assistant Professor of Biostatistics. Repeated measures; multivariate models; dose-response modeling; risk assessment; environmental statistics.

Victor G. De Gruttola, SM, SM, SD (Harvard University); Professor of Biostatistics. Methods for analysis of repeated measures from longitudinal studies; methods for epidemiological analysis of AIDS.

Garrett Fitzmaurice, MSc (University of London), MA (National University of Ireland), SD (Harvard University); Assistant Professor of Biostatistics. Likelihood-based and non-likelihood approaches to analyzing multivariate binary outcomes; methods for analyzing mixed discrete and continuous outcomes.

Peter B. Gilbert, MS, PhD (University of Washington); Assistant Professor of Biostatistics. Statistical methods for HIV and AIDS; survival analysis; efficient estimation in semiparametric models; multinomial logistic regression models; biased sampling models. (From January, 1998)

Robert J. Gray, SM, PhD (Oregon State University); Senior Lecturer on Biostatistics. Clinical trials; survival analysis; techniques for exploratory data analysis and model building.

although students who have taken equivalent course work elsewhere may petition to substitute more advanced courses. Greater flexibility is allowed in the other requirements, since only 40 total credits are required. Other courses are selected in consultation with a faculty advisor to complement and extend the student's previous training in biostatistics.

The department does not offer a two-semester program in Health Decision Sciences.

Doctor of Science in Biostatistics

Biostatistics The doctoral concentration in Biostatistics is designed for those who have demonstrated both interest and ability in scholarly research. Qualified applicants may apply directly to the doctoral program without a prior advanced degree. Candidates must complete a minimum of two academic years of full-time study in residence at HSPH, pass the written departmental comprehensive examination and the school-wide oral qualifying examination, and complete, defend, and submit a thesis.

Beyond the school-wide requirement of introductory epidemiology (EPI 200 or EPI 201a), the course work for the program is built on a 30-credit core curriculum which includes BIO 230ab, *Probability Theory and Applications*; BIO 231cd, *Statistical Inference I*; BIO 232ab, *Methods I*; BIO 233cd, *Methods II*; BIO 235cd, *Regression and Analysis of Variance*; and BIO 251cd, *Statistical Inference II*. In addition, 25 credits of biostatistics courses at the 230 level or higher (but below 300) are required; these courses are chosen by the student in consultation with an advisor. Students must also complete two minors (10 credits each), only one of which may be quantitative (such as theoretical statistics, biomedical computing, or health decision sciences) while the other must be substantive (such as the biology of cancer or AIDS).

Doctoral students are required to participate as a teaching assistant in a course offered by the department. In order to acquire experience in the planning of experiments and the analysis of data, students must take the consulting seminar.

Health Decision Sciences The doctoral concentration in Health Decision Sciences offers integrated educational training in decision analysis, cost-benefit and cost-effectiveness analysis, behavioral decision theory, operations research, applied welfare economics, statistical inference, computer science, and biostatistics, all within the context of health problems. This program is coordinated with, but distinct from, the decision sciences track in the PhD Program in Health Policy, described under Health Policy and Management (see page 54).

Candidates must complete a minimum of two academic years of full-time study in residence at HSPH, pass the written departmental comprehensive examination and the school-wide oral qualifying examination, and complete, defend, and submit a thesis. The program requires 50 credits of course work in the major field, plus 10 credits in each of two minor fields, one of which must be biostatistics. Health policy and management is acceptable for the other minor, provided the courses focus on subject-oriented rather than quantitative material.

The course work includes the school-wide requirement of introductory epidemiology (EPI 200 or EPI 201a); BIO 230ab, *Probability Theory and Applications*; BIO 231cd, *Statistical Inference I*; 20 credits from the Health Decision Sciences core; and 20 credits from the extended core. The core includes the following courses: HPB 280b, *Decision Analysis for Health and Medical Practices*; HPB 281c, *Methods for Decision Analysis in HealthCare Technology Assessment*; HPB 282d, *Cost-Effectiveness and Cost-Benefit Analysis for Health Program Evaluation*; and HPE 284ab, *Decision Theory*. For a list of extended core options, see the department's student handbook.

All doctoral students are required to participate as a teaching assistant in a course offered by the department. In order to acquire experience in decision analysis, students must take the consulting seminar or complete an outside project approved by the seminar director.

As an undergraduate math major, Scarlett Bellamy planned to become a pediatrician. Her interest turned to biostatistics as a junior when, in a summer internship program, she spent ten weeks in the biostatistics program at the University of North Carolina, Chapel Hill. She is now earning her master's degree in biostatistics at HSPH. "I began to think of biostatistics as the perfect way to do math and medicine together," she says. "As a physician, you can help people, but only one person at a

time. In public health, you can do more with the same amount of time and energy.

"The need for biostatistics in public health is large, and the applications are diverse. I like having the knowledge and expertise to be able to work on an age study one day and on a project to curb adolescent smoking the next."

Courses Offered by the Department of Biostatistics, 1997-98

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information. Either BIO 200 or BIO 201 satisfies the school-wide requirement for an introductory course in biostatistics; however, individual programs may require one or the other.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1998 summer sessions).

BIO 112a. Computing Principles and Methods (Allred, Laird)

Provides basic computer literacy to students from all disciplines. Topics include computer architecture and terminology; organization, capabilities, and limitations of computers; programming principles; database management; telecommunications; and data analysis software. (2.5 credits)

BIO 113. Introduction to SAS

BIO 113b. (Allred, Laird) (2.5 credits)

BIO 113e. (Fenton, Laird) (1.25 credits)

BIO 113t. (Allred, Laird) (2.5 credits)

Provides instruction in the use of SAS for statistical analysis, database management, and computer programming. Discusses basic issues in each of these areas in the context of teaching specific skills required to use SAS effectively.

BIO 114c. C-Programming

Prepares students to write programs in C. Covers variable definitions and data types, arithmetic expressions, program looping and if-statements, single and multidimensional arrays, functions, use of standard libraries, structures, pointers, and strings. (2.5 credits) Not offered 1997-98.

BIO 200ab. Principles of Biostatistics (Catalano)

Acquaints students with the basic concepts of biostatistics and their application and interpretation. Topics include descriptive statistics, graphics, diagnostic tests, probability distributions, inference, tests of significance, association, linear and logistic regression, and life tables. (5 credits)

BIO 200s. Principles of Biostatistics I (Testa)

Presents the first part of introductory biostatistics, covering data presentation, numerical summary measures, rates and standardization, life tables, and sampling distributions. Introduces probability to quantify uncertainty. (2.5 credits)

BIO 200t. Principles of Biostatistics II (Richardson)

Presents the second part of introductory biostatistics, exploring inference in greater depth and emphasizing data analysis. Other topics include comparison of two means, analysis of variance, nonparametric methods, inference on proportions, contingency tables, multiple 2X2 tables, correlation, simple regression, multiple and logistic regression, analysis of survival data, and sampling theory. (2.5 credits)

BIO 201ab. Introduction to Statistical Methods (Wand, Laird)

Covers basic statistical techniques for analyzing data from epidemiology, environmental health, biomedical, and other relevant research. Topics include descriptive statistics, probability, estimation and inference, distribution-free methods, contingency tables, regression analysis, analysis of variance, and study design. Designed as an alternate to BIO 200ab, for students desiring emphasis on theoretical developments, or for those having had an introductory statistics course at the level of BIO 200. (5 credits)

BIO 204cd. Biostatistics for Medical Investigators (Gelman)

Covers topics in diagnostic test analysis, including sensitivity, specificity, ROC curves, and the Bayes theorem. Intended for clinical fellows, residents, and investigators, this course also examines models, clinical trials, and treatment effects—including summary statistics, single-, paired-, and two-sample tests, analysis of proportions, and survival data. (2.5 credits) Offered 1997-98 and alternate years.

David P. Harrington, AM, PhD (University of Maryland); Professor of Biostatistics. Nonparametric methods for censored data; sequential designs for clinical trials.

Michael D. Hughes, MSc, PhD (London University); Associate Professor of Biostatistics. Statistical methods in the design, analysis, and reporting of clinical trials and overviews.

Joseph G. Ibrahim, MS, PhD (University of Minnesota); Associate Professor of Biostatistics. Generalized linear models; Bayesian inferences.

Neil S. Klar, MSc, MMath (University of Waterloo), PhD (University of Western Ontario); Assistant Professor of Biostatistics. Clinical trials and the analysis of correlated binary outcome data.

Stephen W. Lagakos, MPhil, PhD (George Washington University); Professor of Biostatistics and Director of the Center for Biostatistics in AIDS Research. Statistical methods arising in AIDS research; clinical trials.

Stuart R. Lipsitz, MS (University of North Carolina), SD (Harvard University); Associate Professor of Biostatistics. Resampling methods; categorical data; longitudinal data; missing data. (On leave until July, 1998)

Kathryn L. Lunetta, MS, PhD (University of Michigan); Assistant Professor of Biostatistics. Statistical issues in human genetics and methodology for mapping genetic markers.

Ian C. Marschner, PhD (La Trobe University, Australia); Assistant Professor of Biostatistics. Statistical methodology for monitoring and predicting the HIV/AIDS epidemic.

Donna S. Neuberg, MA (University of Chicago), MA (State University of New York, Stony Brook), SD (Harvard University); Assistant Professor of Biostatistics. Cancer clinical trials; genetic epidemiology.

Marcello Pagano, SM (University of Florida), PhD (Johns Hopkins University); Professor of Statistical Computing. Statistical computing; clinical trials; epidemic modeling. (On leave until July, 1998)

James M. Robins, MD (Washington University); Professor of Epidemiology and Biostatistics. Development of analytic methods for drawing causal inferences from complex observational and randomized studies with time-varying exposures or treatments.

Andrea G. Rotnitzky, MA, PhD (University of California, Berkeley); Associate Professor of Biostatistics. Longitudinal data analysis, analysis of repeated categorical data and cluster correlated data

Louise M. Ryan, PhD (Harvard University); Professor of Biostatistics. Rodent tumorigenicity experiments; teratology experiments; clinical trials, goodness-of-fit tests, survival analysis.

Donna L. Spiegelman, SM, SD (Harvard University); Associate Professor of Epidemiology and Biostatistics. Binary data models with measurement error and misclassification in model covariates.

Kenneth E. Stanley, MA (Bucknell University), PhD (University of Florida); Lecturer on Biostatistics. Estimating mortality attributable to tobacco in the presence of incomplete information.

Marcia A. Testa, MPH, MPhil, PhD (Yale University); Lecturer on Biostatistics. Design, methodology, measurement, and analytical techniques for evaluation of quality of life indices in therapeutic clinical trials; design and structure of clinical database information management systems.

Florin Vaida, PhD (University of Chicago); Assistant Professor of Biostatistics. Markov chain Monte Carlo; likelihood inference; nonparametric modeling; longitudinal data.

Matthew P. Wand, PhD (Australian National University); Associate Professor of Biostatistics. Nonparametric curve estimation; Markov chain Monte Carlo; computational statistics.

James H. Ware, PhD (Stanford University); Frederick Mosteller Professor of Biostatistics and Acting Dean of the Faculty of Public Health. Design and analysis of longitudinal studies; statistical aspects of environmental health research.

Lee-Jen Wei, PhD (University of Wisconsin); Professor of Biostatistics. Design and analysis of clinical trials; repeated measurements analysis; survival analysis. (On leave until July, 1998)

Milton C. Weinstein, AM, MPP, PhD (Harvard University); Henry J. Kaiser Professor of Health Policy and Management (Health Policy and Management and Biostatistics); Professor of Medicine, Harvard Medical School. Cost-effectiveness of health practices and technologies.

BIO 206st. Statistical Principles in Medical Research (Orav)

Includes concepts in probability and statistics, hypothesis testing, nonparametrics, discrete data analysis, regression and analysis of variance. Emphasizes the design and analysis of clinical studies. Designed primarily for participants in the Program in Clinical Effectiveness. (5 credits)

BIO 210cd. The Analysis of Rates and Proportions (Wypij)

Emphasizes concepts and methods for analysis of data which are categorical, rate-of-occurrence, and time-to-event. Stresses applications in epidemiology, clinical trials, and other public health research. Topics include measures of association, 2X2 tables, stratification, matched pairs, logistic regression, model building, analysis of rates, and survival data analysis using proportional hazard models. (5 credits)

BIO 211cd. Regression and Analysis of Variance in Experimental Research (Marschner)

Covers analysis of variance and regression, including details of data-analytic techniques and implications for study design. Also included are probability models, computing, and the formulation of scientific questions in terms of statistical models. (5 credits)

BIO 212cd. Survey Research Methods in Community Health (Mangione, Laird)

Covers research design, sample selection, questionnaire construction, interviewing techniques, reduction and interpretation of data, and related facets of population survey investigations. Focuses on applying survey methods to problems of health program planning and evaluation. (2.5 credits)

BIO 213ab. Applied Regression for Clinical Research (Orav)

Introduces students involved with clinical research to the practical application of multiple regression analysis. Covers linear regression, logistic regression, and proportional hazards survival models, as well as general concepts in model selection, goodness of fit, testing procedures, and an introduction to underlying likelihood theory. (5 credits)

BIO 214. Principles of Clinical Trials

BIO 214c. (Neuberg)

BIO 214t. (Gelber, Stanley)

Covers types of clinical research, study design, treatment allocation, randomization and stratification, quality control, sample size requirements, patient consent, and interpretation of results, focusing on the scientific, policy, and management aspects of clinical trials. (2.5 credits)

BIO 217t. Linear Regression and Longitudinal Analysis (J. H. Ware, Neuberg)

Introduces multiple linear regression and linear models for longitudinal data. Explains the concepts and principles underlying linear regression analysis, de-

scribes methods for multiple regression analysis, and introduces the use of linear models in the analysis of longitudinal data. (2.5 credits) Not offered 1998.

BIO 219ab. Statistical Methods for Health Policy and Management (Testa)

Introduces probability and statistics, with emphasis on their application to health policy and management contexts. Topics include descriptive statistics, probability and probability distributions, sampling distributions, experimental design and sampling methods, confidence intervals, hypothesis testing and p-values, nonparametric methods, and an introduction to sample linear regression. (5 credits)

BIO 222ab. Basics of Statistical Inference (Wand, Laird)

Introduces probability theory and mathematical statistics underlying techniques in public health research. Topics include probability distributions, means, variances and expected values, finite sampling distributions, parameter estimation, confidence intervals, and hypothesis testing. (5 credits)

BIO 223cd. Applied Survival Analysis and Discrete Data Analysis (Williams)

Covers such topics as parametric distributions, hazard and survivorship functions, estimation of survival distributions, two-population problems, proportional hazard models, accelerated failure time models, tests of proportional hazard assumption, time varying covariates, predicted survival, and useful software. (5 credits)

BIO 224t. Survival Methods in Clinical Research (Davis)

Covers common approaches to display and analysis of survival data, including Kaplan-Meier curves, log rank tests, and Cox proportional hazards regression. Computing, using SAS, is an integral part of the course. (2.5 credits)

BIO 225c. Multiple Regression Analysis for Health Policy and Management (Normand)

Covers the application and interpretation of regression modeling in the context of health policy and management research, with an emphasis on simple linear and multiple regression, including the analysis of variance. Other topics include logistic, Poisson, and proportional hazards regression. (2.5 credits)

BIO 226ab. Applied Longitudinal Analysis (Fitzmaurice)

Introduces modern methods for the analysis of correlated data, repeated measures, correlated outcomes, and longitudinal data. Topics include repeated measures ANOVA, random effects and growth curve models, Hotelling's T², MANOVA, and generalized linear models for correlated data, including generalized estimating equations (GEE). (5 credits)

BIO 228ab. Statistical Models and Methods in Human Genetics (Lunetta, Laird)

Introduces basic methods and algorithms for the analysis of genetic data with an emphasis on gene mapping. Topics include basic human genetics, allele frequency estimation, segregation and linkage analyses, computing likelihoods on pedigrees, nonparametric linkage tests, polygenic and multifactorial models, variance component analysis, and association tests. (5 credits)

BIO 230ab. Probability Theory and Applications (L. Ryan)

Covers such topics as axiomatic foundations, frequency and personal concepts of probability, combinatorics, discrete and continuous sample spaces, independence and conditional probability, random variables, expectation operator, moments, generating functions and characteristic functions, standard distributions, transformations, sampling distributions related to the normal distribution, convergence concepts, weak and strong laws of large numbers, the central limit theorem, and elements of stochastic processes. (5 credits)

BIO 231cd. Statistical Inference I (Betensky)

Discusses principles of data reduction, describes methods of point and interval parameter estimation and the small and large sample properties of estimators, and covers methods of hypothesis testing and optimality properties of tests. (5 credits)

BIO 232ab. Methods I (Xu)

Introduces parametric and nonparametric methods for continuous outcomes, including one- and two-sample t-tests, linear rank tests, correlation, ANOVA, linear regression, and basic design of experiments. Other topics include the examination of exploratory data analysis and robust estimation. (5 credits)

BIO 233cd. Methods II (Klar)

Focuses on analysis of categorical and count data and introduces methods for analysis of survival data. Covers sampling plans, analysis of contingency tables, construction of confidence intervals and hypothesis tests, measures of association, logistic regression, and log-linear analysis. Includes survival topics such as estimation of survival distributions, comparison of groups, and regression models. (5 credits)

BIO 235cd. Regression and Analysis of Variance (De Gruttola)

Describes procedures of estimation and hypothesis testing for linear models and discusses techniques of analysis of variance and experimental design. (5 credits)

BIO 242a. Resampling Methods (Gray)

Describes resampling-based inference techniques, including the bootstrap, jackknife, and related methods. Other topics include applications to variance estimation and hypothesis testing, Edgeworth-Fisher and Cornish-Fisher expansions, bootstrap confidence

intervals, applications to regression problems, and prediction error and cross validation. (2.5 credits) Not offered 1997-98.

BIO 243a. Nonparametric Methods (Wypij)

Introduces nonparametric methods, including permutation tests, permutation limit theorems, 2-sample tests and their asymptotic efficiency, k-sample tests, 1-sample tests of location, rank tests for symmetry, and independence. (2.5 credits) Offered 1997-98 and alternate years.

BIO 244ab. Analysis of Failure Time Data (Lagakos)

Discusses the theoretical basis of concepts and methodologies associated with survival data and censoring, nonparametric tests, and competing risk models. Much of the theory is developed using counting processes and martingale methods. (5 credits)

BIO 245cd. Analysis of Multivariate and Longitudinal Data (Laird)

Presents classical and modern approaches to the analysis of multivariate observations, repeated measures, and longitudinal data. Topics include the multivariate normal distribution, estimation of the mean and covariance matrix, Hotelling's T^2 , MANOVA, the multivariate linear model, and random effects and growth-curve models. Also discusses computational issues for traditional and new methodologies. (5 credits)

BIO 246cd. Advanced Statistical Models

Focuses on nonlinear statistical models, including univariate nonlinear and generalized linear models and multivariate extensions. Topics include iteratively reweighted least squares estimation methods, linear, quadratic and other estimating equations, and effects of model misspecification and robustness. (5 credits) Not offered 1997-98.

BIO 247cd. Design of Scientific Investigations (Zelen)

Covers aspects of statistical theory and practice relevant to the design of health-related scientific investigations. Topics include sample size considerations, basic principles of experimental design, block designs, factorial experiments, response surface modeling, clinical trials, adaptive designs, cohort studies, early detection trials, and double-sampling techniques. (5 credits) Not offered 1997-98.

BIO 248cd. Advanced Statistical Computing (Gray)

Presents computing algorithms useful in statistical research and advanced applications. Topics include computer arithmetic, matrix algebra, numerical optimization methods with application to maximum likelihood estimation and GEEs, spline smoothing and penalized likelihood, numerical integration, and random number generation and simulation methods. (5 credits) Offered 1997-98 and alternate years.

Paige L. Williams, BSPH, PhD (University of North Carolina); Associate Professor of Biostatistics. Cancer risk assessment and other areas of environmental statistics, especially animal carcinogenicity bioassays.

David Wypij, ScM (Brown University), MS, PhD (Cornell University); Associate Professor of Biostatistics. Longitudinal data analysis; repeated measures and growth curve models; discrete data.

Ronghui (Lily) Xu, MA, PhD (University of California, San Diego); Assistant Professor of Biostatistics. Survival analysis, particularly in relation to proportional hazards models; goodness of fit.

Marvin Zelen, AM (University of North Carolina), PhD (American University); Professor of Statistical Science; Member of the Faculty of Arts and Sciences. Theory and practice of clinical trials; methodology for early detection of disease.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School.

Roger B. Davis, MA (University of Rochester), SD (Harvard University); Assistant Professor in the Department of Biostatistics. Design and analysis of clinical trials; recursive partitioning methods.

Dianne M. Finkelstein, AM (Wayne State University), PhD (University of Michigan); Associate Professor in the Department of Biostatistics. Carcinogenicity experiments; survival analysis; statistical methods for AIDS clinical trials and epidemiology.

Richard D. Gelber, SM (Stanford University), PhD (Cornell University); Professor in the Department of Biostatistics. Design and analysis of clinical trials.

Rebecca S. Gelman, PhD (State University of New York at Buffalo); Associate Professor in the Department of Biostatistics. Clinical trials; disease screening; survival methods.

Robert J. Glynn, MA (Boston College), PhD (Brandeis University), SM, SD (Harvard University); Associate Professor in the Department of Biostatistics. Analysis of longitudinal data; nonresponse in sample surveys; epidemiology of eye diseases.

Jonathan L. Haines, PhD (University of Minnesota); Associate Professor in the Department of Biostatistics. Linkage analysis in common and complex disease; human neurodegenerative disease; human eye disease

Mel-Ling Ting Lee, MS (National Tsing-Hua University), MA, PhD (University of Pittsburgh); Assistant Professor in the Department of Biostatistics. Lifetime data analysis, categorical data analysis.

Sharon-Lise T. Normand, MSc (University of Western Ontario), PhD (University of Toronto); Assistant Professor in the Department of Biostatistics. Bayesian inference; graphical models; meta-analysis.

E. John Orav, PhD (Stanford University); Associate Professor in the Department of Biostatistics. Statistical computing and simulation; stochastic modeling; bioassay.

Bernard A. Rosner, MA (Stanford University), PhD (Harvard University); Professor in the Department of Biostatistics. Analysis of clustered binary data; longitudinal data analysis.

David A. Schoenfeld, AM, PhD (University of Oregon); Associate Professor in the Department of Biostatistics. Statistics in medical research; linear models; bioassay; survival theory.

Grace Wyshak, SM (Harvard University), PhD (Yale University); Associate Professor in the Departments of Biostatistics and Population and International Health. Biostatistical and demographic methods; women's reproductive health.

Adjunct Faculty

Constantine A. Gatsonis, MS, PhD; Associate Professor, Department of Community Health, Brown University.

Cyrus R. Mehta, SM, PhD; President, Cytel Software Corporation.

DeJuran Richardson, MS, PhD; Associate Professor of Mathematics, Lake Forest College.

Nicholas J. Schork, MA, MA, PhD; Assistant Professor, Department of Genetics, Case Western Reserve University.

Michael A. Stoto, AM, PhD; Director, Division of Health Promotion and Disease Prevention, Institute of Medicine, National Academy of Sciences.

BIO 249ab. Bayesian Methodology in Biostatistics (Ibrahim)

Introduces the fundamentals of the Bayesian paradigm including Bayes' theorem, the likelihood principle, prior distributions, posterior distributions, and predictive distributions. Topics include Bayesian analysis of linear models, generalized linear models, survival models, random effects models, Bayesian methods in meta-analysis, and designing and analyzing clinical trials. (5 credits) Offered 1997-98 and alternate years.

BIO 251cd. Statistical Inference II (Wand)

Considers asymptotic theory and theories of optimality. Topics include limit theorems, multivariate delta method, properties of maximum likelihood estimators, asymptotic properties of generalized methods of moments estimators, semiparametric efficient estimation, asymptotic relative efficiency, and hypothesis tests. (5 credits)

BIO 262ab. Statistical Problems in Drug Development

Introduces applications of statistical methodology required for the various phases of pharmaceutical drug development. Features guest lecturers from the pharmaceutical industry. (2.5 credits) Not offered 1997-98.

BIO 263cd. Computational Methods for Categorical Data Analysis (Mehta)

Studies nonparametric and semiparametric statistical methods of inference for a variety of problem types, with an emphasis on the development of efficient numerical algorithms for exact and Monte Carlo inference. (2.5 credits) Offered 1997-98 and alternate years.

BIO 266d. Design and Analysis of Animal Bioassay (L. Ryan, Catalano, Williams)

Provides a foundation for methodologic research in bioassay design and analysis. Emphasizes statistical issues in rodent carcinogenicity, developmental toxicity, and neurotoxicity bioassays. (2.5 credits) Offered 1997-98 and alternate years.

BIO 268ab. Statistical Methods in Human Genetics (Lunetta, Laird)

Introduces statistical procedures for investigating the inheritance of human characteristics through studies of families and populations. Focuses on segregation, linkage, and DNA sequence analysis. (2.5 credits) Offered 1997-98 and alternate years.

BIO 269cd. Statistical Methods in Psychiatry (Normand)

Covers assessment of inter-rater reliability, analysis of repeated measures experiments, methods for handling dropouts and missing data, measurement error models, ROC curves, and methods of segregation and linkage analyses. (2.5 credits) Not offered 1997-98.

BIO 270ab. Statistical Science Outreach (Zelen)

Aims to broaden the background of students in probability and statistics. Students give short presentations from expository articles and papers chosen on the basis of ideas rather than technical content. (2.5 credits) Offered 1997-98 and alternate years.

BIO 271ab. Statistical Computing Environments (Laird, Horton)

Acquaints students with modern computing environments in the field of biostatistics. Topics include programming environments in statistics, algorithmic and symbolic mathematics, source language programming and its tools, editors, typesetters, Internet tools, and Unix. (2.5 credits)

BIO 273ab. Sample Surveys (Laird, Zaslavsky)

Covers methods for design and analysis of sample surveys, including questionnaire design and evaluation. Topics in estimation methods include calculation and use of sampling weights, and variance estimation methods. (2.5 credits)

BIO 274cd. Applied Stochastic Processes and Models in Public Health (Zelen)

Aims to develop aspects of stochastic processes that are relevant for modeling important problems in public health. Topics include Poisson processes, birth and death processes, Markov chains and processes, and semi-Markov processes. (5 credits)

Independent Study

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research or undertake special projects in the following areas: statistical methods; teaching of biostatistics; consultation; computing; study design; and data analysis.

Department of Cancer Biology

Investigations under way in the Department of Cancer Biology include the role of viruses in the cause of cancer; RNA tumor viruses as causes of leukemia, lymphomas, other tumors, and immunosuppressive disorders of animals and humans; pathogenesis of AIDS and characterization of the family of retroviruses associated with this disease; gene regulation and genetic events associated with the induction of leukemia and immunosuppressive disease; activation of proto-oncogenes and loss of tumor suppressors in carcinogenesis; cytogenetic effects of physical and chemical carcinogens, induction of mutations, and malignant transformation in mammalian cells by low and high LET radiations and chemical agents; mechanisms of mutagenesis and DNA recombination; and precise changes in DNA sequences produced by radiation and chemical carcinogens.

As described below, the department offers two doctoral programs. The program leading to the Doctor of Science (SD) degree is designed for candidates holding a clinical degree (MD, DVM, DMD). The Doctor of Philosophy (PhD) program is designed for all other candidates, who enter through the Biological Sciences in Public Health Program (a component of the Division of Medical Sciences, Graduate School of Arts and Sciences). Both programs feature areas of interest in cancer cell biology, virology, and immunology.

Faculty in the Department of Cancer Biology are primarily involved in research into the causes of cancer, though substantial attention is also given to the study of AIDS and other retroviral diseases. Research programs emphasize cancer cell biology, viral oncology, and chemical and physical carcinogenesis; epidemiology, biology, and vaccinology of AIDS, hepatitis, and retrovirus-induced leukemias and neurological diseases; and genetic regulation of the immune response, molecular mechanisms of regulation of class II genes, and the function and regulation of T-cell-derived cytokines.

Doctor of Science in Cancer Biology

The Doctor of Science (SD) program is designed to prepare students for postdoctoral research fellowships, junior faculty positions at academic institutions, and positions in independent research institutes, in governmental agencies, and in the biotechnical industry.

Applicants to the SD program must hold a clinical degree in either medicine, veterinary medicine, or dentistry. A background in biology, molecular biology, medicine, or biochemistry is preferred. A limited number of training grant positions may be available to Cancer Biology students through governmental programs.

Professor Max Essex heads both the Department of Cancer Biology and the Harvard AIDS Institute. His research centers on the human retroviruses HIV-1, HIV-2, and HTLV-1.

For more information about the SD program in Cancer Biology or about any other aspect of the department, please contact Jacqueline G. Breen, Associate Coordinator, Department of Cancer Biology, 651 Huntington Avenue, Boston, MA 02115. Phone: 617-432-1023 Fax: 617-739-8348 E-mail: jbreen@sph.harvard.edu

For application materials and information about admission to the PhD program, please contact the Division of Medical Sciences, Harvard Medical School, 260 Longwood Avenue, Room 435, Boston, MA 02115. Phone: 617-432-0162

Applicants who have specific questions about the PhD program may contact Ruth Kenworthy, Division of Biological Sciences, 665 Huntington Avenue, Boston, MA 02115. Phone: 617-432-4470 Fax: 617-432-4098 E-mail: kenworthy@cblab.harvard.edu

Faculty

Department Chair: Myron E. (Max) Essex, DVM, SM (Michigan State University), PhD (University of California, Davis); Mary Woodard Lasker Professor of Health Sciences and Chairman of the Harvard AIDS Institute. Role of retroviruses as infectious agents in human leukemias and AIDS; mechanisms of immunosuppression by retroviruses; identification and characterization of retroviral proteins for seroepidemiologic and diagnostic value and for vaccine development; hepatitis B virus and human liver cancer.

Laurie H. Glimcher, MD (Harvard University); Irene Heinz Given Professor of Immunology; Professor of Medicine, Harvard Medical School. Genetic regulation of the immune response; the role of Ia (class II) major histocompatibility complex molecules and T-cell receptor proteins in T-lymphocyte activation; molecular mechanisms of regulation of the class II genes; function and regulation of the T-cell-derived cytokine interleukin-4.

This program aims to develop the basic skills in laboratory techniques and data handling necessary for undertaking original research. Course work during the first one to two years emphasizes cancer biology, cellular and molecular biology, virology, immunology, radiation biology, and genetics. Required courses for all concentrations include school-wide requirements in epidemiology (EPI 200 or EPI 201a) and intermediate biostatistics (BIO 210cd or BIO 211cd), as well as appropriate courses for one major (20 credits) and two minor fields (10 credits each). Electives are chosen according to students' needs and interests. Courses may be taken at Harvard Medical School, the Graduate School of Arts and Sciences, and MIT, as well as at HSPH.

Students are encouraged to participate in the numerous seminar series and informal discussion groups offered on the Longwood campus. The department emphasizes publication of research results in the standard research literature, and most doctoral students publish several papers before completing the degree. Students must pass the school-wide oral qualifying examination and must complete, defend, and submit a thesis based on intensive laboratory research under the guidance of a faculty advisor in the student's area of concentration. The three main areas of interest are as follows:

Cancer Cell Biology This area is designed for individuals who plan to hold positions in teaching or research that relate to cancer biology and prevention. The program emphasizes physical and chemical carcinogenesis, including radiation biology. Students take courses in cancer biology, cell biology, and other relevant fields.

Virology This area is designed to train a future generation of experts for new developments in the pathogenesis and prevention of AIDS and other infectious diseases. At present the program emphasizes the epidemiology, biology, and

Before coming to HSPH, Abdoulaye Dieng Sarr earned a PhD in clinical pharmacology and microbiology in Senegal. "While working in the lab for that degree," he says, "I got interested in infectious disease. After I graduated, I went to work as a field coordinator for the AIDS/STD sentinel surveillance unit, part of the Senegal national AIDS control program. It soon became apparent that I would be more effective if I had

more knowledge of immunology and molecular biology.

"I met [associate professor] Phyllis Kanki in Senegal while working on a collaborative project with HSPH. What she told me of the training program and research at the school sounded interesting. I came for a year as a postdoctoral research fellow and liked what I found. The next year, I enrolled as a doctoral student."

After he graduates, Abdoulaye plans to return to Senegal to continue his research and the fight against HIV and AIDS.

vaccinology of AIDS as an example of a complex infectious disease, as well as hepatitis and retrovirus-induced leukemias and neurological diseases. Students take courses in virology, vaccine development, and related fields.

Immunology This area is designed for individuals who plan to hold positions in teaching or research in immunology. Graduates ordinarily assume positions as faculty members and research scientists at medical schools, research institutes, and schools of public health. The curriculum currently focuses on genetic regulation of the immune response, molecular mechanisms of the regulation of class II genes, and the function and regulation of T-cell-derived cytokines. Students take courses in cell biology, immunology, and molecular immunology.

Doctor of Philosophy in Biological Sciences in Public Health (BPH) (Cancer Biology)

Students wishing to study cellular and molecular biology or physiology as they pertain to major problems in public health should apply to the Biological Sciences in Public Health program. This program offers the PhD degree through Harvard University's Graduate School of Arts and Sciences, Division of Medical Sciences, Committee on Biological Sciences in Public Health.

The program offers a firm foundation in the basic biomedical sciences, as well as in epidemiology and biostatistics. Specific courses supplement this core, as dictated by individual research concentrations; students affiliated with the Department of Cancer Biology may choose to concentrate in cancer cell biology, immunology, or virology. Students in this program engage in laboratory rotations in three different research areas to enable them to assess realistically their interests in a thesis project and to evaluate the suitability of the laboratory and the mentor. At the completion of these rotations, students select an area of interest and a thesis research laboratory and complete the required curriculum. A qualifying examination must be passed before engaging in thesis work, and the thesis must be defended before the granting of the PhD. Some students also participate in the Harvard-Markey Biomedical Scientist Training Program, which is designed to offer PhD students a greater knowledge of human biology and disease.

Applicants generally have a bachelor's degree and demonstrated competence in organic and biological chemistry, general biology, physics, and calculus. Those deficient in one of these areas may be admitted provisionally on the condition that appropriate courses will be taken before and/or after entering the program. Applicants must take both the GRE general and subject tests by October in order to meet the application deadline of December 15.

All students admitted to the program receive a stipend and tuition support. Students are encouraged to apply for fellowships from outside sources since certain external fellowships provide higher stipends. While funds to support international students are limited, one special scholarship is available each year for a student from a developing, sub-Saharan African country. There is also a university-wide fellowship program that provides funding to qualified underrepresented minority students in the sciences.

Graduates ordinarily assume positions as faculty members and research scientists at medical schools, research institutes, and schools of public health. Career opportunities in the biological sciences as they apply to public health are

Interdisciplinary Program in Infectious Disease

Education and research on infectious disease is available through the Interdisciplinary Program in Infectious Disease. Students in this program fulfill the departmental requirements for doctoral students with additional coursework in biology, quantitative methods, and infectious disease. For more information on this program, see page 5.

expected to grow both in academia and in the biotechnology and pharmaceutical industries.

Courses Offered by the Department of Cancer Biology, 1997-98

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1998 summer sessions).

ID 211d. Vaccines: Past, Present, and Future (T.H. Lee, Essex)

Covers such topics as methodology for new vaccine development; manufacturing and quality control; techniques to ensure appropriate use of vaccines; liability issues; cost-effectiveness analysis; decision analysis for future research, development, and distribution of vaccines; and epidemiology of vaccine-preventable illness. (2.5 credits)

CB 204ab. Survey of Immunobiology (Grusby)

Examines the anatomy and physiology of the immune system, fate of antigen, cell trafficking, cellular interactions, regulation of the immune response, and B- and T-cell recognition mechanisms. (5 credits) Offered 1997-98 and alternate years.

CB 207ab. Radiation Biology (Little)

Examines the biological effects of ionizing radiation, particularly as radiation serves as a model for the genotoxic and carcinogenic effects of environmental chemicals. Covers cellular and molecular processes as well as effects in humans. Emphasizes human epidemiologic data for radiation carcinogenesis and their use in risk analysis. (5 credits) Not offered 1997-98.

Michael J. Grusby, PhD (Northwestern University); Associate Professor of Molecular Immunology. Molecular and genetic analysis of cytotoxic T-lymphocyte-mediated lysis; generation of in vivo models of immune deficiency by homologous recombination in embryonic stem cells.

Phyllis J. Kanki, DVM (University of Minnesota), SD (Harvard University); Associate Professor of Pathobiology. Pathobiology of a number of human and simian retroviruses, including HTLV-1, STLV-1, SIV, HIV-1, and HIV-2; characterization of the immune response to various viral antigens and their correlation to stage of infection or disease.

Karl T. Kelsey, MD (University of Minnesota), MOH (Harvard University); Associate Professor of Occupational Medicine (Environmental Health) and Associate Professor of Radiobiology (Cancer Biology). Occupational and environmental carcinogenesis, with emphasis on the study of workplace mutagen and carcinogen exposure, using epidemiological application of cytogenetic and molecular endpoints.

Tun-Hou Lee, SM, SD (Harvard University); Professor of Virology. Humoral response to retroviral infections in humans; identification of coding sequences of human retroviruses and their gene products; evaluation of the relative immunogenicity of retroviral peptides for serodiagnosis and vaccine development.

Howard L. Liber, PhD (Massachusetts Institute of Technology); Associate Professor of Radiobiology. Development and utilization of cellular and molecular methods to investigate mutagenesis in human cells, from both mechanistic and environmental perspectives.

John B. Little, MD (Boston University); James Stevens Simmons Professor of Radiobiology and Director of the Kresge Center for Environmental Health. Radiation biology and experimental carcinogenesis; cellular studies of transformation, mutagenesis, and cytogenetic damage in vitro; molecular mechanisms of mutagenesis and oncogene expression; genetic susceptibility to cancer in human populations.

Phyllis Kanki, associate professor of pathobiology, examines the nucleotide sequence of an AIDS virus

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School.

Martin S. Hirsch, MD (Johns Hopkins University), Professor in the Department of Cancer Biology. Pathogenesis and therapy of human retrovirus and herpesvirus infections.

Joseph G. Sodroski, MD (Jefferson Medical College), Associate Professor in the Department of Cancer Biology. Human immunodeficiency virus pathogenesis, viral envelope glycoproteins and antiviral immune response.

CB 212ab. Introduction to Cancer Biology

Emphasizes current experimental approaches to studying cancer biology and the process of carcinogenesis. Topics include the biology of cell modification and differentiation, the phenotype of the cancer cell, properties of human and animal cancers, the process of cell transformation, mutagenesis, carcinogen metabolism, and cancer epidemiology. (5 credits) Not offered 1997-98.

CB 222d. The AIDS Epidemic: Status, Dynamics, Prospects, Conflicts (Kanki, Essex)

Deals with a broad range of topics relating to the public health implications of the AIDS epidemic, including the virology, therapy, vaccines, and etiologic hypotheses concerning the origins of the virus. Topics include the dynamics of the epidemic, public policy issues, economic implications, and social support needs. (1.25 credits)

CB 223d. Design and Development of an AIDS Vaccine (Essex, T.H. Lee)

Brings together information on disease pathogenesis, the use of modern biomedical technology to design a vaccine antigen, and guidelines needed for vaccine safety and efficacy testing for a chronic infectious agent such as HIV. (2.5 credits)

Independent Study

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research or to undertake specialized readings or studies in the following areas: (a) viruses: isolating and identifying representative viruses by use of cell culture, animal inoculation, and serologic and molecular techniques; (b) current topics in radiobiology at the molecular, cellular, and organismal levels; (c) immunochemical methods, including immunofluorescence, chromatography, and enzyme-linked immunoassays; (d) methods and interpretation of chemical carcinogenesis; (e) research in applied immunology; (f) diagnostic service in bacteriology, virology, and congenital metabolic disorders; and (g) field studies on arboviruses.

Department of Environmental Health

The Department of Environmental Health focuses on complex problems that require the insights of many specialties. The department's faculty, research staff, and students reflect the multidisciplinary nature of the field and include chemists, engineers, epidemiologists, applied mathematicians, physicians, occupational health nurses, physiologists, cell biologists, molecular biologists, and physicists. Teaching and research activities of the department are carried out through four main concentrations: Environmental Epidemiology, Environmental Science and Engineering, Occupational Health, and Physiology, as described below.

The Department of Environmental Health is concerned with the detection and prevention of adverse health effects caused by chemical and physical factors in occupational and community settings in the United States and around the world.

Environmental Epidemiology

Environmental epidemiology focuses on identifying and measuring the influence of environmental factors (physical, chemical, and biologic) on human disease in a community, providing scientific evidence for sound environmental and health policies. The research program integrates epidemiologic methods with techniques borrowed from other fields to assess environmental health risks, including the cognitive and cardiovascular effects of lead; the effects of petrochemical exposures on reproductive outcomes; the effects of air pollution on respiratory and cardiovascular health; the effects of infectious agents and disinfection by-products in drinking water; and biomarkers of environmental exposure. The concentration has ties with policy makers in the US and abroad, and has research and training projects under way around the globe.

The degree programs in this area prepare students for research careers in environmental epidemiology. Recent graduates hold positions in academic institutions, in government agencies, and as private consultants. Financial support for Environmental Epidemiology students may be available to US citizens and permanent residents through NIH-sponsored training grants.

As described below, the Environmental Epidemiology concentration offers both a four-semester and a two-semester Master of Science (SM) program in Environmental Health, as well as a program leading to the Doctor of Science (SD) degree. The program collaborates with the Department of Epidemiology for students seeking an SD in Epidemiology with a focus on environmental health. Please see page 9 for infor-

Engineering Supervisor George Allen and doctoral student Annie Oh monitor atmospheric ozone levels in South Boston.

For more information about research and training in Environmental Epidemiology, please contact Douglas W. Dockery, SD, Department of Environmental Health, 665 Huntington Avenue, Boston, MA 02115. Phone: 617-432-0729 Fax: 617-277-2382 E-mail: dockery@sparc6b.harvard.edu

Faculty

Department Chair: Joseph D. Brain, SM, SM, SD (Harvard University); Cecil K. and Philip Drinker Professor of Environmental Physiology. Function and structure of pulmonary macrophages, deposition and clearance of inhaled particles and responses to them; aerosols as probes of pulmonary function

Harriet A. Burge, MA (San Francisco State University), PhD (University of Michigan); Associate Professor of Environmental Microbiology. Aerobiology; bioaerosols in indoor air, including sampling, analysis, and health effects; fungus allergen ecology, characterization, prevalence, and health effects.

James P. Butler, AM, PhD (Harvard University); Lecturer on Physiology. Lung structure and function; parenchymal micromechanics; magnetic twisting cytometry; nemoendocrinology; avian physiology.

David C. Christiani, MD (Tufts University), SM, MPH (Harvard University); Professor of Occupational Medicine and Epidemiology and Director of the Educational Resource Center for Occupational Safety and Health; Professor of Medicine, Harvard Medical School. Occupational diseases; biomarkers and molecular epidemiology.

Douglas W. Dockery, SM (Massachusetts Institute of Technology), SM, SD (Harvard University); Associate Professor of Environmental Epidemiology; Associate Professor of Medicine (Epidemiology), Harvard Medical School. Epidemiologic studies of respiratory health effects of air pollution, influence of environmental exposures on lifetime development of respiratory disease.

mation about the Master of Public Health concentrations in Occupational and Environmental Health and in Quantitative Methods.

Master of Science in Environmental Health (four-semester program)

The master's programs in Environmental Epidemiology provide students with basic skills in environmental exposure assessment and epidemiologic methods, in preparation for research or academic careers. The four-semester (80-credit) SM program is designed for individuals who hold a bachelor's degree and have strong quantitative skills.

Required courses include EPI 201a, *Introduction to Epidemiology*; EPI 202, *Elements of Epidemiologic Research*; EPI 203c, *Design of Case-Control and Cohort Studies*; EPI 204d, *Analysis of Case-Control and Cohort Studies*; EPE 215, *Environmental and Occupational Epidemiology*; EHE 268b, *Respiratory Epidemiology*; and BIO 210cd, *The Analysis of Rates and Proportions*. Students are encouraged to participate in research seminars within the Environmental Epidemiology program and affiliated groups.

Master of Science in Environmental Health (two-semester program)

Like the four-semester program, the two-semester (40-credit) SM program in Environmental Epidemiology provides students with basic skills in exposure assessment and epidemiologic methods, in preparation for research or academic careers. The required courses are the same as for the four-semester SM. The remainder of the schedule reflects areas of specific interest to the students. The two-semester program is open to applicants with a medical degree or a master's degree in a related scientific discipline. Students may enroll on a part-time basis, completing the program over two years.

Doctor of Science in Environmental Health

Applicants to the SD program in Environmental Epidemiology should have a master's degree in environmental health, epidemiology, or biostatistics, as well as strong quantitative skills. Doctoral students must fulfill the course require-

ments for a major in environmental health (20 credits) plus a minor in epidemiology (10 credits) and one other field (10 credits). In addition, they must pass a written departmental comprehensive examination, pass the school-wide oral qualifying examination, and complete, defend, and submit a thesis. The thesis consists of several publishable papers reporting epidemiologic studies of environmental exposures.

Students interested in a research career are encouraged to apply to the doctoral program in Epidemiology with a minor in Environmental Health. Candidates for an SD in Epidemiology must meet all of the requirements of that department.

Doctoral students may receive financial support through research assistantships. Some financial support for US citizens and permanent residents may be available through NIH traineeships.

Environmental Science and Engineering

The concentration in Environmental Science and Engineering emphasizes the chemical, physical, microbiological, engineering, and risk assessment aspects of environmental and occupational exposures. Concentration faculty measure and model ambient, indoor, and personal exposures to environmental and workplace contaminants; develop instruments and methods for collecting, analyzing, and assessing the effects of physical, chemical, and biological factors; conduct risk evaluations of new products, fuels, water supplies, technologies, and remediation strategies. Collaborative teaching and research is conducted throughout the world, including Mexico, Chile, China, Russia, Slovakia, India, Korea, Taiwan, Japan, the Netherlands, and Germany.

Students in this concentration take the following core courses: EH 205ab, *Human Physiology*; EHH 240a, *Risk Assessment*; EHH 242c, *Regulatory Toxicology*; EH 263cd, *Analytical Chemistry and Exposure Assessment*; EH 292a, *Air Pollution: Properties of Gases and Particles*; EH 294c, *Air Pollution: Atmospheric Dispersion Modeling*; EPE 215, *Environmental and Occupational Epidemiology*; BIO 201ab, *Introduction to Statistical Methods*; and EPI 201a,

Additional Areas of Interest

The Department of Environmental Health offers these areas of interest to provide additional, in-depth research and training opportunities.

Environmental Molecular Epidemiology

This area is for those students interested in the application of molecular methods to environmental epidemiologic studies for the measurement of exposure, disease susceptibility, or disease outcome. This area of interest has a curriculum based in occupational and environmental health and augmented by the study of biomarkers, epidemiologic methods, physiology, exposure assessment, and molecular biology.

Occupational Epidemiology

Students who are interested in the epidemiology of occupational disease and injury may elect to pursue training in this area by applying themselves to a curriculum that includes courses in epidemiology, exposure assessment, occupational health, biostatistics, and toxicology. This area has an emphasis on the application of biomarkers to occupational health and in statistical modeling of exposure-response relationships.

Occupational Ergonomics and Safety

This specialty area links the engineering approach to occupational hazard control with the public health approach to occupational injury and illness prevention. The curriculum prepares graduates to identify and evaluate ergonomic and safety risks in the workplace; identify and evaluate the occurrence of work-related musculoskeletal injury and illness; develop administrative and engineering controls in the design of equipment, work tasks, and workplaces; and develop and evaluate policies and programs for the prevention of musculoskeletal injuries and illnesses.

Population Genetics

This is a multidisciplinary field, integrating aspects of genetics, epidemiology, statistics, biology, and medicine. Complex diseases such as asthma, cancer, diabetes, hypertension, neurological disorders, and coronary heart disease are considered, utilizing genetic data from human populations and families.

Students who pursue this area of interest participate in broad-based, comprehensive research which includes gene-mapping to identify the genetic loci and variants responsible for the genetic contribution to complex disease; studies of gene-environmental interaction to investigate the relative contributions of genetic and environmental factors in disease manifestation; mutation and allele frequency studies to investigate the distribution of disease-predisposing factors in the population at large; gene assessment to investigate the role of a particular (candidate) gene in disease pathogenesis; and clinical trials to confirm pharmacological intervention and public health prevention.

Water Pollution

Students seeking in-depth training in water quality issues, including transmission of waterborne disease, toxicological concerns, and water and wastewater treatment strategies, may want to consider this area of interest. Faculty research interests include survival and proliferation of pathogens in drinking water, microbial interactions with pollutants, pollutant fate and transport in aquatic ecosystems, and toxicity of disinfection by-products. International issues, especially those of developing countries, are emphasized. The recommended curriculum includes courses at HSPH, MIT, and in Harvard's Faculty of Arts and Sciences and Kennedy School of Government.

Interdisciplinary Program in Infectious Disease

Education and research on infectious disease is available through the Interdisciplinary Program in Infectious Disease. Students in this program fulfill the departmental requirements for doctoral students with additional coursework in biology, quantitative methods, and infectious disease. For more information on this program, see page 5.

For more information about research and training in Environmental Molecular Epidemiology, please contact Karl T. Kelsey, MD, MOH, Department of Environmental Health, 665 Huntington Avenue, Boston, MA 02115.

Claire M. Doerschuk, MD (Rush Medical College); Mark and Catherine Winkler Associate Professor of Physiology and Cell Biology. Transit of leukocytes through normal pulmonary microvasculature and the response of leukocytes to inflammatory stimuli within the lungs.

John S. Evans, SM (University of Michigan), SM, SD (Harvard University); Senior Lecturer on Environmental Science. Assessment of human exposures to pollutants; evaluation of uncertainty; application of decision analysis; assessment of health risk from waste disposal and energy production.

Professor Douglas Dockery is one of the HSPH faculty members involved with the Six Cities Study, a twenty-three-year-old air-quality research project. Here, Dockery is pictured with sampling equipment in South Boston.

and water quality, exposure and risk assessment, and radiological health, providing research opportunities for both master's and doctoral students.

Doctoral students in Environmental Health Sciences are typically funded either fully or partially by the program through research assistantships or training grant fellowships.

Environmental Science and Risk Management This area is offered jointly by the Department of Environmental Health and the Department of Health Policy and Management. Providing students with an integrated education in environmental science, risk analysis, and decision making, this area is designed for students interested in pursuing professional and research careers in risk assessment and management in the private or public sector. The SM program is directed toward the growing number of students interested in pursuing careers dedicated to solving problems at the interface between environmental science and public policy. The SD degree prepares students for either professional or research careers.

The curriculum includes course work in both the environmental sciences (for example, human physiology, risk assessment and regulatory toxicology, analytic chemistry and exposure assessment, and environmental and occupational epidemiology) and in the decision sciences (for example, decision, cost-effectiveness, and cost-benefit analysis, and environmental and resource economics). These core requirements are supplemented by required courses in biostatistics and electives in environmental policy, law, and management. Although a thesis is not required for the SM degree, each student is expected to complete a practicum in environmental risk and decision analysis.

Introduction to Epidemiology. Advanced courses in environmental science are oriented toward a specific pollutant or medium (such as air, surface water, or groundwater); they may focus on monitoring, modeling, or the control of the pollutants, or they may emphasize resources and occupational management, regulation, and policy. Most students also take courses at the John F. Kennedy School of Government and at MIT. Students specialize in one of the following areas of interest, each of which has additional course requirements.

Environmental Health Sciences This area is designed for those interested in identifying and characterizing human and ecological exposures to environmental contaminants. It provides training in air and water environments, environmental microbiology (both aquatic and aeroallergens), radiological health, hazardous and solid waste, exposure assessment, and pollution prevention. Graduates take positions in government agencies, such as the Environmental Protection Agency, in industry, and as consultants. Doctoral graduates also take positions in academia.

In addition to the general core requirements, areas of interest have specific course requirements plus 10 credits of related electives. Faculty members associated with the Environmental Science and Engineering concentration conduct large national and international research projects in air

Doctoral students in this area are typically either partially or fully funded through research assistantships or training grant fellowships.

Industrial Hygiene and Occupational Safety

This area is designed for those interested in the anticipation, identification, evaluation, and control of occupational hazards. Graduates take positions at local and federal agencies, such as NIOSH, at private companies with occupational health programs, or at research institutions and universities investigating occupational hazards. Doctoral graduates often fill faculty posts at schools of public health.

Faculty research in Industrial Hygiene and Occupational Safety spans a variety of areas, including retrospective exposure assessment for epidemiologic studies of lung cancer risk from man-made vitreous fibers and of kidney cancer risk from aliphatic hydrocarbons; physiologic and behavioral determinants of exposure avoidance by arc welders; toxicokinetic modeling of exposure-dose relationships; and petroleum hydrocarbon exposures associated with adverse effects on reproductive function.

In addition to the general core requirements, areas of interest have specific course requirements. (Those participating in the internship program or specializing in hazardous waste are subject to slightly different requirements.)

Students in the four-semester program who have limited work experience are encouraged to take a three- or six-month internship between their first and second years of study. Interns work under the supervision of a professional industrial hygienist in a private company or research setting to evaluate occupational hazards and develop applied research skills.

Tuition support may be available through a NIOSH Educational Resource Center Grant for highly qualified US citizens or permanent residents concentrating in Industrial Hygiene and Occupational Safety. Support for these students may also be obtained through fellowship programs offered by the Department of Energy or by the Oak Ridge Institute for Science and Education.

As described below, the Environmental Science and Engineering concentration offers both a four-semester and a two-semester Master of Sci-

ence (SM) program in Environmental Health, as well as a program leading to the Doctor of Science (SD) degree. Please see page 9 for information about the Master of Public Health concentration in Occupational and Environmental Health.

Master of Science in Environmental Health (four-semester program)

Applicants to the four-semester (80-credit) SM program in Environmental Science and Engineering normally hold a bachelor's degree. For study in Environmental Health Sciences, the degree should be in engineering, chemistry, physics, biology, or mathematics; in Environmental Science and Risk Management, the preferred degree is in physical science, engineering, or the social and management sciences. Normally, students also have several years of work experience in the environmental field. For Industrial Hygiene and Occupational Safety, the degree should be in engineering, chemistry, physics, or quantitative or molecular biology. Applicants with other degrees who have appropriate scientific and quantitative preparation may also be considered. Most applicants have relevant work experience. Admission decisions are based on academic records, standardized test scores, letters of recommendation, and prior experience.

Master of Science in Environmental Health (two-semester program)

Applicants with exceptional credentials may request consideration for admission to a two-semester (40-credit) SM program in Environmental Science and Engineering studying Environmental Health Sciences or Industrial Hygiene and Occupational Safety. Candidates for the former program normally have a bachelor's degree in engineering, chemistry, physics, biology, or mathematics, as well as an advanced degree or at least two years of work experience in the environmental field. The two-semester Industrial Hygiene and Occupational Safety program is designed for practitioners with extensive experience who seek a professional credential; candidates may hold a master's or doctoral degree in engineering, chemistry, physics, quantitative or molecular biology, or a related field. Because entry into the two-semester

For more information about research and training in Industrial Hygiene and Occupational Safety, please contact Thomas J. Smith, PhD, Department of Environmental Health, 665 Huntington Avenue, Boston, MA 02115. Phone: 617-432-3315 Fax: 617-432-0219 E-mail: tsmith@hohp.harvard.edu

Applicants to the doctoral program in Environmental Science and Engineering are strongly encouraged to arrange an interview with faculty members. Please contact Linda A. Fox, Administrator, Environmental Science and Engineering Concentration, Department of Environmental Health, 665 Huntington Avenue, Boston, MA 02115. Phone: 617-432-3351 Fax: 617-432-3349 E-mail: lfox@sph.harvard.edu

Timothy E. Ford, PhD (University of Wales, Bangor); Associate Professor of Environmental Microbiology. Surface, source, and drinking water microbiology; microbial cycling/transformation of pollutants; microbiologically influenced corrosion; groundwater-surface water interactions; aerosolization of microorganisms and microbial products.

Jeffrey J. Fredberg, SMME, ME, PhD (Massachusetts Institute of Technology); Professor of Bioengineering and Physiology; Associate Professor of Pediatrics, Harvard Medical School. Identification of the mechanical basis of airway and lung parenchymal function at the levels of organ, tissue, cell, and protein.

Gareth M. Green, MD (Harvard University); Professor of Environmental Health and Associate Dean for Professional Education. Air pollution and occupational/environmental lung disease; defense mechanisms, lung clearance, and biomarkers; education, science, and policy.

Joseph J. Harrington, AM, PhD (Harvard University); Professor of Environmental Health Engineering (Environmental Health and Population and International Health), Gordon McKay Professor of Environmental Engineering, Faculty of Arts and Sci-

ences. Water resources planning and quality management; environmental monitoring and control systems, applied statistics for modeling, management for tropical disease control.

Russ B. Hauser, MD (Albert Einstein College of Medicine), MPH, SD (Harvard University); Assistant Professor of Occupational Medicine. Occupational lung diseases, environmental agents and allergic airways disease; male reproductive epidemiology.

Robert F. Herrick, MS (University of Michigan), SD (Harvard University); Lecturer on Industrial Hygiene. Exposure-reactive aerosols; characterization of complex exposures; interaction of individuals with a source of exposure.

Howard Hu, MD (Albert Einstein College of Medicine), MPH, SM, SD (Harvard University); Associate Professor of Occupational Medicine. Epidemiology of chronic lead toxicity using biomarkers of bone lead accumulation and genetic susceptibility.

Karl T. Kelsey, MD (University of Minnesota), MOH (Harvard University); Associate Professor of Occupational Medicine (Environmental Health) and Associate Professor of Radiobiology (Cancer Biology). Occupational and environmental carcinogenesis, with emphasis on the study of workplace mutagen and carcinogen exposure, using epidemiological application of cytogenetic and molecular endpoints.

Petros Koutrakis, MS, PhD (University of Paris); Professor of Environmental Sciences. Sampling and analysis of air pollutants; atmospheric, indoor air, and aerosol chemistry; application of multivariate techniques to source apportionment; acid rain; urban air pollution.

Donald K. Milton, MD (Johns Hopkins University), MPH, DPH (Harvard University); Associate Professor of Occupational and Environmental Health. Measurement of airborne endotoxin, epidemiology of acute and chronic responses to bioaerosol exposure.

Richard R. Monson, MD, SM, SD (Harvard University); Professor of Epidemiology (Environmental Health and Epidemiology). Relationship between the workplace, the environment, and disease.

program is based on the applicant's ability to waive several of the required courses listed in the concentration descriptions above, students' programs are designed individually.

Doctor of Science in Environmental Health

Applicants to the doctoral program in Environmental Science and Engineering studying Environmental Health Sciences normally have a master's degree in environmental science or a related field and strong scientific and quantitative skills. Those applying to study in Environmental Science and Risk Management normally have a master's degree plus two to three years of work experience. This area is designed for students interested in research in the related fields of environmental risk assessment and decision making. Industrial Hygiene and Occupational Safety applicants normally hold a master's (in rare cases, only a bachelor's) degree in engineering, chemistry, physics, or quantitative or molecular biology. Applicants are also expected to have relevant work experience.

Students undertake a comprehensive program in their specialty area, as outlined in the descriptions above, and must fulfill course requirements for one major (20 credits) and two minor (10 credits each) fields. Admission into the doctoral program in all areas of interest depends upon demonstrated competence in the requirements for one of the SM programs described above. Doctoral candidates must pass the departmental written examination and the school-wide oral qualifying examination; complete, defend, and submit a thesis; and serve as a teaching assistant for the equivalent of three 5-credit courses. During the course of their program, most doctoral students also take advantage of opportunities to present papers at scientific conferences.

Occupational Health

This concentration is designed to train occupational safety and health professionals to recognize and prevent occupational injuries and disease. Concentration faculty carry out research spanning a wide range of occupational health problems, with the broad objective of identifying and contributing to the reduction or elimination of job-related health hazards. Areas of

interest include respiratory disease among exposed populations, including auto workers, textile workers, agricultural workers, workers exposed to fuel-oil ash, and building occupants; reproductive and chronic disease studies of populations exposed to petrochemicals and heavy metals; biological and chemical hazards assessment; epidemiology of acute injury and cumulative trauma disorders; occupational and environmental cancers such as lung, skin, and bladder cancer; biomonitoring and medical surveillance; worker training; and occupational health research and training in developing countries. The concentration faculty have been in the forefront of the development of biochemical and molecular markers and their applications in epidemiologic studies of exposed populations.

The training programs in occupational safety and health are offered through the NIOSH-sponsored Educational Resource Center for Occupational Safety and Health. As described below, the following programs are offered: Master of Science (SM) and Doctor of Science (SD) in Environmental Health with a focus on Industrial Hygiene and Occupational Safety; MSN in Primary Health Care Nursing (from Simmons College) and SM in Environmental Health with a focus on Occupational Health Nursing (from Harvard University), both in cooperation with Simmons College; Master of Occupational Health (MOH); SM in Environmental Health with a focus on Occupational Safety and Health; and SD in Environmental Health with a concentration in Occupational Health, or Doctor of Public Health (DPH). Please see page 9 for information about the MPH concentration in Occupational and Environmental Health.

Master of Science/Doctor of Science in Environmental Health

Industrial Hygiene and Occupational Safety is designed for those interested in the anticipation, identification, evaluation, and control of occupational hazards. Admissions and curriculum are administered through the department's Environmental Science and Engineering Program, described on page 26.

"In environmental health management," says Eric Schupper, "we have a holistic view of public health. We focus on the things humans produce that go into the environment and affect people. It sometimes sounds as though we're protecting people from the environment, but we're actually protecting people from other people's pollution."

Eric spent several years in the US Army before earning a bachelor's degree in public health at the University

of North Carolina. After earning his master's degree at HSPH, he plans to go to law school: "This has been my goal for years. Now, I'm acquiring the skills and knowledge, specifically in risk assessment and environmental regulation, that I need to be a well-rounded and technically proficient environmental attorney."

Master of Science in Primary Health Care Nursing (one-year program)

This program is offered by the Educational Resource Center and Simmons College, which awards the degree. It is designed for registered nurses who are seeking preparation as occupational health nurse practitioners.

Participants undertake practica in industrial settings, clinics, and hospital-based occupational health programs and complete the following courses, taught at Simmons College: NUR 404, *Normal and Abnormal Human Physiology*; NUR 406, 407, 408, *Research Methods I, II, III*; NUR 480, 482, *Theory and Practice: Primary Health Care Nursing I, II*; NUR 481, *Theoretical Foundations for Nursing Practice*; NUR 422, *Clinical Pharmacology for Nurses in Ambulatory Care*; NUR 485, 486, *Health in the Workplace I, II*; GSHS 900, *Introduction to Health Care Systems*; NUR 470, *Health Promotion in Primary Care Nursing*; and EH 231cd, *Occupational Health Policy and Administration*.

Applicants must have at least a bachelor's degree in nursing from a program accredited by the National League of Nursing, must show satisfactory completion of basic statistics and physical assessment courses, and must be registered to practice nursing in a US state or territory. Tuition support may be available for US citizens or permanent residents through NIOSH traineeships or other traineeships or scholarships.

Four-Semester, Dual-Degree Master of Science in Environmental Health (HSPH) and Primary Health Care Nursing (Simmons College)

The dual-degree program in Occupational Health Nursing is also aimed at preparing nurses for positions as occupational health nurse practitioners. It emphasizes identification of health hazards, workplace assessment, program planning and intervention, worker health promotion, and disease and injury prevention. The program integrates curricula from HSPH and Simmons College, with courses taken concurrently at both institutions. Nurses interested in this program must apply to and be accepted by both schools.

Students in the dual degree program fulfill essentially the same course requirements at Simmons College as those enrolled in the one-year MSN program. In addition, they must take the following HSPH courses: EH 243ab, *Ergonomics/Human Factors*; EH 262ab, *Introduction to Occupational Hygiene*; EH 241cd, *Occupational Safety*; ID 263cd, *Practice of Occupational Health*; BIO 200, *Principles of Biostatistics*; EPI 200, *Principles of Epidemiology*; EH 231cd, *Occupational Health Policy and Administration*; EH 238ab, *Occupational Health Nursing Management*; EPE 215, *Environmental and Occupational Epidemiology*; EH300b, *Tutorial in Toxicology*; and two electives. Students must also complete an independent study project.

Applicants must have at least a bachelor's degree in nursing from a program accredited by the National League of Nursing, must show satisfactory completion of a basic statistics course, and must be registered to practice nursing in a US state or territory. Tuition support may be available for US citizens or permanent residents through NIOSH traineeships or other traineeships or scholarships.

For more information about research and training in Occupational Health Nursing, please contact Susan Legendre, Occupational Health Program, 665 Huntington Avenue, Boston, MA 02115.

Lucas M. Neas, MSE (West Virginia College of Graduate Studies), SD (Harvard University); Assistant Professor of Environmental Health and Epidemiology. Environmental determinants of respiratory symptoms and pulmonary function

Haluk Ozkaytak, PhD, SM (Harvard University); Lecturer on Environmental Health Management. Risk modeling; exposure assessment, risk management.

Joseph D. Paulauskis, MS, PhD (Miami University); Associate Professor of Molecular Biology. Molecular/biochemical mechanisms of toxicity for environmentally relevant contaminants; gene regulation during pulmonary inflammation.

Lorenz R. Rhomberg, PhD (State University of New York at Stony Brook); Assistant Professor of Risk Assessment (Health Policy and Management and Environmental Health). Critical analysis of the methods and procedures of human risk assessment, especially quantitative methods for putative carcinogens

Stephen N. Rudnick, MS (University of Pennsylvania), SM, SD (Harvard University); Lecturer on Industrial Hygiene Engineering. Engineering control of particulate air contaminants in indoor and occupational settings and engineering control systems; sampling and analysis of air contaminants.

Joel D. Schwartz, PhD (Brandeis University); Associate Professor of Environmental Health. Environmental epidemiology; natural history of lung function and disease; cost-benefit analysis; nonclassical time series analysis, nonparametric smoothing and graphical methods in epidemiology.

Jacob Shapiro, SM (Brown University), PhD (University of Rochester); Lecturer on Biophysics in Environmental Health. Occupational and environmental radiation protection; low-level radioactive waste disposal; radiation dosimetry and protection standards, environmental radiation surveillance

For more information about the Master of Occupational Health program, or research and training in Occupational Safety and Health, please contact David C. Christiani, SM, MD, MPH, Department of Environmental Health, 665 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-1260
Fax 617-432-0219
E-mail: dchris@hsph.harvard.edu

James P. Shine, PhD (University of Massachusetts), Assistant Professor of Aquatic Chemistry. Distribution, transport, fate, and effects of contaminants in aquatic ecosystems.

Stephanie A. Shore, PhD (McGill University); Associate Professor of Physiology. Airway physiology and pharmacology; role of neuropeptides in the pathogenesis of airway disease

Constantinos Sioutas, MS, MS (University of Minnesota), SD (Harvard University); Assistant Professor of Industrial Hygiene and Aerosol Science. Development of sampling methods to assess human exposure to pollutants; use of particle technology in the design of innovative drug delivery systems.

Thomas J. Smith, MPH, MS, PhD (University of Minnesota); Professor of Industrial Hygiene. Evaluation of exposure-response relationships through occupational epidemiologic studies; application of pharmacokinetic modeling to study exposure-tissue dose relationships; lab and field simulations to characterize exposure determinants.

Stover H. Snook, AM (Fordham University), PhD (Tufts University); Lecturer on Ergonomics. Low-back pain; manual materials handling; heat stress, fatigue; stairway design; personal protective equipment; cumulative trauma disorders.

Frank E. Speizer, MD (Stanford University); Professor of Environmental Science; Professor of Medicine, Harvard Medical School. Environmental epidemiology; pulmonary diseases; cancer and nutrition; health effects of air pollution; occupational and environmental medicine

The Occupational and Environmental Medicine Residency

This residency emphasizes the development of skills in clinical occupational medicine and occupational epidemiology. During this year, acquired knowledge and abilities are applied to patient management and workplace problem solving, and at least one short-term research project is designed, executed, and documented under faculty supervision. Field experience includes rotations through hospital-based occupational health clinics, the Massachusetts Division of Occupational Hygiene, and corporate medical departments. The residency is fully accredited by the Accreditation Council for Graduate Medical Education.

Applicants must be graduates of an approved school of medicine and must have completed at least one year of clinical training in internal medicine or family practice; board eligibility or certification in a primary care specialty is preferred. Physicians currently holding positions in the field of occupational safety and health who plan to return to these positions are considered particularly strong candidates for admission. In addition to

submitting an application to the degree program, prospective residents should send a letter of interest to the Occupational Health Program, enclosing a curriculum vitae listing medical training and experience, research experience, and publications. Admission to the practicum year of the residency is a separate process from, and usually occurs shortly after, admission to the degree program. Applicants who require early notification of admission to the residency program should indicate this in a cover letter accompanying the application form. Applications for the degree program are reviewed and approved beginning in September for admission in September of the following year. Continuation into the second year of the residency is contingent upon having had adequate prior clinical experience and exemplary performance in the didactic phase of the program.

Some financial support for residency candidates who are US citizens or permanent residents may be available through traineeships or National Research Service Awards.

Master of Occupational Health

This two-semester (40-credit) program is designed to train physicians in the public health disciplines relevant to the prevention and control of occupational disease and injury. Physicians interested in occupational and environmental medicine may apply either to the MOH program or to the Occupational and Environmental Health concentration of the Master of Public Health (MPH) program (see page 9). Either the MOH or the MPH is taken as the first year of a two-year Occupational and Environmental Medicine Residency (see above).

Core course requirements for the MOH (or the MPH) are as follows: BIO 200, *Principles of Biostatistics*; EH 243ab, *Ergonomics/Human Factors*, or EH 241cd, *Occupational Safety*; EH 262ab, *Introduction to Occupational Hygiene*; EPI 200, *Principles of Epidemiology*; HSB 201a, *Society and Health* (or alternate); TOE 204ab, *Principles of Toxicology*; EH 231cd, *Occupational Health Policy and Administration*; EH 232cd, *Introduction to Occupational and Environmental Medicine*; EPE 215, *Environmen-*

tal and Occupational Epidemiology; and ID 263cd, *Practice of Occupational Health*. Recommended electives include either BIO 210cd, *The Analysis of Rates and Proportions*, or BIO 211cd, *Regression and Analysis of Variance in Experimental Research*. MOH students may also choose to take ID 250, *Ethical Basis of the Practice of Public Health*, which is required by the MPH program. Also recommended is MIT course 10.805J, *Technology, Law, and the Working Environment*.

Master of Science in Environmental Health

Occupational Safety and Health emphasizes the epidemiologic and biostatistical aspects of this field. It is normally completed over four semesters, although an individual with a PhD or JD may be admitted to a two-semester program. It is generally expected that students without a prior doctoral degree will wish to enroll in a subsequent doctoral program.

Applicants normally have a bachelor's degree and advanced training in science, including college-level organic and inorganic chemistry. Those currently holding positions in the field of occupational safety and health who plan to return to these positions are considered particularly strong candidates for admission. Some financial support may be available for US citizens or permanent residents through traineeships or National Research Service Awards.

Doctor of Science in Environmental Health/Doctor of Public Health

An SD or DPH degree may be earned by students who wish to concentrate in Occupational Health. Students fulfill course requirements in one major (20 credits) and two minor fields (10 credits each). In addition, they must pass a written departmental comprehensive examination, pass the school-wide oral qualifying examination, and complete, defend, and submit a thesis.

Physiology

The concentration in Physiology focuses on normal and pathological functions of organisms. It centers on the respiratory system because the system presents an immense, thin surface area to the environment, and thus is an important route of entry to the body as well as a site of damage from toxins and infections. Areas of study include mediators and adhesion molecules involved in inflammation; the effects of inhaled particles; lung infections; biomechanics of cells and tissue in normal and inflamed lungs; smooth muscle function in asthma; control of breathing; sleep-related breathing disorders; mechanisms of dyspnea and respiratory sensations; cardiovascular pathobiology; and epithelial cell, macrophage, lymphocyte, and neutrophil lung biology. The biology is broadly based, ranging from molecular and cell biology to integrated organismic, environmental, and comparative physiology.

The Physiology concentration integrates a range of scientific disciplines, including physics, bioengineering, physiology, biomathematics, cell biology, molecular biology, clinical science, and epidemiology. By working within this rich interdisciplinary environment, students learn many measurement technologies, discover a va-

riety of disciplinary approaches, and develop mature scientific thinking. Special facilities are available, including a confocal microscope, analytical electron microscopes, a flow cytometer, a sleep laboratory, and a sensation laboratory.

As described below, the concentration leads to the Doctor of Philosophy (PhD) degree, offered through the Biological Sciences in Public Health Program (a component of the Division of Medical Sciences, Graduate School of Arts and Sciences). Applicants may prefer to follow a different curriculum leading to the Doctor of Science (SD) degree; this option may be available by special arrangement with the department.

Doctor of Philosophy in Biological Sciences in Public Health (BPH) (Physiology)

Students wishing to study cellular and molecular biology or physiology as they pertain to major problems in public health may apply to the Biological Sciences in Public Health program. This program offers the PhD degree through Harvard University's Graduate School of Arts and Sciences, Division of Medical Sciences, Committee on Biological Sciences in Public Health.

The program is designed to prepare students for research careers in respiratory physiology. It offers a firm foundation in the basic biomedical sciences, as well as in epidemiology and biostatistics. Specific courses supplement this core, as dictated by individual research concentrations. Students in this program engage in laboratory rotations in three different research areas to enable them to assess realistically their interests in a thesis project and to evaluate the suitability of the laboratory and the mentor. At the completion of these rotations, students select an area of concentration and a thesis research laboratory and complete the required curriculum. A qualifying examination must be passed before engaging in thesis work, and the thesis must be defended before the granting of the PhD. Some students also participate in the Harvard-Markey Biomedical Scientist Training Program, which is designed to offer PhD students a greater knowledge of human biology and disease.

For more information about research and training in Physiology, please contact Joseph D. Brain, SD, Department of Environmental Health, 665 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-1272
Fax: 617-277-2382
E-mail: brain@hsph.harvard.edu

For application materials and information about admission to the PhD program, please contact the Division of Medical Sciences, Harvard Medical School, 260 Longwood Avenue, Room 435, Boston, MA 02115.
Phone: 617-432-0162

Applicants who have specific questions about the PhD program may contact Ruth Kenworthy, Division of Biological Sciences, 665 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-2932
Fax: 617-432-4098
E-mail: kenworthy@cvlab.harvard.edu

John D. Spengler, PhD (State University of New York at Albany), SM (Harvard University); Professor of Environmental Health. Assessment of human exposures to environmental contaminants; application of advanced particle analysis techniques to identify source contributions to indoor and ambient aerosols; building-related illnesses.

Helen H. Suh, SM, SD (Harvard University); Assistant Professor of Environmental Chemistry and Exposure Assessment. Multimedia exposure assessment; exposure modeling; ambient and indoor air pollution; study design.

Ning Wang, MS (Huazhong University of Science and Technology), SD (Harvard University); Assistant Professor of Physiology and Cell Biology. Cytoskeletal mechanics; mechanotransduction; cell adhesion and migration; cancer metastasis; effects of mechanical forces on cells.

Xiping Xu, MD (Anhui Medical University, China), PhD (University of Tsukuba, Japan), SM (Harvard University), Associate Professor of Occupational Epidemiology; Associate Professor of Medicine, Harvard Medical School. Environmental, occupational, and genetic epidemiology of respiratory, cardiovascular, and metabolic diseases.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School

Robert B. Banzett, PhD (University of California, Davis); Associate Professor in the Department of Environmental Health. Respiratory neurophysiology and mechanics, perceived sensation; control; interaction with locomotion; fluid dynamics in the avian lung.

Harold A. Chapman, Jr., MD (University of Alabama); Associate Professor in the Department of Environmental Health. Pathophysiology of chronic inflammatory reactions in the lung; biology of proteases and antiproteases; role of coagulation and fibrinolysis in the pathogenesis of acute lung injury.

Jeffrey M. Drazen, MD (Harvard University); Professor in the Department of Environmental Health. Pulmonary and respiratory pharmacology; mediators of immediate hypersensitivity; mucus regulation and expression in chronic bronchitis.

John J. Godleski, MD (University of Pittsburgh); Associate Professor in the Department of Environmental Health. Experimental models of normal and pathologic responses to inhaled particles.

Diane R. Gold, MD (University of Connecticut), DTM&H (University of Liverpool), MPH (Harvard University); Assistant Professor in the Department of Environmental Health. Acute lower respiratory illness in childhood as a predictor of lung function and chronic respiratory symptoms; the relationship between indoor/outdoor air pollution and childhood respiratory morbidity; socioeconomic and environmental predictors of asthma prevalence and severity.

Rose H. Goldman, MD (Yale University), MPH, SM (Harvard University); Assistant Professor in the Department of Environmental Health. Occupational health in the biotechnology industry; metal poisoning; neurotoxicity; cumulative trauma injuries.

Applicants generally have a bachelor's degree and demonstrated competence in organic and biological chemistry, general biology, physics, and calculus. Those deficient in one of these areas may be admitted provisionally on the condition that appropriate courses will be taken before and/or after entering the program. Applicants must take both the GRE general and subject tests by October in order to meet the application deadline of December 15.

Most students admitted to the program receive a stipend and tuition support. Students are encouraged to apply for fellowships from outside sources since certain external fellowships provide higher stipends. While funds to support international students are limited, one special scholarship is available each year for a student from a developing, sub-Saharan African country. There is also a university-wide fellowship program that provides funding to qualified underrepresented minority students in the sciences.

Graduates ordinarily assume positions as faculty members and research scientists at medical schools, research institutes, and schools of public health. Career opportunities in the biological sciences as they apply to public health are expected to grow both in academia and in the biotechnology and pharmaceutical industries.

Courses Offered by the Department of Environmental Health, 1997-98

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1998 summer sessions).

EH 201b. Introduction to Environmental Health (G. Green, Hu)

Analyzes health problems stemming from contamination of air, water, food, the workplace, and other special environments. Examines policy required for regulation and strategies for prevention and control. (2.5 credits)

EH 202d. Principles of Environmental Health (G. Green, Hu, Brain)

Focuses on the assessment of risk to health from environmental exposures, the use of such data in policy development and environmental management, and legal strategies for redressing environmental injury and controlling environmental degradation. (2.5 credits)

EH 205ab. Human Physiology (Shore, Banzett, Paulauskis)

Introduces biological principles, physiology of cells, organ systems, and the organism. Includes some pathophysiology. (5 credits)

EH 223ab. Advanced Respiratory Physiology (Butler, Fredberg)

Covers lung structure, volume and flow mechanics, surfactant function, gas exchange, and lung and chest wall interaction. Presents classic concepts and recent advances. (5 credits)

EH 225cd. Advanced Topics in Physiology (Fredberg, Shore, Paulauskis, Wang)

Allows students to focus on special topics in lung biology. The topic for 1997-98 is the physical basis and quantitative description of chemical, electrical, and mechanical signaling. (5 credits)

EH 231cd. Occupational Health Policy and Administration (Monson, Langer)

Examines legal, economic, and political foundations of occupational health activities in the US. Discusses roles of government, unions, research organizations, and corporations. (2.5 credits)

EH 232cd. Introduction to Occupational and Environmental Medicine (Hu, Christiani)

Reviews diagnosis following exposure to specific workplace substances, including asbestos, lead, and organic solvents. Presents techniques for assessing disability. (2.5 credits)

EHE 235ab. Scientific Basis of Occupational Health Regulations (Eisen, Wegman)

Reviews the scientific basis for the association of occupational exposures and disease. Emphasizes the evaluation of epidemiologic literature, the interface of science and regulatory policy, and the role of risk analysis in setting health standards. (5 credits)

EH 238ab. Occupational Health Nursing Management (Monson, Travers)

Requires students to apply skills and knowledge to occupational health programs. Includes organizational development, communication skills, and techniques for managing change. (2.5 credits)

EHH 240a. Risk Assessment (J. Evans, Hammitt)

Introduces the framework of risk assessment, including its relationship with cost-benefit decision analysis and other tools for improving environmental decisions. (2.5 credits)

EH 241cd. Occupational Safety (Mangone, Smith)

Covers principles of occupational safety, including safety regulation and standards, models of accident causation, investigation procedures, and techniques for accident control. (2.5 credits)

EHH 242c. Regulatory Toxicology (Rhombert, Milton)

Covers basic principles of toxicology and the ways animal and human studies can be used to further the understanding of dose-response relationships. Presents quantitative pharmacokinetic and dose-response models as used in risk assessment. (2.5 credits)

EH 243ab. Ergonomics/Human Factors (Herrick, Courtney, Ciriello)

Emphasizes the design of the job to fit the worker. Investigates specific problems resulting from the nature of the job itself and considers the physiological, biomedical, psychological, and anatomical characteristics of the worker in the development of good job design principles. (2.5 credits)

EH 250cd. Protecting Workers from Hazardous Substances (Rudnick, Martin, Walters)

Covers the recognition, evaluation, and control of workers' exposure to chemical and physical agents during remediation of hazardous sites, emergency response activities, and related operations. (2.5 credits)

EH 253cd. Ventilation and Indoor Environmental Quality (Rudnick, Spengler, DiBerardinis)

Covers industrial ventilation to control workers' exposure to airborne contaminants, HVAC systems, indoor environmental quality assessment of buildings and residences, asbestos and other fibers, biologicals, and electromagnetic fields. (5 credits)

EH 254cd. Evaluation and Control of Noise and Vibration (Rudnick)

Covers the fundamentals, principles, evaluation, and control of noise and vibration. (2.5 credits)

EH 256cd. Introduction to Aerobiology (Burge, Milton, Muilenberg)

Emphasizes the microbiology of the air, including the nature of organisms producing aerosols, the nature of aerosols and the dynamics of aerosol populations, and exposure assessment issues. (2.5 credits)

EH 257cd. Water Pollution (Ford, Shine, Mitchell)

Presents the basic principles of water pollution and related issues on local, regional, and global scales. Discusses the chemical, physical, and biological properties of water and contaminants in ground, surface, brackish, and marine waters. (5 credits)

EH 262ab. Introduction to Occupational Hygiene (Smith)

Covers key aspects of industrial hygiene, including recognition, evaluation, and control of health hazards at work. Considers chemical, physical, and biological hazards, and the criteria for each. Includes one or more workplace visits. (2.5 credits)

EH 263cd. Analytical Chemistry and Exposure Assessment (Yanagisawa, Ford, Shapiro, Burge, Shine)

Emphasizes first water and then air, requiring students to design and implement field investigations to assess human exposures to environmental pollutants in occupational or community settings. (5 credits)

EH 264cd. Water Environment (J. Harrington)

Provides students with an understanding of water engineering principles, emphasizing design and treatment of water supply systems in developing and developed countries. (2.5 credits) Not offered 1997-98.

EH 266cd. Land Environment and Waste Management (First)

Focuses on the nature, sources, and amounts of municipal, industrial, and hazardous wastes; laws governing storage, environmental control, transport, and disposal; waste management, minimization, elimination, recycling, and intermedia transfers—ground to water and ground to air. (2.5 credits)

EH 267cd. Industrial Hygiene Internship and Environmental Sciences Research (Smith, Koutrakis)

Refines communication skills of students who have participated in the Industrial Hygiene Internship (EH 273ab). (2.5 credits)

EHE 268b. Respiratory Epidemiology (Dockery)

Reviews the epidemiology of chronic respiratory diseases; presents demographic distribution and time trends of these diseases; and discusses known risk factors, with particular attention to environmental hazards. (1.25 credits)

EH 269cd. Exposure Assessment for Environmental and Occupational Epidemiology (Smith, Spengler)

Reviews methods used to characterize environmental and occupational exposures. Introduces approaches for biologically based exposure assessment matched to epidemiologic designs. (2.5 credits)

EH 270cd. Principles of Pollution Prevention (Pojasek, Spengler)

Students work in groups to learn to apply creative problem solving techniques to the prevention of pollution. Students will learn how to prepare a process map and use it as a template for tracking material use and loss. (5 credits)

EEB 271c. Advanced Regression Techniques for Environmental Epidemiology (Schwartz, Neas, P. B. Ryan)

Covers nonlinear exposure-response relationships and repeated measure designs, including smoothing techniques, generalized additive models, robust regression, and time series models. Students use datasets to model effects of exposures on health outcomes. (2.5 credits)

EH 273ab. Industrial Hygiene Internship (Smith)

Places students in an industrial or similar workplace under the direction of an experienced industrial hygienist to learn evaluation techniques and to study a specific hazard or problem. (20 credits)

Stefanos N. Kales, MD, MPH (Harvard University); Assistant Professor in the Department of Environmental Health. Occupational/environmental lung disease; occupational/environmental toxicology.

Lester Kobzik, MD (Tufts University); Associate Professor in the Department of Environmental Health. Lung macrophage phagocytosis and response to inhaled particles; pulmonary inflammation and pathology.

Stephen H. Loring, BMS (Dartmouth Medical School), MD (Harvard University); Associate Professor in the Department of Environmental Health. Chest wall mechanics, hyperinflation, and lung transplantation; mechanics and physiology of respiratory muscles and the pleural space.

Steven A. Shea, PhD (London University); Assistant Professor in the Department of Environmental Health. Control of breathing, respiratory sensations, and sleep physiology in humans.

Richard Verrier, PhD (University of Virginia); Associate Professor in the Department of Environmental Health. Neural triggers of sudden cardiac death; cardiac electrophysiology; T-wave alternans; coronary hemodynamic function; novel delivery systems for antiarrhythmic therapy.

Angeline E. Warner, MS (University of Miami), DVM (University of Florida), SD (Harvard University); Assistant Professor in the Department of Environmental Health. The role of mononuclear cells, specifically pulmonary intravascular macrophages in inflammatory lung injury and the adult respiratory distress syndrome.

Scott T. Weiss, MD (Case Western Reserve School of Medicine), SM (Harvard University); Professor in the Department of Environmental Health. Natural history of chronic lung disease; epidemiology of asthma and hypertension; cardiovascular, occupational, environmental, and genetic epidemiology; the effect of aging on pulmonary function.

Adjunct Faculty

Ellen A. Eisen, SM, SM, SD; Professor of Work Environment, University of Massachusetts, Lowell.

Alan Eschenroeder, BME, PhD; private consultant

Jouni J.K. Jaakkola, DSc, PhD; Lecturer, Helsinki University of Technology and University of Helsinki.

Robert B. Pojasek, PhD; Senior Scientist and Senior Program Manager, Cambridge Environmental, Inc.

P. Barry Ryan, SM, PhD; Professor of Environmental and Occupational Health, Emory University.

Peter A. Valberg, AM, SM, PhD; Senior Associate, Gradient Corporation.

David H. Wegman, MD, SM; Professor and Chair, Department of Work Environment, University of Massachusetts, Lowell.

Yukio Yanagisawa, MEng, DEng; Adjunct Professor of Environmental Health Chief Researcher, Research Institute for Innovative Technology on Earth.

EH 276ab. Case Studies in Exposure and Risk Assessment (Ozkaynak, Eschenroeder)

Reviews personal and population exposure models for predicting multimedia and multipathway exposures to volatile organic compounds, gases, particles, and metals. Demonstrates application of physical and semi-empirical exposure models for predicting exposures and health risks. (2.5 credits)

EHB 277ab. Modern Genetic Epidemiology and Gene Mapping (Xu, Schork, Laird, Haines)

Introduces statistical methods in genetic epidemiology and gene mapping techniques. Topics include heritability estimation, segregation analysis, linkage disequilibrium analysis, and issues in population genetics. (2.5 credits) Not offered 1997-98.

EH 278ab. Human Health and Global Environmental Change (Hu, Chivian, P. Epstein)

Provides an overview of the basic physics, chemistry, and biology of global climate change, and of the potential consequences of these changes for human health. Topics include stratospheric ozone depletion, effects of toxic substance pollution on global ecosystems, the degradation of terrestrial and marine environments, and the loss of species and biodiversity. (5 credits)

EHE 280cd. Biomarkers in Occupational and Environmental Health (Kelsey, Christiani)

Covers the use of biomarkers as measures of exposure, absorbed dose, biological effect, and health outcome in acute and chronic disease states. (2.5 credits) Not offered 1997-98.

EH 292a. Air Pollution: Properties of Gases and Particles (Sioutas, Koutrakis)

Covers the laws of ideal and real gases and discusses gas properties of viscosity, diffusivity, and mean free path. Topics include particle formation and deposition mechanisms, respiratory sampling, and instrumentation for sizing and measuring airborne particles in the atmosphere. (2.5 credits)

EH 293b. Air Pollution: Atmospheric Processes (Koutrakis, Spengler)

Provides an understanding of air pollution meteorology, including the physical and mathematical descriptions of global, synoptic, and mesoscale circulation patterns. Presents concepts of heat, momentum, and material transfer in the lower atmosphere to aid understanding of transport and dispersion of pollutants. (2.5 credits)

EH 294c. Air Pollution: Atmospheric Dispersion Modeling (Koutrakis, Ozkaynak, Hanna)

Covers the transport and dispersion of pollutants in the atmosphere. Presents computational models used to estimate the airborne concentration of industrial facilities, power plants, and mobile sources. (2.5 credits)

EH 295d. Air Pollution: Energy and Thermodynamics (Yanagisawa, Jahng)

Employs thermodynamics theory to organize understanding of kinetics, chemical reactions, and equilibrium of air pollutants as taught in previous air pollution courses. Topics include the first and second laws of thermodynamics, chemical potential, and equilibrium. (2.5 credits)

Independent Study, Field Experience

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research or to undertake specialized readings or studies in the following areas: physiology, aerosol technology, air pollution control, environmental health management, environmental epidemiology, environmental microbiology, industrial hygiene and ventilation, nuclear medicine, occupational medicine, radiological health, respiratory biology, respiratory epidemiology, and solid waste management. Supervised site visits and field research projects are available in medical, industrial hygiene, and environmental health departments of industries and governmental agencies.

Water pollution expert and associate professor Timothy Ford holds a device used to collect water samples from Massachusetts Bay. Above right, Associate Professor Harriet Burge, Research Associate Michael Muilenberg, and doctoral student Jasmine Chao sample air in an HSPH office as part of an investigation into the relationships between bioaerosols, health, and productivity in a large office building.

Department of Epidemiology

T

he Department of Epidemiology has a long tradition of teaching and research in the epidemiology of cancer, cardiovascular disease, and other chronic diseases, as well as in epidemiologic methodology. Current research in the department includes the role of viruses in the etiology of cancer; the connection between diet and risk of cancer, cardiovascular disease, and other major chronic diseases; the relationship between exposure to chemicals in the workplace and the development of cancer; factors in early life predisposing individuals to chronic diseases; case identification and risk factors in mental disorders; health effects of drugs, vaccines, and medical devices; and causes of human infertility.

Recent graduates have become members of the faculties of major universities, medical schools, and research institutes. They also serve as epidemiologists for the National Cancer Institute, Centers for Disease Control and Prevention, other domestic and international governmental institutions, as well as in private industry.

The department offers both a two-semester and a four-semester Master of Science (SM) program, as well as a Doctor of Science (SD) and a Doctor of Public Health (DPH) program. Students pursuing these degrees choose among the following areas of interest.

Epidemiology is the study of the frequency, distribution, and determinants of disease in humans, and is one of the fundamental sciences of public health. While individual epidemiologists have different study objectives and use different approaches, the aims of epidemiologic research ultimately lie in the prevention or effective control of human disease.

Cancer Epidemiology In addition to research methodology, the curriculum in this area includes courses on the biology and genetics of cancer; the basic concepts and issues of cancer epidemiology; the roles of diet, oncogenic viruses, and occupational exposures in the etiology of cancer; the prevention of cancer; and research methods. Research opportunities for students include a large number of ongoing cohort and case-control studies within the department and in conjunction with the Dana-Farber Cancer Institute. Financial support may be available for US citizens or permanent residents enrolled in a doctoral degree program or postdoctoral fellowship program in cancer epidemiology.

Professor and department chair Alexander Walker in the classroom. Walker teaches Design of Case-Control and Cohort Studies (EPI 203c) and Pharmacoepidemiology (EPI 221c).

For more information about research and training in Cancer Epidemiology, please contact Nancy E. Mueller, SD, Department of Epidemiology, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-4576

Fax: 617-566-7805

E-mail:

mueller@episun1.harvard.edu

For more information about research and training in Cancer Prevention, please contact Graham A. Colditz, MB, BS, DPH, Department of Epidemiology, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-2754

Fax: 617-432-0335

E-mail:

nhgac@gauss.med.harvard.edu

For more information about research and training in Cardiovascular Epidemiology, please contact Meir J. Stampfer, MD, DPH, Department of Epidemiology, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-525-2747

Fax: 617-525-2008

E-mail:

meir.stampfer@channing.harvard.edu

For more information about epidemiology research traineeships in cardiovascular disease or aging, please contact Julie E. Buring, SD, or Charles H. Hennekens, MD, DPH, 900 Commonwealth Avenue East, Boston, MA 02215.

Phone: 617-732-4965

For more information about research and training in Clinical

Epidemiology, please contact E.

Francis Cook, SD, Section on Clinical Epidemiology, Brigham and Women's Hospital, 75 Francis Street, Boston, MA 02115.

Phone: 617-732-5650

fran@clinepi.bwh.harvard.edu

Cancer Prevention This area provides students with a knowledge of the science of cancer prevention, expertise in a specialized research area, skill in policy analysis, and an introduction to professional networks through which they will be able to update continuously their knowledge of this evolving field. Social and behavioral scientists enrolled in the program prepare themselves to advance knowledge of the efficiency and effectiveness of alternative strategies for inducing behavioral change at the individual, institutional, community, or policy levels. Physicians prepare themselves for careers as clinical investigators or public health practitioners specializing in cancer prevention. The program combines the interdisciplinary resources of the Harvard Center for Cancer Prevention and of the Division of Cancer Epidemiology and Control in the Dana-Farber Cancer Institute.

Financial support may be available through the National Cancer Institute for doctoral students and postdoctoral fellows in the social and behavioral sciences and for physicians engaged in postdoctoral training. Candidates for financial support must be US citizens or permanent residents.

Cardiovascular Epidemiology This area provides training in research methodology and the epidemiology of cardiovascular diseases. Doctoral students conduct research in a substantive or methodological area related to cardiovascular epidemiology. Research traineeships may be available through Harvard Medical School for students interested in cardiovascular disease or aging; candidates must be US citizens or permanent residents who are enrolled in a degree program in epidemiology.

Clinical Epidemiology This area is designed primarily for clinicians and other health care professionals who wish to develop the quantitative and analytic skills needed for clinical research. Students take core courses in epidemiology and biostatistics to develop basic skills in study design and analysis that will allow them to examine clinical questions related to the diagnosis and treatment of disease. Additional courses in epidemiology and courses offered by other departments address related topics such as health status and quality of life measurement,

decision analysis, cost-effectiveness analysis, health services research, and quality improvement of health care.

While all requirements for this area may be met by taking courses offered during the regular academic year (fall and spring semesters), requirements for the two-semester Master of Science (SM) degree may also be partially fulfilled by taking the summer courses offered through the Program in Clinical Effectiveness (see page 82). Clinical Effectiveness students begin their program by taking a core set of courses during an initial summer period. They complete the program by taking advanced courses during the regular academic year and, if desired, during a second summer period. Alternatively, Clinical Effectiveness students who only take courses during two summer periods can satisfy the requirements for this degree by completing a supervised research project. The content of this project typically entails the design and implementation of a clinical study, the analysis of the resulting data, and the creation of a manuscript of suitable quality for publication.

Environmental/Occupational Epidemiology This area is closely associated with the concentrations in Environmental Epidemiology and Occupational Health in the Department of Environmental Health. Students take courses in epidemiology, environmental health, occupational health, biostatistics, and toxicology. Doctoral students conduct research in a substantive or methodologic area related to environmental or occupational health.

Financial assistance may be available for individuals who plan to pursue research and teaching careers in environmental and/or occupational epidemiology. Candidates for these traineeships must be US citizens or permanent residents enrolled in a doctoral program or postdoctoral fellowship program in epidemiology, environmental health, or occupational health.

Epidemiologic Methods This area provides training in the development and application of new methods in epidemiologic research. Through courses offered by the Department of Epidemiology, students learn to use and justify classical epidemiologic methods in study design, data analysis, and interpretation of results.

Through courses offered by the Department of Biostatistics, students receive training in biostatistical areas most relevant to epidemiologic research. Through advanced course work and tutorials, students are introduced to recent innovations in epidemiologic methodology. Doctoral students conduct research with faculty specializing in the development of new methodologies and in novel applications of existing methodologies to important data sets in epidemiology. Students enrolling in this areas of interest ordinarily have completed four semesters of college calculus and one semester of linear algebra.

Interdisciplinary Program in Infectious Disease

Doctoral-level educational and training opportunities relating to infectious disease is available through the Interdisciplinary Program in Infectious Disease. Students in this program fulfill the departmental requirements for doctoral students with additional coursework in biology, quantitative methods, and infectious disease. For more information on this program, see page 5. Master's-level students may follow the departmental track in infectious disease.

Infectious Diseases This area is designed to familiarize students with the epidemiology and biology necessary to understand the interactions of infectious agents, their hosts, and their vectors. Social and cultural aspects of infectious diseases and of related health services are covered, as are new and resurgent infectious diseases. Students in this area take courses in the departments of Epidemiology, Tropical Public Health, and Population and International Health. More advanced topics of infectious disease epidemiology are covered in tutorials with faculty specializing in this area (Freeman, Hunter, and Wilson).

Molecular Epidemiology This area introduces students to the application of molecular methods to epidemiologic studies. These methods may be useful as measures of exposure, disease susceptibility, or disease outcome. A range of relevant courses are available, as are research

opportunities, particularly in association with the Department of Environmental Health, the Dana-Farber Cancer Institute, and the Joslin Diabetes Clinic.

Oral and Dental Health Epidemiology This area prepares dentists and others interested in oral diseases for research and teaching careers in epidemiology with an emphasis on oral epidemiology and dental health. Students follow the required curriculum in epidemiology with additional course work in oral biology and the epidemiology of oral and dental diseases. Students also participate in field research activities, case-control studies of oral health risk factors, and clinical trials designed to test preventive, diagnostic, or therapeutic interventions. Funding may be available for US citizens or permanent residents enrolled in the doctoral program. This area of interest is jointly administered by the Department of Oral Health Policy and Epidemiology in the Harvard School of Dental Medicine and the HSPH Department of Epidemiology.

Pharmacoepidemiology This area is designed for those interested in studying the frequency and determinants of both unintended and expected effects of drugs and medical devices. Studies of the pattern of utilization of drugs and devices, cost-benefit and risk-benefit analyses, and investigation of the distribution of diseases possibly amenable to medical intervention represent important secondary themes. The Department of Epidemiology offers an intermediate-level course in pharmacoepidemiology and a variety of ongoing research projects. Relevant courses elsewhere in the school cover such areas as clinical trials, meta-analysis, drug regulatory affairs, decision analysis, and vaccine development. Students in pharmacoepidemiology have the opportunity to attend courses and congresses outside the school and are encouraged to undertake internships of up to three months in pharmaceutical firms or regulatory agencies. Students ordinarily have a prior degree in medicine or pharmacy. Others are expected to acquire substantially equivalent expertise in areas related to their research. Financial support may be available for doctoral students pursuing thesis research.

For more information about research and training in Environmental/Occupational Epidemiology, please contact Richard R. Monson, MD, SD, Department of Epidemiology, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-4587

Fax: 617-566-7805

E-mail: monson@hohp.harvard.edu

For more information about research and training in Epidemiologic Methods, please contact James M. Robins, MD, Department of Epidemiology, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-0206

Fax: 617-566-7805

E-mail: robins@sph.harvard.edu

For more information about programs or courses relating to Infectious Diseases, please contact Jonathan Freeman, MD, SD, Department of Epidemiology, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-4558

Fax: 617-566-7805

E-mail: jfreeman@hsph.harvard.edu

For more information about research and training in Molecular Epidemiology, please contact David J. Hunter, MB, BS, SD, Department of Epidemiology, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-2755

Fax: 617-432-0335

E-mail:

nhdjh@gauss.med.harvard.edu

For more information about research and training in Oral and Dental Health Epidemiology, please contact Chester Douglass, DMD, PhD, Harvard School of Dental Medicine, 188 Longwood Avenue, Boston, MA 02115.

Phone: 617-432-1456

Fax: 617-432-0047

E-mail:

cdouglass@warren.med.harvard.edu

For more information about research and training in Pharmacoepidemiology, please contact Alexander M. Walker, MD, DPH, Department of Epidemiology, 677 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-4565
Fax: 617-566-7805

Fax: 617-566-7805
E-mail: goldman@epiun1.harvard.edu

Faculty

Department Chair: Alexander M. Walker, MD, MPH, DPH (Harvard University); Henry Pickering Walcott Professor of Epidemiology. Pharmacoepidemiology; study design for observational research.

Alberto Ascherio, MD (University of Milan), Diploma (London School of Hygiene and Tropical Medicine), MPH, DPH (Harvard University); Assistant Professor of Nutrition and Epidemiology. Relation of dietary factors to the occurrence of human disease.

Lisa F. Berkman, MS, PhD (University of California, Berkeley); Florence Sprague Norman and Laura Smart Norman Professor of Health and Social Behavior and of Epidemiology. Social epidemiology; epidemiology of aging.

After receiving a bachelor's degree in pharmacy, Kristijan Kahler took a job in Connecticut as a pharmacist. Out of curiosity, he took introductory courses in epidemiology and biostatistics at NY Medical College. "I loved those courses!" says Kristijan. "So the following year I applied to HSPH." Kristijan is earning his master's degree in the Department of Epidemiology.

"One of my favorite courses has been the cost-effectiveness and cost-

benefit analysis course, taught by Professors Weinstein and Graham, because we were given opportunities to do our class work on real-life projects of interest. I did a cost-effectiveness analysis of albuterol and salmeterol, two asthma medications. This is exactly the kind of work I'd like to do after graduation."

Psychiatric Epidemiology This area introduces students to concepts and methods for studying the genetic and psychosocial factors that relate to the prevalence, incidence, and outcome of different types of psychiatric illnesses. Emphasis is given to issues of reliability and validity in studying such disorders among children, adolescents, and adults. The curriculum consists of six specialized courses as well as related courses offered in the Departments of Epidemiology and Biostatistics. Funding may be available through the National Institute of Mental Health for doctoral and postdoctoral traineeships in epidemiologic and statistical methods as applied to the study of psychiatric disorders; eligible students typically hold degrees in medicine, biological or social sciences, or quantitative methods, and must be US citizens or permanent residents.

Reproductive Epidemiology This area prepares students for research and teaching careers in epidemiology with a special emphasis on reproductive health in women and men. A number of relevant courses are available in the Departments of Epidemiology, Biostatistics, Environmental Health, Health and Social Behavior, Maternal and Child Health, and Population and International Health. Tutorials are often arranged to augment course offerings and to provide the opportunity for in-depth study or research experience. The curriculum for each student is tailored according to the individual's background and interests.

In addition to the course work required for the master's degree, doctoral students conduct research with faculty members who have research projects related to reproductive health. Recent students have studied the etiology of infertility, risk factors for fetal death, and the occurrence of uterine leiomyomata. Graduates have been employed in academic medicine, government agencies, non-governmental organizations, and private foundations. Students with a prior professional degree apply for the two-semester

master's degree; those with a bachelor's degree and relevant work experience apply for the four-semester master's program. Candidates interested in the doctoral program are encouraged to call to discuss potential research and funding opportunities.

Women and Health

HSPH offers a number of courses relating to women and health. For more information, see page 63.

Master of Science in Epidemiology (four-semester program)

The master's programs provide students with basic skills in epidemiologic and quantitative methods and in computing, in preparation for research or academic careers. The four-semester (80-credit) SM program is designed for individuals who hold a bachelor's degree and have a strong background in biology and mathematics. In addition to epidemiology and statistics courses, students study the basic medical sciences and the biological aspects of public health problems. The program is primarily intended for students who expect to continue toward a doctoral degree.

Required courses include EPI 201a, *Introduction to Epidemiology*; EPI 202, *Elements of Epidemiologic Research*; EPI 203c, *Design of Case-Control and Cohort Studies*; EPI 204d,

Analysis of Case-Control and Cohort Studies; BIO 201ab, *Introduction to Statistical Methods*; and BIO 210cd, *The Analysis of Rates and Proportions*. Recommended courses include EH 205ab, *Human Physiology*; BIO 211cd, *Regression and Analysis of Variance in Experimental Research*; BIO 213ab, *Applied Regression for Clinical Research*; CB 212ab, *Introduction to Cancer Biology*; TOE 204ab, *Principles of Toxicology*; DBE 208cd, *Pathophysiology of Human Disease*; and ID 265bc, *Practice of Quantitative Methods*.

Master of Science in Epidemiology (two-semester program)

The two-semester (40-credit) SM provides students with basic skills in epidemiologic and quantitative methods and in computing, in preparation for research or academic careers. Required courses include EPI 201a, *Introduction to Epidemiology*; EPI 202, *Elements of Epidemiologic Research*; EPI 203c, *Design of Case-Control and Cohort Studies*; EPI 204d, *Analysis of Case-Control and Cohort Studies*; BIO 201ab, *Introduction to Statistical Methods*; and BIO 210cd, *The Analysis of Rates and Proportions*. The remainder of the schedule reflects areas of special interest and may include supervised research. The two-semester program is open to applicants with a medical degree or master's-level background in biology.

Doctor of Science in Epidemiology/ Doctor of Public Health

The doctoral programs are designed for students who plan careers in epidemiologic research or teaching or for those who aspire to leadership roles in the health professions. Applicants to the SD program should hold at least a bachelor's degree and have a strong background in biology and mathematics. For these individuals, the degree generally takes four to five years to complete; candidates with relevant doctoral degrees may complete the program in three years. The DPH degree is available to students holding a prior doctorate and an MPH degree.

Course requirements are the same as for the SM program, with the addition of EPI 205ab, *Practice of Epidemiology*; EPI 207b, *Advanced Epidemiologic Methods*; EPI 227d, *Principles of*

Screening; and for non-physicians, EH 205ab, *Human Physiology*, and DBE 208cd, *Pathophysiology of Human Disease*. In addition, 10 credits are required in substantive courses offered by the department (EPI 211c through EPI 290s), 10 credits in biostatistics above the level of BIO 200, and 10 credits in a second minor field.

Unless courses equivalent to those described for the master's program have been taken previously, most of the first two years is devoted to course work. Subsequently, doctoral candidates must pass the departmental written examination and the school-wide oral qualifying examination; complete, defend, and submit a thesis; and gain experience in teaching and research.

Courses Offered by the Department of Epidemiology, 1997-98

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information. Either EPI 200 or EPI 201 satisfies the school-wide requirement for an introductory course in epidemiology; however, individual programs may require one or the other.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1998 summer sessions).

EPI 200. Principles of Epidemiology

EPI 200a. (Stuver, Stampfer)

EPI 200s. (Buring, I-M. Lee)

Introduces basic principles and methods of epidemiology. Lectures are complemented by seminars devoted to exercises or to the discussion of current epidemiologic studies. (2.5 credits)

EPI 201a. Introduction to Epidemiology (Rimm, Walker)

Covers principles and methods used in epidemiologic research. Designed for students majoring in epidemiology or biostatistics, or who desire a more detailed introduction to the main issues encountered in the design, implementation, and analysis of epidemiologic studies. (2.5 credits)

EPI 202. Elements of Epidemiologic Research

EPI 202b. (Spiegelman, Mittleman)

EPI 202t. (Mittleman)

Introduces elements of study design, data analysis, and inference in epidemiologic research. May serve as an introduction to more advanced study or as a concluding course for those desiring a working knowledge of epidemiologic methods. (2.5 credits)

Stephen L. Buka, SM, SM, SD (Harvard University); Assistant Professor of Maternal and Child Health and Epidemiology. Causes and prevention of behavioral and developmental disorders of children.

David C. Christiani, MD (Tufts University), SM, MPH (Harvard University); Professor of Occupational Medicine and Epidemiology and Director of the Educational Resource Center for Occupational Safety and Health; Professor of Medicine, Harvard Medical School. Occupational diseases; biomarkers and molecular epidemiology.

E. Francis Cook, MA (University of Massachusetts), SM, SD (Harvard University); Professor of Epidemiology. Epidemiologic methods; clinical epidemiology.

Marlene B. Goldman, SM, SD (Harvard University); Associate Professor of Epidemiology. Effect of environmental and occupational exposures on reproductive health; cancer epidemiology.

Susan E. Hankinson, MS, MPH (University of Minnesota), SD (Harvard University); Assistant Professor of Cancer Epidemiology. Relationships between hormonal factors and risk of breast and ovarian cancers.

David J. Hunter, MB, BS (University of Sydney), MPH, SD (Harvard University); Associate Professor of Epidemiology and Director of the Harvard Center for Cancer Prevention. Cancer epidemiology; epidemiology of AIDS.

Camara P. Jones, MD (Stanford University), PhD (Johns Hopkins University); Assistant Professor of Health and Social Behavior and Epidemiology. Development and application of epidemiologic methods to explore social stresses associated with racism.

Frederick P. Li, MD (University of Rochester), MA (Georgetown University); Professor of Clinical Cancer Epidemiology; Professor of Medicine, Harvard Medical School. Inherited susceptibility to cancer; clinical and molecular epidemiology.

Jonathan M. Mann, MD (Washington University), MPH (Harvard University); François-Xavier Bagnoud Professor of Health and Human Rights, Professor of Epidemiology and International Health, and Director of the François-Xavier Bagnoud Center for Health and Human Rights. AIDS, HIV infection, and communicable disease epidemiology. (Until January, 1998)

Richard R. Monson, MD, SM, SD (Harvard University); Professor of Epidemiology (Environmental Health and Epidemiology) Relationship between the workplace, the environment, and disease

Nancy E. Mueller, SM, SD (Harvard University); Professor of Epidemiology The role of viruses in the etiology of cancer, cancer epidemiology.

Lucas M. Neas, MSE (West Virginia College of Graduate Studies), SD (Harvard University); Assistant Professor of Environmental Health and Epidemiology Environmental determinants of respiratory symptoms and pulmonary function.

Eric B. Rimm, SD (Harvard University); Assistant Professor of Epidemiology and Nutrition. Relation of dietary factors to the occurrence of human diseases, in particular cardiovascular disease

James M. Robins, MD (Washington University); Professor of Epidemiology and Biostatistics. Development of analytic methods for drawing causal inferences from complex observational and randomized studies with time-varying exposures or treatments.

Donna L. Spiegelman, SM, SD (Harvard University); Associate Professor of Epidemiology and Biostatistics. Binary data models with measurement error and misclassification in model covariates.

Meir J. Stampfer, MD (New York University), MPH, DPH (Harvard University); Professor of Epidemiology and Nutrition. Influence of diet and exogenous hormones on health, particularly heart disease and cancer.

Sherri O. Stuver, SD (Harvard University); Assistant Professor of Cancer Epidemiology. Cancer epidemiology; virus-associated disease.

Dimitrios V. Trichopoulos, MD (University of Athens), SM (Harvard University); Vincent L. Gregory Professor of Cancer Prevention and Professor of Epidemiology. Cancer epidemiology.

Walter C. Willett, MD (University of Michigan), MPH, DPH (Harvard University); Fredrick John Stare Professor of Epidemiology and Nutrition; Professor of Medicine, Harvard Medical School. Relation of dietary factors to the occurrence of human disease, in particular heart disease and cancer.

EPI 203c. Design of Case-Control and Cohort Studies (Walker, Ascherio)

Examines common problems in the design, analysis, and interpretation of cohort and case-control studies. Considers problems of exposure and disease definitions, time-dependent effects, confounding, and misclassification, and introduces relevant statistical methods. (2.5 credits)

EPI 204d. Analysis of Case-Control and Cohort Studies (Neas, Hsieh)

Develops material presented in EPI 203c into the rationale and methodology for mathematical modeling of study parameters. Emphasizes Poisson and logistic regression. (2.5 credits)

EPI 205ab. Practice of Epidemiology (Rimm, Hankinson)

Requires students to present and discuss plans for collection and analysis of epidemiologic data. Preparatory work is done under tutorial arrangements with members of the faculty. Emphasizes conceptual issues rather than execution. (2.5 credits)

EPI 207b. Advanced Epidemiologic Methods (Robins)

Reviews classic and current readings on methodologic topics in epidemiology. Topics include options in study design, confounding, modeling, measurement error, estimation of effect, causal inference with time-dependent exposures and confounder, and analytic methods. (2.5 credits)

EPI 208st. Introduction to Clinical Epidemiology (Singer, Cook)

Covers principles and methods used in traditional and clinical epidemiologic research. (5 credits)

EPI 211c. Reproductive Epidemiology (M. Goldman)

Applies principles of epidemiology to diseases and disorders of reproduction in women and men. Considers study design and methodology in studies of reproductive health. Topics include infertility, abortion, reproductive hazards in the workplace, sexually transmitted diseases, reproductive cancers, and premature menopause. (2.5 credits)

EPI 212a. Epidemiology of Cardiovascular Diseases (Stampfer)

Reviews the epidemiology of chronic cardiovascular diseases. Presents demographic distribution and time trends of these diseases and discusses known risk factors. (1.25 credits)

EPI 213c. Epidemiology of Cancer (Mueller, Trichopoulos)

Reviews basic concepts and issues central to cancer epidemiology. Considers the descriptive epidemiology of cancer and discusses implications of the biology of cancer for identification of risk factors. Examines the role of smoking, radiation, nutrition, and other exposures. (2.5 credits)

EPI 214d. Epidemiologic Analysis of Outbreaks and Infectious Diseases (Freeman, Platt)

Discusses the use of epidemiologic methods in analyzing outbreaks and investigating infectious diseases. Illustrates different types of problems and methods of analysis and stresses literature review and practical methodology. (2.5 credits)

EPE 215. Environmental and Occupational Epidemiology

EPE 215cd. (Dockery, Neas, Xu)

EPE 215t. (Dockery, Neas, Schwartz)

Presents methods for evaluating health effects of physical and chemical agents in the environment, reviews evidence on the health effects of such exposures, and considers resulting policy questions. (2.5 credits)

EPI 216d. Epidemiology in Public Health Practice (Dicker)

Teaches the principles and practice of field epidemiology through a series of case studies. Focuses on resolving conflicts between epidemiologic theory and practical considerations which can arise while addressing public health problems in the community. (2.5 credits.)

EPI 217a. The Epidemiology of Major Psychiatric Disorders

Covers classical and recent readings on the occurrence and distribution of psychiatric illness. Describes the application of basic epidemiologic research designs to the study of psychiatric conditions. (2.5 credits) Not offered 1997-98.

EPI 218b. Risk Factors in Psychiatric Epidemiology: Genetics and Environment (Santangelo, Tsuang)

Reviews research methodology and empirical studies of genetic and psychosocial risk factors for psychiatric disorders. Topics include genetic research designs, twin studies, brain imaging, prenatal risk factors, gender and mental health, and psychosocial risk factors. (2.5 credits) Not offered 1997-98.

EPI 219c. Assessment Concepts and Methods in Psychiatric Epidemiology (Blacker)

Presents the application of basic epidemiologic and psychometric concepts and methods in psychiatric research. Topics include measurement theory, reliability, validity, screening, and diagnostic classification procedures. (2.5 credits)

EPI 220d. Psychiatric Screening and Diagnostic Tests (Murphy)

Focuses on interview schedules designed to identify psychiatric disorders and to provide diagnoses. Provides practical experience in administering and analyzing responses to diagnostic interviews and screening measures. (2.5 credits) Offered 1997-98 and alternate years.

EPI 221c. Pharmacoepidemiology (Walker)

Covers inference about the effects of pharmaceuticals from case reports, case series, vital statistics and other registration schemes, cohort studies, and case-control

studies. Discusses decision-making with inadequate data from the perspectives of manufacturers and regulators. (2.5 credits)

EPI 222d. Genetic Epidemiology of Diabetes and Its Complications (Krolewski, Warram)

Uses the genetics of diabetes and its complications, together with the descriptive epidemiology of these conditions, to illustrate the process of generating etiologic hypotheses that can be studied by the methods of genetic epidemiology. (2.5 credits) Not offered 1997-98.

EPH 224a. Cancer Prevention (Colditz)

Introduces cancer prevention and control from a broad range of disciplines. Covers epidemiology and biology of cancer, approaches to prevention through behavior change, and models of behavior change. (2.5 credits)

EPI 225c. Epidemiology of Infectious Diseases (Freeman)

Covers basic concepts and issues central to the epidemiology of infectious diseases. Topics include properties of infectious agents and the nature of host defenses, the dynamics of occurrence of communicable diseases, and the relation between human behavior and the actions of governments. (2.5 credits)

EPI 227d. Principles of Screening (Colditz, Kawachi)

Provides a basic understanding of the principles of screening. Emphasizes screening for cancer and applications in other settings. Controversies and limitations of screening strategies are discussed. (2.5 credits) Offered 1997-98 and alternate years.

EPI 228ab. Oral Epidemiology (Douglass, Joshipura)

Discusses the principal measures and methods of epidemiology as they apply to oral conditions; the distribution, etiology, and risk factors for a number of these conditions; and links between oral epidemiologic data and health policy issues. (2.5 credits) Not offered 1997-98.

EPI 229b. Ophthalmic Epidemiology (Seddon)

Reviews the epidemiology of leading causes of blindness, including cataract, macular degeneration, glaucoma, and diabetic retinopathy. Considers results from various epidemiologic study designs. (1.25 credits) Not offered 1997-98.

EPP 232b. Distribution of Infectious Diseases in Time and Space (Wilson)

Examines factors that influence the appearance, dissemination, frequency, and disappearance of infectious diseases in an area or population, including transmission mechanisms, migration, and the impact of climatic, environmental, and demographic changes. (2.5 credits) Not offered 1997-98.

EPI 236s. Advanced Methods in Clinical Epidemiology (Cook)

Examines design, measurement, and analytic issues encountered in clinical research. Focuses on analytic techniques such as stratification, multivariate modeling, and recursive partitioning. (5 credits)

EPI 240d. Use of Biomarkers in Epidemiologic Research (Hankinson, Stuver)

Provides an overview of issues pertinent to the collection, measurement, and statistical analysis of biomarker data. Topics include study-design considerations, sample storage, sources of laboratory variability, assay evolution, use of pooled samples, and repeated measures analysis. (1.25 credits) Offered 1997-98 and alternate years.

EPI 241ab. Clinimetrics (Cook)

Examines methodologic issues related to measures of health status encountered in clinical research, including generic and disease-specific measures of health, quality of life, functional status, severity of disease, and co-morbidity. (2.5 credits)

EPI 242abcd. Seminar in Clinical Epidemiology (Singer, Cook, Orav)

Draws on presentations by guest speakers to expose students to a number of clinical research projects and a variety of research designs and analytic strategies. Faculty members summarize methodologic issues pertinent to the presentations. (2.5 credits)

EPI 244a. Genetic Epidemiology of Major Psychiatric Disorders (Santangelo, Tsuang)

Presents classical and current research methodology for genetic epidemiologic studies of complex (non-Mendelian) disorders as applied to major psychiatric disorders. Topics include phenotype definition, Mendelian genetics, design and analysis of family, twin, and adoption studies, heritability estimation, segregation analyses, and linkage analyses methods. (2.5 credits) Offered 1997-98 and alternate years.

EPI 245b. Epidemiology: Principles and Methods (Trichopoulos, Joshipura)

Emphasizes the principles and concepts needed for epidemiologic research. Teaches students to choose between alternative study designs and analytical options, and how to integrate biomedical and epidemiologic considerations. (2.5 credits)

EPI 247a. Epidemiologic Methods Development—Past and Present (Mittleman)

Provides students with an understanding of the theoretical basis of currently used epidemiologic methods and helps students acquire an understanding of the process of developing new approaches by reviewing classic papers and tracing the evolution of epidemiologic ideas. (2.5 credits)

EPT 249a. Molecular Biology for Epidemiologists (Glassner, Hunter)

Offers an overview of molecular biology and presents molecular biological techniques commonly used in the laboratory and in epidemiologic research. Topics in-

Xiping Xu MD (Anhui Medical University, China), PhD (University of Tsukuba, Japan), SM (Harvard University); Associate Professor of Occupational Epidemiology; Associate Professor of Medicine, Harvard Medical School. Environmental, occupational, and genetic epidemiology of respiratory, cardiovascular, and metabolic diseases.

Gwendolyn E. P. Zahner, SM (Harvard University), PhD (Yale University); Assistant Professor of Epidemiology. Psychiatric epidemiology. (Until January, 1998)

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School, unless otherwise indicated.

Deborah Blacker, MD, SD (Harvard University); Assistant Professor in the Department of Epidemiology. Genetic epidemiology of affective disorders and of Alzheimer's disease.

Julie E. Buring, MS (University of Washington), SD (Harvard University); Associate Professor in the Department of Epidemiology. Epidemiology of cardiovascular disease and cancer; teaching of epidemiology; epidemiologic methodology.

Graham A. Colditz, MB, BS (University of Queensland), MPH, DPH (Harvard University); Associate Professor in the Department of Epidemiology. Cancer epidemiology; diet and chronic diseases.

Chester W. Douglass, DMD (Temple University), MPH, PhD (University of Michigan); Professor in the Department of Epidemiology. Primary affiliation: Harvard School of Dental Medicine. Oral epidemiology and health policy.

Robert H. Fletcher, MD (Harvard University), MSc (Johns Hopkins University); Professor in the Department of Epidemiology. Clinical epidemiology.

Suzanne W. Fletcher, MD (Harvard University), MSc (Johns Hopkins University); Professor in the Department of Epidemiology. Clinical epidemiology.

Jonathan Freeman, SM, SD (Harvard University), MD (Duke University); Assistant Professor in the Department of Epidemiology. Infectious diseases, especially nosocomial infections.

Charles H. Hennekens, MD (Cornell University), MPH, SM, DPH (Harvard University); Professor in the Department of Epidemiology. Epidemiology of cardiovascular disease, cancer, and infectious diseases

Kaumudi J. Josphipura, SM, SD (Harvard University); Assistant Professor in the Department of Epidemiology. Oral epidemiology. Primary affiliation: Harvard School of Dental Medicine

Andrzej S. Krolewski, MD, PhD (Warsaw Medical School); Associate Professor in the Department of Epidemiology. Diabetes mellitus epidemiology

I-Min Lee, MB, BS (National University of Singapore), MPH, SD (Harvard University); Assistant Professor in the Department of Epidemiology. Epidemiology of cancer, physical activity and fitness and cancer incidence.

Thomas H. Lee, Jr., MD (Cornell University), SM (Harvard University); Associate Professor in the Department of Epidemiology. Prognostic stratification in, and cost-effectiveness analysis of, management of cardiovascular disease.

JoAnn E. Manson, MD (Case Western Reserve University), MPH, DPH (Harvard University); Associate Professor in the Department of Epidemiology. Chronic disease epidemiology.

Jane M. Murphy, PhD (Cornell University); Professor in the Department of Epidemiology. Longitudinal studies of psychiatric epidemiology in general populations.

Johanna M. Seddon, MD (University of Pittsburgh), SM (Harvard University); Associate Professor in the Department of Epidemiology. Ophthalmology.

Daniel E. Singer, MA (Oxford University), MD (Harvard University); Associate Professor in the Department of Epidemiology. Preventive health care

Ming T. Tsuang, MD (National Taiwan University), PhD (University of London); Professor in the Department of Epidemiology. Follow-up and family studies of psychiatric disorders with emphasis on schizophrenia and affective disorders.

Mary E. Wilson, MD (University of Wisconsin); Assistant Professor in the Departments of Population and International Health and Epidemiology. Infections acquired during travel and residence in tropical and developing countries.

clude the structure of DNA and genes, DNA replication, transcription, and RNA translation. (2.5 credits)

EPI 250c. Studies in Molecular Epidemiology (Hunter)

Acquaints students with recent developments in molecular epidemiology, including molecular markers of environmental exposures, applications to risk assessment, and genetic markers of susceptibility. Applications cover cancer, cardiovascular disease, and infectious diseases. (1.25 credits)

EPI 251b. Molecular Epidemiology of Cancer (Li)

Offers an overview of the molecular genetics and epidemiology of cancer, emphasizing the use of new laboratory techniques in epidemiologic studies. Discusses the application of epidemiologic methods to the generation of new etiologic hypotheses. (1.25 credits)

EPI 252d. Epidemiology of Virus-Associated Malignancy (Mueller, Stuver)

Reviews the epidemiology and public health impact of virus-associated malignancy. Discusses the role of host response and the use of serology and viral probes as risk markers. (1.25 credits) Offered 1997-98 and alternate years.

EPI 283f. Topics in Cancer Epidemiology (Mueller)

Reviews key papers in cancer epidemiology, emphasizing the use of biologic markers and study design issues. (1 credit)

EPI 290s. Diagnosis of Major Psychiatric Disorders in a Clinical Setting

Familiarizes students with a contemporary biomedical approach to psychiatric practice through a summer rotation in a clinical psychiatric setting. Emphasizes both clinical epidemiologic research and diagnosis of major psychiatric disorders. (2.5 credits) Not offered 1997-98.

EPI 310. Research in Clinical Epidemiology (Cook)

Fulfills the clinical research requirement for students concentrating in Clinical Epidemiology who intend to complete the requirements for the SM during summer study. The research project is determined by the faculty member assigned as principal advisor to the student. (Credit to be arranged)

Independent Study

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research or to undertake specialized readings or studies.

Adjunct Faculty

Hans-Olov Adami, MD, PhD; Professor of Cancer Epidemiology, University Hospital, Uppsala, Sweden.

Richard C. Dicker, MD, SM, Chief Medical Officer/Epidemiology Team Leader, Division of Health and Standards and Quality, Health Care Financing Administration.

Anders Ekblom, MB, MD, PhD; Associate Professor of Surgery, University Hospital, Uppsala, Sweden.

Chung-cheng Hsieh, MPH, SM, SD; Lecturer, Division of Biostatistics and Epidemiology, University of Massachusetts Medical Center.

Carlo LaVecchia, MD, MSc; Associate Professor, Medical Statistics and Biometrics Department, University of Milan.

K. Malcolm Maclure, SM, SD; Epidemiologist, Ministry of Health, Province of British Columbia, Canada.

Ralph S. Paffenbarger, Jr., MD, DrPH; Professor of Epidemiology, Emeritus, Stanford University.

Kenneth J. Rothman, DMD, MPH, DPH; Professor, Departments of Epidemiology and Community Medicine, Boston University.

Susan L. Santangelo, SD; Assistant Professor, Department of Psychiatry, New England Medical Center at Tufts University School of Medicine.

Department of Health and Social Behavior

As both a philosophical stance and a practical reality, the Department of Health and Social Behavior views the social environment as a major determinant of health and behavior. Research is therefore anchored in social settings, such as communities, schools and colleges, workplaces, and health care delivery systems. Members of the department have ongoing research projects in each of these settings, organized by risk (social networks, socio-economic status, drug and alcohol use, diet, physical activity), by disease (cancer, cardiovascular and neurological diseases, arthritis, asthma, AIDS), and/or by population (children, adolescents, older men and women). Recognizing the importance of public health communication, the department also emphasizes the role of interpersonal, small group, written, and mass media communications in all of its work.

The department's educational mission is to train both scholars and practitioners: scholars whose research will illuminate basic social determinants of health and who will identify and test innovative social interventions, and practitioners who are skilled in designing, implementing, and evaluating health-enhancing interventions in action settings and who appreciate the social ecology of health behavior as well as social and policy leverage points.

The mission of the Department of Health and Social Behavior is to advance and apply new knowledge from the social and behavioral sciences to the solution of pressing public health problems. The department is working to understand the social and behavioral factors that challenge the health of populations and to develop interventions that can improve health and the quality of life.

All students in Health and Social Behavior are required to take (at minimum) the school-wide requirements in biostatistics and epidemiology; students in SM programs must also fulfill core requirements in environmental health and health policy/management. In addition, the department requires two core courses: HMP 200c, *Social and Behavioral Dimensions of Public Health*, and HSB 201a, *Society and Health*. Beyond these core requirements, students may wish to concentrate their work on the conceptual models of relationships between social forces and health, or on the design and evaluation of interventions for healthful change. Students are urged to work closely with their advisors to delineate education and career goals and plan a course of study. To facilitate this effort, the department has iden-

Professor and department chair Lisa Berkman is interested in the effects of aging and the influence of social networks on health.

Faculty

Department Chair: Lisa F. Berkman, MS, PhD (University of California, Berkeley), Florence Sprague Norman and Laura Smart Norman Professor of Health and Social Behavior and of Epidemiology Social epidemiology; epidemiology of aging.

H. William DeJong, MA, PhD (Stanford University); Lecturer on Health Communication. Use of mass media for health promotion; alcohol and tobacco control policies; drunk driving prevention; violence prevention; organ donation.

Karen M. Emmons, MA, PhD (State University of New York at Stony Brook); Associate Professor of Health and Social Behavior Health promotion; smoking and environmental tobacco smoke health effects; worksite and community-based interventions.

Thomas A. Glass, MA, PhD (Duke University); Assistant Professor of Health and Social Behavior. Psychosocial epidemiology; behavioral intervention models; gerontology; medical sociology.

Steven L. Gortmaker, SM, PhD (University of Wisconsin); Senior Lecturer on Sociology. Statistical evaluation methods; social class and infant and child health; obesity and television viewing; AIDS; chronic disease.

S. Jody Heymann, MPP, MD, PhD (Harvard University); Assistant Professor of Health and Social Behavior; Assistant Professor of Health Care Policy, Harvard Medical School. Influence of social, labor, and welfare policy on health; health-care policy for high-risk children with chronic conditions.

Camara P. Jones, MD (Stanford University), PhD (Johns Hopkins University); Assistant Professor of Health and Social Behavior and Epidemiology Development and application of epidemiologic methods to explore social stresses associated with racism.

Ichiro Kawachi, MB, ChB, PhD (University of Otago, New Zealand), DipCommH (College of Community Medicine of New Zealand); Associate Professor of Health and Social Behavior Social inequalities in health, especially related to income distribution; stress and cardiovascular disease; quality of life and healthy aging; tobacco control.

tified two general tracks of study. Each year, the department offers several courses and tutorial opportunities in each of these areas of concentration.

Social Determinants of Health This concentration focuses on analysis of the major social conditions that affect the health of populations. Seminars, tutorials, and courses enable students to explore a range of health consequences of various social factors by studying varied subgroups, at different times and places, under diverse and changing conditions. Students examine mechanisms and processes through which social factors exert their impact, as well as mechanisms that mediate or moderate relationships between social factors and health outcomes.

Program Design and Planned Social Change This concentration focuses on the application of theory in the design of intervention programs as well as on research and evaluation methodology. Attention is given to the following design steps: problem diagnosis, assessment, formative research, program design, and evaluation. The social settings for interventions may include communities, workplaces, schools and colleges, and health care facilities. Populations of interest include those who are underserved, marginalized, and in special need. Targeted populations may be segmented by age, gender, socioeconomic status, ethnicity, and geographic location. Intervention strategies include community organizing and improvement, social marketing, communication, adult learning approaches, and advocacy.

Women and Health

HSPH offers a number of courses relating to women and health. For more information, see page 63.

Osula Rushing earned a bachelor's degree in sociology at Spelman College in Atlanta. Along the way, she discovered within herself a desire to help people. "One day I was walking to school in Atlanta," she says, "and I saw a homeless man. I wanted to be polite, so I asked him how he was. He responded bitterly: 'How do you think I am!' I realized that I really hadn't thought about how he was; and after I started thinking about how he was, I went on to think about how others in similar situations were; and why they were in those situations; and how many people were in those circumstances."

Osula's interest is in helping people with HIV and AIDS, and women escaping abusive relationships. While earning her master's degree at HSPH, she has worked on a community campaign called "Sisters Together" that promotes physical activity and healthy eating among African-American women in three cities adjacent to Boston. What are her plans after graduating? "The big answer is I plan to change the world," she says. "And the smaller answer is that I'll do it by designing community-based programs to improve people's health."

As described below, the department offers both a four-semester and a two-semester Master of Science (SM) program, as well as a program leading to the Doctor of Science (SD) or Doctor of Public Health (DPH) degree. Please refer to page 8 for information about the Master of Public Health concentration in Family and Community Health.

Master of Science in Health and Social Behavior (four-semester program)

The four-semester master's program prepares students for work in a variety of community, public, and private settings with a focus on program design, supervision, and evaluation, and for work as members of research teams. For example, one recent graduate focuses on the implementation and evaluation of social marketing programs; another is a member of a research team examining measurement issues related to quality of life.

Students enter the four-semester program with a background (often a major) in the social/behavioral sciences and experience in the field.

Of the 80 credits necessary to earn the four-semester SM, at least 20 must be earned in departmental courses. Students in this program must also fulfill core requirements in biostatistics.

tics, epidemiology, environmental health, and health policy/management. Students are encouraged to delineate professional goals and to develop an area of expertise. They often focus on a subject area (such as AIDS, addiction, cardiovascular risk reduction, environmental health) and/or a skill area (such as program design, program evaluation, communication, marketing). Master's students are encouraged to declare an area of concentration within Health and Social Behavior and to complete an internship as part of their training.

Master of Science in Health and Social Behavior (two-semester program)

The two-semester master's program also prepares students for work in a variety of community, public, and private settings with a focus on program design, supervision, and evaluation, and for work as members of research teams. One recent graduate is serving as the evaluator on a violence prevention program for adolescents; another works with a nonprofit organization coordinating international efforts related to women's health.

Students enter the two-semester program with a graduate degree in a related field.

Of the 40 credits necessary to earn the two-semester SM, at least 15 must be earned in departmental courses. Students are encouraged to focus their work in a specific content or skill area. They should work closely with their advisors to develop a study plan early in the fall semester.

Doctor of Science in Health and Social Behavior/Doctor of Public Health

The doctoral programs train students as scholars and researchers who will identify new social and behavioral risks, who will test innovative social interventions, and as practitioners who will design, implement, and evaluate health-enhancing interventions. Recent graduates are working in research and academic settings.

Doctoral programs are offered in two concentrations: social determinants of health and program design and planned social change. All students enter the doctoral programs with a strong foundation in the social and behavioral sciences and with an earned master's degree.

Students must fulfill the residency requirements and complete course work by taking a minimum of 40 credits in graduate-level courses, distributed over one major (a minimum of 20 credits within Health and Social Behavior) and two minor fields (a minimum of 10 credits in each field). They are expected to augment the basic requirements in epidemiology and biostatistics with substantial course work appropriate for a research orientation. In addition, doctoral students are required to take HSB 215ab, *History, Politics, and Public Health: Theories of Disease Causation across Time and Culture*; HSB 221cd, *Psychosocial Theories of Health and Health Behavior*; HSB 240ab, *Social and Behavioral Research Methods I*; HSB 241cd, *Social and Behavioral Research Methods II*, or an equivalent course; and HSB 270cd, *Doctoral Seminar on Health and Social Behavior* (taken each year of study).

Doctoral candidates must pass the departmental written examination and the school-wide oral qualifying examination and must complete, defend, and submit a thesis based on original research.

Courses Offered by the Department of Health and Social Behavior, 1997-98

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1998 summer sessions).

HMP 200c. Social and Behavioral Dimensions of Public Health (Berkman, Buka, Jorjes, Obermeyer)

Introduces fundamental social and behavioral science concepts, methods, and theories needed to understand social influences on health status. Emphasizes quantitative and qualitative research methods in social sciences applied to observational and intervention-oriented studies. (2.5 credits)

HSB 201a. Society and Health (Kawachi)

Analyzes major social variables that affect population health: poverty, social class, gender, race, family, community, work, behavioral risks, and coping resources. Examines health consequences of social and economic policies, and the potential role of specific social interventions. (2.5 credits)

For more information about research and training in Health and Social Behavior, please contact Loretta LaFratta, Department of Health and Social Behavior, 677 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-1135
Fax: 617-432-3755

Nancy Krieger, MS (University of Washington), PhD (University of California, Berkeley); Assistant Professor of Health and Social Behavior. Social inequalities in health, especially regarding race/ethnicity, social class, and gender; cancer, especially breast cancer; cardiovascular disease, especially hypertension; epidemiologic theory and history.

Rima E. Rudd, MSPH (University of Massachusetts), ScD (Johns Hopkins University); Lecturer on Health Education. Public health and adult education pedagogy; normative change and change strategies, including small group communications, community organizing, social marketing, and health and literacy.

Glorian Sorensen, MPH, PhD (University of Minnesota); Associate Professor of Health and Behavior. Cancer prevention in the workplace; intervention research in community and occupational settings.

Henry Wechsler, AM, PhD (Harvard University); Lecturer on Social Psychology. Alcohol and drug use and related high-risk behaviors among youth; epidemiologic, preventive, and public policy approaches to substance abuse prevention.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School

Paul D. Cleary, MS, PhD (University of Wisconsin); Professor in the Department of Health and Social Behavior. Effectiveness of behavior change programs; design and use of patient reports on the quality and outcomes of medical care.

Lawren H. Daltroy, MPH (University of Michigan), DrPH (Johns Hopkins University); Assistant Professor in the Department of Health and Social Behavior. Application of social psychology and decision-making theory to patient education in chronic disease; functional status measurement in arthritis.

Thomas S. Inui, MD, ScM (Johns Hopkins University), Professor in the Department of Health and Social Behavior. Primary care effectiveness, health-related behavior, clinical prevention.

Sue Ellen Levkoff, MSW (New York University), SM, SD (Harvard University). Associate Professor in the Department of Health and Social Behavior. Influence of culture on the experience of and response to dementia symptoms; prevention of excess disability in cognitively impaired aged; delirium in the hospitalized elderly.

Adjunct Faculty

Anne M. Stoddard, SM, SD; Associate Professor of Public Health, University of Massachusetts.

Diana Chapman Walsh, MS, PhD; President, Wellesley College.

John E. Ware, Jr., MA, PhD; Senior Scientist, The Health Institute, New England Medical Center.

Lecturer Rima Rudd with a display from the "Sisters Together" community campaign to promote healthier diets and physical activity among African-American women in and around Boston.

HSB 202b. Innovative Strategies in Health Education (Rudd)

Highlights issues of control, participation, efficacy, and empowerment with an emphasis on theory, design, and evaluation. Focuses on the development of theory-based health education strategies for change. (2.5 credits)

HSB 204b. Communication in Health Care Settings (Daltroy)

Focuses on theory and practice of health education in the clinical encounter: doctor-patient communication, patient education, adherence to medical regimen, and cognition and behavioral skills in chronic disease co-management. (2.5 credits)

HSB 205a. Teaching and Working with Groups (Rudd)

Uses role play and reflective analysis to help participants develop listening skills, experiment with activities that build group cohesion and trust, and focus on group maintenance as well as task-oriented roles. (2.5 credits) Not offered 1997-98.

HSB 206d. HIV, Transmission, and Social Behavior (Gortmaker)

Examines and analyzes behavior in light of the HIV epidemic in the US. Covers stigma, taboo, identity, sexual and drug-using behaviors, and the social construction and production of behavior. (2.5 credits)

HSB 207b. "Race" and Racism (Jones)

Explores the roles of "race" and racism in relation to health outcomes in the US. Topics include the history of the concept of "race," the use of "race" in scientific research, and the role of "race" as a social risk factor. (2.5 credits)

HSB 208d. Public Health Practice for Social Change (Rudd, C. Ryan)

Builds on dialogues with innovative community leaders to explore approaches used in public health practice. Emphasizes the experience of grassroots activists and the challenges to effective and responsible public health practice posed by social and economic inequalities. (2.5 credits) Not offered 1997-98.

HSB 211b. Health Promotion through the Mass Media (DeJong)

Covers the development of public communication campaigns in the field of health promotion: assessing the mass media's potential for health promotion, designing mass communication materials consonant with behavioral science principles and the public health model, and executing a media campaign. (2.5 credits)

HSB 212cd. Developing Radio Communications (DeJong)

Covers the development and use of radio communications in public health. Participants create an original radio commercial, moving from background research to scripting and final production. (2.5 credits)

HSB 214cd. Health and Literacy Practicum (Rudd)

Introduces linkages between health and literacy and between health and adult education theory and methods. Participants hone skills in materials assessment and group interviewing as they engage in structured field work. (5 credits)

HSB 215ab. History, Politics, and Public Health: Theories of Disease Causation across Time and Culture (Krieger)

Focuses on social and scientific contexts, content, and implications of theories of disease causation from diverse periods in history and various cultures. Teaches students a historical and critical perspective of current theories of disease causation. (5 credits)

HSB 216e. Use of Media to Work and Fight for Better Health Around the World (Berkman)

Presents theories of electronic communication and strategies of media lobbying. Reviews collected audio and video recordings made by important media thinkers. (1.25 credits)

HSB 217cd. Disaster Management (Pierce, Leaning)

Prepares those responsible for on-the-scene, immediate acute intervention during disasters by focusing on decision-making under stress. Examines case studies within the theoretical framework of disaster planning, response, and assessment. (2.5 credits)

HSB 218c. Organizational and Community Approaches to Health Promotion (Sorensen)

Examines health promotion/education intervention with a focus on organizations, worksites, and communities. Applies social science principles with emphasis on both individual and organizational approaches to health promotion and health behavior change. (2.5 credits)

HSB 219f. Community-Oriented Primary Care (Jones, Schlaff)

Introduces the concept of community-oriented primary care (COPC) in which a health care facility takes on the community as a patient. (1.25 credits)

HSB 220cd. An Introduction to High-Risk Behaviors: Epidemiology, Prevention, and Public Policy (Wechsler)

Examines behaviors that place an individual at higher risk of morbidity and mortality. Focuses on epidemiology of smoking, alcohol abuse, drug abuse, gambling, inactivity, lack of proper nutrition, violence, accidental injury, unsafe driving, and unsafe sex. (5 credits)

HSB 221cd. Psychosocial Theories of Health and Health Behavior (Emmons, Daltroy)

Explores theoretical approaches to health-related behavior change, emphasizing the use of psychosocial theories in research. Theories include the health beliefs model, reasoned action, planned behavior, social learning, and the transtheoretical model. (5 credits)

HSB 222c. Alcohol Abuse and Alcoholism from a Public Health Perspective (Wechsler)

Covers the nature and scope of alcoholism and alcohol abuse as a public health problem; patterns of use and abuse; diagnosis and medical complications; and treatment. (2.5 credits)

HSB 225d. Health and Social Policy in the Workplace (Heymann)

Explores ways that workplace health and social policies create a positive or negative effect on the health and welfare of individuals, families, and communities. (2.5 credits)

HSB 226c. Gender and Health

Focuses on the social determinants of gender differences in health. Topics include women's representation in medical research and health consequences of gender stratification in the workplace. (1.25 credits)

HSB 227d. Principles for Designing Health Interventions (Rudd)

Introduces a disciplined and theory-based approach to program planning and evaluation. Topics include community assessment, program design, and a three-staged evaluation for programs of planned social change. (2.5 credits)

HSB 228a. Psychosocial Aspects of Aging (Glass)

Presents the range of social, psychological, and ethical issues related to human aging and discusses the roles that public health could play in influencing the consequences of population aging. Topics include institutionalized perceptions of aging and the elderly and productivity and vitality in late life. (2.5 credits)

HSB 240ab. Social and Behavioral Research Methods I (Gortmaker)

Covers aspects of social and behavioral research methods, including research design, measurement, sampling, data collection, and testing causal theories. (5 credits)

HSB 241cd. Social and Behavioral Research Methods II (Glass, Berkman)

Provides students with an opportunity to develop a research protocol following NIH format, including describing the sample, measures, study design, and analytic techniques. Students will prepare written proposals for field methods, budgets, and budget justifications for review according to the format of an NIH visit. (5 credits)

HSB 249b. Approaches to International Tobacco Control (Kawachi, Emmons)

Prepares students to apply training in epidemiology, statistics, management, and policy to the development of public health programs to curb tobacco use. Topics include tobacco industry global structure, marketing, and political strategies. (2.5 credits) Offered 1997-98 and alternate years.

HSB 250b. Inequality and Health (Kawachi, Kennedy)

Reviews, from economic, political, and sociologic perspectives, the major theories of social stratification; examines the epidemiologic evidence on social class, gender, and racial disparities in health and illness; and develops an interdisciplinary approach to analyzing the problem of inequality. (2.5 credits) Not offered 1997-98.

HSB 270cd. Doctoral Seminar on Health and Social Behavior (Gortmaker)

Outlines the major questions pursued by contemporary researchers in the field, focusing on underlying theoretical frameworks. Provides a forum for doctoral students to discuss their research ideas and plans, including their theoretical perspectives. (1.25 credits)

HSE 282t. Outcomes Measurement (Inui, Cook)

Emphasizes concepts, methods, and measures for assessing patients' health status and outcomes of care. Reviews qualitative and quantitative approaches to understanding and assessing outcomes. (2.5 credits)

Independent Study, Field Experience

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research, undertake specialized readings, perform field projects, or carry out independent studies in the following areas: health inequalities, cardiovascular disease, social epidemiology (Kawachi); activity, inactivity, and obesity, AIDS-related studies, poverty and child health (Gortmaker); alcohol abuse, illicit drug use (Wechsler); health and literacy, social marketing, program evaluation, social change and change agents (Rudd); worksite health promotion, community-based cancer prevention (Sorensen); patient-provider communication (Daltroy); mass media studies, media advocacy and community development, mass communications studies (DeJong); qualitative research in community settings (Emmons).

Department of Health Policy and Management

The Department of Health Policy and Management is a mission-oriented department concerned with improving the health care delivery system and mitigating public health risks in the United States and abroad. The department is dedicated to resolving major management and health policy problems through original research, advanced training, and dispute resolution.

Deborah Prothrow-Stith, professor of public health practice and associate dean for faculty development, has led the way in viewing the problem of violence as a public health concern with public health solutions.

Research priorities in the Department of Health Policy and Management are organized into eight broad areas: *health financing and insurance*, including the creation of new physician payment systems and the design of public policies dealing with rising insurance premiums; *management of health hazards*, for example by using risk assessment to set priorities for environmental health protection; *management of health care organizations*, including the application of corporate strategic planning concepts to the challenges faced by health systems and pharmaceutical firms; *management and evaluation of medical technology*, including the meta-analysis of data from clinical trials; *business and labor in health*, including the negotiation of oc-

cupational safety and health care benefits in the collective bargaining process; *international health*, including evaluation of the cost-effectiveness of health programs in developing countries; *quality of health care*, including the design of better methods to measure quality; and *health care reform*, which includes the development of partnerships between the department and the corporate community to explore critical aspects of health policy and management.

The department's problem-solving orientation is exemplified by its strong ties to leading health practitioners in hospitals, HMOs, community health centers, health advocacy groups, corporate medical departments, health and environmental consulting firms, state and local health departments, legislative committees, federal regulatory agencies, and international agencies. Practical problem-solving skills are emphasized by an interdisciplinary faculty that includes management specialists, decision analysts, accountants, physicians, lawyers, policy analysts, economists, political scientists, and program evaluators.

The department has developed an effective job placement mechanism for its students that includes numerous contacts with potential employers on a national scale. Practitioners are invited to the department to discuss their work and career paths, and a system of faculty networking and professional contacts is used to link students with a broad range of health policy makers and executives.

As described below, the department offers both a four-semester and a two-semester Master of Science (SM) program, a Doctor of Science (SD) program, and participates in a university-wide Doctor of Philosophy (PhD) program in health policy, offered under the auspices of the Graduate School of Arts and Sciences. In addition, the department cosponsors study in Environmental Science and Risk Management with the Department of Environmental Health (see page 28). Please refer to page 8 for information about the Master of Public Health concentrations in Health Care Management, Family and Community Health, and Law and Public Health.

Master of Science in Health Policy and Management (four-semester program)

The four-semester SM program is designed for students who are building professional careers in health-related fields and who aspire to leadership roles in the public or private sector. The program emphasizes professional skills and concepts, a solid grounding in the substance of health problems, rigorous quantitative training, and a curriculum that combines professional, academic, and clinical activities. Acquired knowledge is applied to practical situations through a required summer internship program and an applied field research program. Recent graduates have taken such positions as research analyst for Mathematica Policy Research and Public Opinion Strategies, executive assistant to the president of Roxbury Comprehensive Community Health Center, consultant with APM, Inc. and Price Waterhouse, as well as positions with Blue Cross/Blue Shield, Neighborhood Health Plan, Harvard Pilgrim Community Health, and Kaiser Permanente. Others have gone on to doctoral programs.

Applicants come from a wide variety of undergraduate fields. They are expected to have work experience and an academic record, particularly in quantitative and analytical courses, that suggest outstanding potential in the areas of health policy and management. Applicants should have at least two years of relevant post-baccalaureate work experience in the health field; exceptions are occasionally made for outstanding candidates. Deferred admission is available for applicants who demonstrate strong potential but

who lack sufficient professional experience in the health sector. These applicants work within the health field in positions approved by the program for a minimum of one year before matriculating.

Of the 80 credits necessary to earn the SM, required courses account for 30 to 35. All students take courses in epidemiology, statistics, environmental health, health and social behavior, and economics. In addition, students must satisfy the requirements of at least one of the five concentrations described below. The *Guide to the Two-Year Master of Science Program*, available from the department, describes the requirements for each area of interest and lists courses throughout the university that are pertinent to each area of interest.

Management of Health Care Organizations

This area of interest is designed for students pursuing management careers in public or private sector health care institutions. The course work gives students a range of managerial skills, including planning, marketing, managed care, financial analysis, cost accounting, budgeting, strategic planning, information systems, operations management, payment systems, and organizational behavior, and tailors the use of these skills to the health care setting.

Required courses for this area include EPI 200 or 201a, introductory epidemiology; BIO 200 or 201ab, introductory biostatistics; BIO 225c, *Multiple Regression Analysis for HPM*; HPM 205 or 206ab, *Economic Analysis for Public Health*; a course in both environmental health and health and social behavior; and HPM 290abcd, *Applied Research and Practice in HPM*; plus an additional 12.5 credits from a list of selected courses on management and analysis.

Management of Health Hazards This area of interest is designed for students who wish to become involved in the formulation of disease and injury prevention policies for corporations, labor unions, public interest groups, public sector agencies, or legislative committees.

Required courses for this area include EPI 200 or 201a, introductory epidemiology; BIO 200 or 201ab, introductory biostatistics; BIO 225c, *Multiple Regression Analysis for HPM*; HPM

For more information about SM and SD programs in Health Policy and Management, please contact Kristine L. Forsgard, Deputy Director of Academic Programs, Department of Health Policy and Management, 677 Huntington Avenue, Boston, MA 02115. Phone: 617-432-4511 Fax: 617-432-4494 E-mail: kforsgar@sph.harvard.edu

Oliver Sangha was born and raised in Germany, where he received his medical degree from Johannes Gutenberg University. "In my medical training," said Oliver, "I was stunned by how little we know about human health despite the tremendous advances of the past decades. One of the reasons I came to this doctoral program at HSPH was because I wanted to learn more about the methodologies of identifying factors that influence people's

health. David Hemenway's course was an eye-opening introduction to the economic issues underlying health care."

Oliver recently accepted an appointment as an adjunct faculty member in clinical epidemiology and health services research at the University of Munich, where he will continue research in health policy and clinical epidemiology.

206ab, *Economic Analysis for Public Health*; HPM 221, *Management in Public Health in Industrialized Countries*; a course in both environmental health and health and social behavior; and HPM 290abcd, *Applied Research and Practice in HPM*. The variety of recommended electives permits students to acquire additional skills in areas such as epidemiology and quantitative policy analysis and to develop specialties in specific health problems such as AIDS, substance abuse, environmental pollution, and injury control.

Environmental Science and Risk Management

Studies in Environmental Science and Risk Management, sponsored jointly with the Department of Environmental Health, are available in a four-semester SM and an SD degree program. This area is intended for students who are interested in pursuing professional careers in the public or private sector, especially those students interested in solving problems at the interface between environmental science and public policy. Please refer to page 28 for more information.

Health Financing and Insurance This area of interest is designed for students who are planning careers in the private or public sector in which analytical skills in economics, accounting, and finance are critical to management or policy decisions. This area provides comprehensive instruction in all areas of health finance and insurance.

Required courses include EPI 200 or 201a, introductory epidemiology; BIO 200 or 201ab, introductory biostatistics; BIO 225c, *Multiple Regression Analysis for*

HPM; HPM 206ab, *Economic Analysis for Public Health*; HPM 219a, *Financial Transactions and Analysis*; HPM 220b, *Financial Management and Control*; HPM 243c, *Health Economics: Economic Analysis of the Health Care System*; HPM 255d, *Payment Systems in Health Care*; a course in both environmental health and health and social behavior; and HPM 290abcd, *Applied Research and Practice in HPM*. Recommended elective courses include those on economics of the health sector, cost-benefit analyses of health programs, the role of government in the health care system, and business and labor in the health system.

Health Research and Analysis This area of interest is designed for students looking toward doctoral education and research careers in fields such as health economics, quality of care, technology assessment, health decision analysis, cost-effectiveness analysis, cost-benefit analysis, and advanced statistical analysis.

Required courses for this area include EPI 201a, *Introduction to Epidemiology*; BIO 200 or 201ab, introductory biostatistics; BIO 225c, *Multiple Regression Analysis for HPM*; HPM 206ab, *Economic Analysis for Public Health*; HPB 280b, *Decision Analysis for Health and Medical Practices*; HPM 286s, *Decision Analysis in Clinical Research*; a course in both environmental health and health and social behavior; and HPM 290abcd, *Applied Research and*

Practice in HPM. Recommended elective courses include those on survey research, epidemiologic research, economic analysis, financial analysis, and quality assessment. Second-year students are encouraged to enroll in relevant courses at Harvard Business School, John F. Kennedy School of Government, and Harvard Graduate School of Education.

International Health This area of interest is designed for students with prior international experience and relevant foreign language skills who are interested in management or policy careers in developing countries or in organizations that work extensively abroad. This area is linked to broader international health programs in the school.

Required courses for International Health include EPI 200 or 201a, introductory epidemiology; BIO 200 or 201ab, introductory biostatistics; BIO 225c, *Multiple Regression Analysis for HPM*; HPM 205 or 206ab, *Economic Analysis for Public Health*; HPM 219a, *Financial Transactions and Analysis*; HPM 220b, *Financial Management and Control*; PIH 211b, *Financial Control in Health Organizations*, or ID 262a, *Practice of International Health*; a course in both environmental health and health and social behavior; and HPM 290abcd, *Applied Research and Practice in HPM*. Recommended elective courses include those on infectious disease control, demography, and political economy. Second-year students are encouraged to enroll in relevant courses at the John F. Kennedy School of Government.

Women and Health

HSPH offers a number of courses relating to women and health. For more information, see page 63.

Master of Science in Health Policy and Management (two-semester program)

The two-semester SM program is designed for students pursuing research careers in public or private sector health care institutions, particularly for physicians (and other candidates with relevant advanced degrees) who desire an intensive exposure to analytic and quantitative skills. The degree is appropriate for students interested

in either domestic or international research questions. Recent graduates have taken research positions at academic medical centers and other health care organizations.

Applicants generally hold graduate medical or other professional degrees and have significant experience in health services. They typically expect to devote a substantial portion of their careers to research, particularly in areas such as health services research, cost-effectiveness analysis, and clinical decision-making.

Required courses for the degree include BIO 200 or 201ab, introductory biostatistics, or BIO 206st, *Statistical Principles in Medical Research*; EPI 200 or 201a, introductory epidemiology, or EPI 208st, *Introduction to Clinical Epidemiology*; up to 10 tutorial credits; and an additional 10 credits in courses within the department. Recommended electives include upper-level courses in biostatistics, epidemiology, health economics, health services research, health decision sciences, quality improvement, technology assessment, and program evaluation.

Doctor of Science in Health Policy and Management

The SD program in Health Policy and Management is designed for physicians and lawyers who are interested in doctoral-level research training in health policy, and who are committed to applied, interdisciplinary research. The program prepares graduates to perform research in the academic or professional realm.

Candidates complete a set of required courses in epidemiology, biostatistics, decision science, economics, program evaluation, political analysis, public health law (lawyers only), and health and social behavior. In addition, each student works closely with a faculty advisor to develop

Professor and chair Arnold Epstein is a practicing physician at Brigham and Women's Hospital with research interests in access and quality of care.

Postdoctoral Fellowships in Health Policy and Management

The Department of Health Policy and Management offers two-year postdoctoral fellowships to physicians and dentists who wish to do independent research in such areas as quality of medical care, technology assessment and cost-effectiveness, health care policy, management of health care organizations, and AIDS policy. The program emphasizes methodology in evaluation research, decision science, economics, and organizational analysis, and permits fellows to design individualized programs of study. Fellows may also apply for admission to a formal degree program.

Candidates must hold an MD, DDS, or equivalent degree, and must be US citizens or permanent residents. Applicants must submit a curriculum vitae, three letters of reference, and a statement describing career goals, research interests, and reasons for applying. The application deadline is November 2, 1997, for a fellowship beginning in July, 1998. For more information, contact Kristine L. Forsgard in the Department of Health Policy and Management.

For more information about the PhD program, including financial aid, please contact Joan P. Curhan, Director, PhD Program in Health Policy.

79 John F. Kennedy Street,
Cambridge, MA 02138.
Phone: 617-496-5412
Fax: 617-496-9053

an individual plan of study. While students in this program have the opportunity to take courses throughout the university, all required courses are offered through HSPH. Candidates normally complete two academic years of study in residence at HSPH, pass a written departmental general examination and an oral qualifying examination, and complete, defend, and submit a thesis for publication. The doctoral thesis, advised by a faculty committee of three or more members, is normally comprised of three publishable papers.

Applicants must hold an MD, JD, or other terminal professional degree. In addition, applicants should have a strong aptitude in a quantitative discipline (demonstrated by prior academic performance, work experience, and standardized test scores from the GRE, MCAT, or LSAT), experience in the health sector, and the ability to perform original and independent work. Applicants should indicate their anticipated area of concentration within the department and anticipated faculty mentor (if known) in their application essay.

Doctor of Philosophy in Health Policy

The PhD in Health Policy, awarded by the Faculty of Arts and Sciences, is designed for students seeking teaching careers in institutions of higher learning (schools of public health, public policy, and medicine) and/or research careers in health policy. It is a collaborative program of

four Harvard University faculties: the Graduate School of Arts and Sciences, the School of Public Health, the Medical School, and the John F. Kennedy School of Government. Because this is an interfaculty program, enrolled students take courses throughout the university.

Students focus on one of the following areas within health policy: decision science, economics, organizational behavior, political analysis, or statistics and evaluative science. In addition, students specialize in one of the following areas of policy interest: environmental health, health care services, mental health, or public health.

Applicants must take the GRE, MCAT, or GMAT. In addition, applicants whose native language is not English must take the TOEFL.

Application for admission to the PhD in Health Policy is made through the Graduate School of Arts and Sciences (GSAS). Application materials must be obtained from GSAS at 8 Garden Street, Cambridge, MA 02138 (phone: 617-495-5315).

Courses Offered by the Department of Health Policy and Management, 1997-98

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1998 summer sessions).

ID 240c. Principles of Injury Control (Hemenway, Graham)

Introduces the problem of intentional and unintentional injury, including motor vehicle crashes, fires, and violence. Examines control options, methods for evaluating prevention programs, and determination of the optimal combination of countermeasures. (2.5 credits)

ID 250. Ethical Basis of the Practice of Public Health

ID250a. (Roberts, Reich) ID250b. (Roberts)

Provides a broad overview of the main philosophical and moral ideas that are used to resolve debates of public health policy. Helps students develop the capacity to analyze, criticize, evaluate, and construct policy-oriented arguments. (2.5 credits)

ID 251s. Ethical Basis of the Practice of Public Health: Health Care Delivery (Brennan)

Emphasizes US health care policy and modern medical ethics to explore the political theory of medical care. Helps health professionals understand the manner in which political economy and ethics interact in health care policy decisions. (2.5 credits)

HPM 202s. The Role of the Physician Manager in Health Care (T. Lee, Mort)

Examines the major managerial roles for physicians in the arena of health care delivery. Topics include quality improvement and re-engineering in an acute care hospital, building an integrated delivery system, the changing role of payers, guideline development and implementation, and medical management under capitation. (2.5 credits)

HPM 204. Research Synthesis and Meta-Analysis Applications in Public Health and Clinical Medicine HPM 204d. (Colditz, Laird)

HPM 204s. (Laird, Stoto)
Focuses on research synthesis (meta-analysis) and on the use of data to inform clinical decision making and health care policy. (2.5 credits)

HPM 205ab. Economic Analysis for Public Health (Hemenway)

Introduces basic principles of economics and economic analysis, particularly as they apply to public health. Covers such aspects of microeconomic theory as determinants of supply and demand, the theory of markets, economic efficiency, and other topics in health care economics. (5 credits)

HPM 205s. Economic Analysis for Public Health I (Ettner, Richardson)

Presents the first part of introductory microeconomic theory and economic analysis of health and medical care markets. Topics include supply and demand, input and output markets, market imperfections, and the concept of economic efficiency (2.5 credits)

HPM 205t. Economic Analysis for Public Health II (Ettner, Richardson)

Presents the second part of introductory economic analysis for public health by focusing on the application of economic theory to public health issues. Topics include moral hazard and adverse selection in insurance markets, physician and hospital payments, managed care, environmental pollution, and injury prevention. (2.5 credits)

HPM 206ab. Economic Analysis (Hemenway)

Brings students to an intermediate-level understanding of microeconomic theory. Emphasizes the uses and limitations of the economic approach. (5 credits)

HPM 207ab. Econometrics for Health Policy (Yip)

Provides students with an understanding of econometric concepts and methods used in health policy research. Special attention is given to modeling and model specification issues. (5 credits)

HPM 208cd. Health Care Regulation and Planning (Swartz)

Examines issues for US health care reform: insurance, financing, cost-control methods, incentives for hospitals and physicians, quality of care, long-term care, competitive versus regulatory approaches, and the roles of government and the private sector. (5 credits)

HPM 210d. Medical Malpractice and Risk Management (Chirba-Martin, Brennan)

Focuses on the development, implementation, and evaluation of risk management programs and legislative reforms in patient compensation plans. Emphasizes the relationships among quality of care standards, quality assurance, malpractice vulnerability, and risk management programs. (2.5 credits)

HPM 211abcd. New Developments in Health Law (Brennan, Chirba-Martin, Studdert)

Explores recent developments in legal issues pertaining to public health, focusing on topical decisions, bills being debated in Congress, newly enacted statutes, issues related to medical ethics, and developments in corporate and antitrust law. (1.25 credits)

HPM 212ab. Program Evaluation in Health Policy (Needleman)

Examines issues in health program evaluation, with an emphasis on accuracy, relevance, and credibility of findings. Topics include establishing the scope of an evaluation, data sources and problems, inference, and presenting and applying findings. (5 credits)

HPM 213b. Law and Public Health I (Parmet, Studdert)

Explores the relationship between US constitutional protections of individual rights, and the need to use the police power of the state to address public health problems. Includes related issues of civil liberties and equal rights, and legal aspects of attempts to control or prevent communicable diseases such as HIV. (2.5 credits)

HPM 214c. Law and Public Health II: American Health Care (P. Green, Hyams, Studdert)

Focuses on the legal oversight of the US health care system. Contrasts regulation of provider activity with market-based approaches, and examines the effects of tort law on provider behavior and alternatives to traditional legal structures. (2.5 credits)

HPM 216ab. Law, Economics, and Ethics of Health Care I (Brennan)

Examines the legal issues that occur in the doctor-patient relationship. Issues include informed consent, conflicts of interest, reform of medical malpractice law, confidentiality, and right to die. (2.5 credits) Not offered 1997-98.

Faculty

Department Chair: Arnold M. Epstein, AM (Harvard University), MD (Duke University); Professor of Health Policy and Management. Access and quality of care, especially in disadvantaged populations.

Robert J. Blendon, MBA (University of Chicago), MPH, DSc (Johns Hopkins University); Professor of Health Policy and Management. Politics of health care; access to health care; approaches to health care reform; influence of public opinion in shaping health policy.

Troyen A. Brennan, MA (Oxford University), JD, MPH, MD (Yale University); Professor of Law and Public Health; Professor of Medicine, Harvard Medical School. Medical ethics; personal injury and environmental litigation; medical malpractice and health policy reform.

Peter I. Buerhaus, MS (University of Michigan), PhD (Wayne State University); Assistant Professor of Health Services Administration. Cost-effective use of the nation's supply of registered nurses.

Paul H. Campbell, MPA (Portland State University), SD (Harvard University); Lecturer on Management. Financial management, strategic planning, and reimbursement systems; health services in developing countries.

Harvey V. Fineberg, MD, MPP, PhD (Harvard University); Professor of Health Policy and Management and Provost of Harvard University. Technology assessment; cost effectiveness and decision analysis; AIDS policy, prevention, and education; vaccine evaluation and policy; health care reform.

John D. Graham, AM (Duke University), PhD (Carnegie-Mellon University); Professor of Policy and Decision Sciences, Director of the Center for Risk Analysis, and Director of the Harvard Injury Control Center. Environmental protection; prevention of intentional and accidental injury.

James K. Hammitt, SM, MPP, PhD (Harvard University); Associate Professor of Health Policy and Management. Mathematical modeling and analysis of economic behavior and decision making under uncertainty, with applications to valuation, regulation, and management of health and environmental quality.

David Hemenway, AM (University of Michigan); PhD (Harvard University); Professor of Health Policy. Intentional and unintentional injury, health care economics

William C. Hsiao, MPA, PhD (Harvard University); K. T. Li Professor of Economics, Member of the Faculty, Harvard Business School. Health care systems, control of health care costs; universal insurance coverage

Nancy M. Kane, MBA, DBA (Harvard University); Lecturer on Management. Financial health and competitive strategies of health care organizations; provider behavior under third-party payment systems.

Jack Kasten, MPH (University of Michigan); JD (Boston College); Lecturer on Health Services. Managed care, service utilization; manpower issues, hospital organization and management.

Karen M. Kuntz, SM, SD (Harvard University); Assistant Professor of Health Decision Science. Cost effectiveness analysis of cancer screening strategies and development of disease-specific multiattribute utility scales.

Leonard J. Marcus, BA, MSW (University of Wisconsin); PhD (Brandeis University); Lecturer on Public Health Practice. Negotiation, conflict resolution, and use of mediation in health care settings; effects of conflict on health care decision-making and outcomes.

Jack Needleman, MA (Syracuse University); PhD (Harvard University); Assistant Professor of Economics and Health Policy. Health economics and health policy; econometrics; research design and evaluation; applied policy analysis; management of the policy process; hospital finance.

Joseph P. Newhouse, PhD (Harvard University); John D. MacArthur Professor of Health Policy and Management in the Faculties of Medicine, Government, Public Health, and Arts and Sciences; Director of the Harvard University Division of Health Policy Research and Education; and Chair of the Committee on Higher Degrees in Health Policy. Financing and organization of medical care; medical malpractice; manpower policy; outcome research.

HPM 217cd. Law, Economics, and Ethics of Health Care II (Brennan)

Provides an overview of the law of health care institutions, emphasizing recent developments. Topics include new payment methods and insurance forms, antitrust litigation, rationing mechanisms, and the role of health plan purchasing cooperatives in the future of medical care. (5 credits)

HPM 219a. Financial Transactions and Analysis (Kane)

Introduces concepts of financial accounting for the non-accountant user of financial information. Focuses on basic accounting transactions, statement preparation, accrual accounting, accounting for capital, and financial analysis in a variety of health care organizations. (2.5 credits)

HPM 220b. Financial Management and Control (Siegrist)

Introduces cost accounting and management control concepts and their uses in health service organizations. Topics include cost accounting, management control structure and process, responsibility accounting, budgeting, reporting, and variance analysis. (2.5 credits)

HPM 221ab. Management in Public Health in Industrialized Countries (Roberts)

Explores the management of health delivery organizations in industrialized countries. Topics include organizational issues, financial management, cost accounting, management control systems, and institutional strategy. (5 credits)

HPM 221s. Management in Public Health in Industrialized Countries I (Roberts)

Presents the first part of an introduction to the management of health delivery organizations in industrialized countries. Topics include the nature and functions of managerial work, organizational strategy and marketing, and an introduction to management cost accounting and control.

HPM 221t. Management in Public Health in Industrialized Countries II (Roberts)

Presents the second half of an introduction to the management of health delivery organizations in industrialized countries. Topics include managing human resources, organizing production, and the application of ideas from total quality management to improving organizational effectiveness. (2.5 credits)

HPM 222d. Financial Management of Health Care Organizations (Puhy, Rivenson)

Continues the study of financial management begun in previous courses, focusing on a range of health care organizations. Topics include financial management of working capital, investment decision models, long-term capital structure, and mergers and acquisitions of health care organizations. (2.5 credits)

HPM 223b. Public Speaking for Managers (Rivenson)

Provides students with the opportunity to develop oral communication skills. Emphasizes techniques useful to managers. (1.25 credits)

HPM 224c. Analyzing National Health Policy: An International Comparative Perspective (Roberts, Donelan, Koeck)

Provides students with the skills needed to analyze proposed changes to an industrialized country's national health policies. Examines questions facing countries that relate to the control of technology, hospital investment, the supply and distribution of physicians, access to care, and the role of prevention in the financing of health care. (2.5 credits)

HPM 225d. Legal and Ethical Issues in the AIDS Epidemic (Lazzarini)

Examines the legal and ethical issues raised by the HIV/AIDS epidemic, including ways that social issues, such as discrimination, have influenced the epidemic, and the relative roles of voluntarism and coercion in public health strategies. Other topics include the shift in epidemiology as HIV/AIDS affects increasing numbers of women, children, and minorities and the design of prevention programs in an imperfect world. (1.25 credits)

HPC 226cd. Urban Violence in America (Prothrow-Stith, Earls)

Examines the causes and possible remedies for the increase of urban violence in the US from an interdisciplinary perspective. (2.5 credits)

HPM 227cd. The Economics of Health Policy (Newhouse)

Considers policy issues related to Medicare reimbursement, malpractice, the aggregate number and distribution of physicians, and the demand for medical care services and insurance. (5 credits)

HPM 228cd. Introduction to the New American Health Care System: Law, Policy, and Management (Moseley)

Examines management and legal issues surrounding the new organizational structures and relationships emerging in the health field as a result of increased competition, cost control mechanisms, and health care reform. (2.5 credits)

HPM 230cd. Managing People in Health Care Organizations (Moseley)

Explains the basic systems and strategies for managing human resources in health care delivery organizations, including principles of recruitment, management, and supervision. Stresses the role of labor unions, management of staff relations, and downsizing. (5 credits)

HPM 231c. Competitive Strategy Determination (Moriarty)

Focuses on the conceptual framework needed to plan for the long-term viability of health care organizations. Students learn to appreciate the concepts of competitive strategy and competitive advantage and gain the tools and skills to formulate and evaluate organizational strategy. (2.5 credits)

HPM 232c. Operations Management in Service Delivery Organizations (Pliskin)

Examines the role of operations in an organization. Topics include process and capacity analyses, types of processes, productivity, quality standards, and operating strategy. (2.5 credits)

HPM 233d. Strategic Marketing Management in Health Systems (Wasek)

Examines marketing within a strategic framework across the public and private sectors, domestic and international health systems, and social marketing contexts. Marketing management, research, and strategy techniques are discussed and applied to program design, business planning, and implementation issues. (2.5 credits)

HPM 234a. Managing in Health Organizations (Cannon)

Reviews the essential tasks, functions, and skills of general managers, including negotiation, personnel selection, developing consensus for organizational priorities, making good use of consultants and middle management, diagnosing problems, and allocating resources. (2.5 credits) Not offered 1997-98.

HPM 235c. Policy Issues in Managed Care: Policy and Public Management Issues (Turnbull)

Examines the concepts, programs, and policy of managed care in the context of current health care reform proposals at state and national levels. Focuses on forms that managed care products take and their intended achievements, how these forms are viewed by the market, and how they will affect costs, health outcomes, and buyer satisfaction. The prospect of using managed care to control national health spending and to improve access and quality of care is also discussed. (2.5 credits)

HPM 236cd. Managed Health Care (Cannon)

Focuses on recruiting and compensating primary care physicians; negotiating and contracting with specialty physicians and hospitals; managing hospital utilization; marketing and member service; rating, underwriting, and premium construction; and dealing with special markets, such as Medicaid. (5 credits) Not offered 1997-98.

HPM 238c. Strategic Use of Information Systems in Health Care Delivery (Nobel)

Explores information systems from the perspectives of providers, payers, and consumers. Topics include computerized patient records, repository databases, clinical decision support systems, and interactive multimedia communications. (1.25 credits)

HPM 239bcd. Applied Financial Analysis of Health Care Organizations (Kane)

Builds skills by assigning students a set of health-care organization financial statements to analyze as a group before breaking into smaller groups to pursue student-defined financial-research questions. (3.75 credits)

HPM 241ab. Health Care in the US: System, Policy, and Comparative Perspectives (Akula)

Examines the organization of the US health care system, the current policy debate about health care reform, and ways in which health care systems of other industrialized nations provide insight into the US experience. (5 credits)

HPC 242c. Politics and Strategies for Change in Health Policy (Blendon)

Focuses on development of strategies to influence public policy in order to improve the health of populations. Topics include the politics of health care, political strategy, lobbying and interest groups, the media and public opinion, campaigns, the effects of campaigns and elections on health care policy, coalition-building, and grass roots advocacy. (2.5 credits)

HPM 243c. Health Economics: Economic Analysis of the Health Care System (Hsiao)

Introduces health economics, the use of economic analysis to examine major health care financing and delivery issues, and the development of policies and programs designed to address them. Topics include financing, access, utilization, cost control, market structure, and national health plans. (2.5 credits)

HPM 244d. Pharmaceutical and Biotechnology Industries: Public Policy and Regulatory Issues (Norris)

Analyzes public policy and legal issues in the pharmaceutical and biotechnology industries, stressing research and development of new biomedical products. Examines regulatory programs for new product development, the ethics of clinical investigation, and conflicts of interest. (1.25 credits)

HPM 245d. Public Health Leadership Skills (Prothrow-Stith, Kurland, Marcus)

Provides students with concrete skills needed to fill leadership positions in health. Topics include public speaking, articulation of goals, negotiation, budget development, and constituency building. (2.5 credits)

HPM 246abcd. Seminar in Health Policy (Newhouse, Cutler, Frank)

Covers the financing and organization of health care, medical manpower, medical malpractice, technology assessment, prevention, mental health, long-term care, and quality of care. (10 credits)

HPM 247cd. Political Analysis and Strategy for US Health Policy (Blendon)

Analyzes the politics of major health policy development in the US and provides skills for developing strategies to influence policy outcomes. Topics include the influence of the press, pollsters, and political institutions on health policy, and the health politics environment in different countries. (5 credits)

R. Heather Palmer, MB, BCh (Cambridge University), SM (Harvard University); Lecturer on Health Services and Director of the Center for Quality of Care Research and Education. Quality of health care; incorporation of evaluation measures into health care reform plans.

Deborah B. Prothrow-Stith, MD (Harvard University); Professor of Public Health Practice and Associate Dean for Faculty Development. Community-based violence prevention; violence prevention protocols for primary care settings.

Lorenz R. Rhomberg, PhD (State University of New York at Stony Brook); Assistant Professor of Risk Assessment (Health Policy and Management and Environmental Health). Critical analysis of the methods and procedures of human risk assessment, especially quantitative methods for putative carcinogens.

Marc J. Roberts, PhD (Harvard University); Professor of Political Economy. Health policy; environmental policy; ethical aspects of allocating scarce public health resources.

Katherine Swartz, MS, PhD (University of Wisconsin); Associate Professor of Health Policy and Management. Analyzing populations without health insurance; developing policies to finance universal health insurance; structures of financial incentives for physicians.

Alvin R. Tarlov, MD (University of Chicago); Professor of Health Promotion. Health outcomes assessment in individuals and population groups.

Milton C. Weinstein, AM, MPP, PhD (Harvard University); Henry J. Kaiser Professor of Health Policy and Management (Health Policy and Management and Biostatistics); Professor of Medicine, Harvard Medical School. Cost-effectiveness of health practices and technologies.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School.

Deborah J. Cotton, MD (Boston University), MPH (Johns Hopkins University); Associate Professor in the Department of Health Policy and Management. Clinical epidemiology of HIV infection; HIV/AIDS in women; health science policy related to HIV/AIDS clinical research.

John R. Delfs, MD (Harvard University), Assistant Professor in the Department of Health Policy and Management. Aging and long-term care policy, impact of structure and organization on health services delivery

Robert A. Dorwart, SM (Harvard University), MD, MPH (Tulane University), Professor in the Department of Health Policy and Management. Organization and financing of care; practice patterns, quality of care, and administration

Robert A. Greenes, MD, PhD (Harvard University); Professor in the Department of Health Policy and Management. Medical informatics; design and development of a modular approach to knowledge management; facilitating integration of the work of multiple contributors.

John Hedley-Whyte, MB, BChir, MA, MD (Cambridge University); Professor in the Department of Health Policy and Management. Standards for medical equipment and services.

Matthew H. Liang, MD, MPH (Harvard University); Professor in the Department of Health Policy and Management. Epidemiology of rheumatic disease and disability; clinimetrics; health services research; technology assessment.

Richard F. Mollica, MD (University of New Mexico), MAR (Yale University); Associate Professor in the Department of Health Policy and Management. Survey instruments for traumatized populations; cross-cultural psychiatry and psychiatric epidemiology; international health policy.

Adjunct Faculty

Donald M. Berwick, MPP, MD; President and CEO, Institute for Healthcare Improvement.

S. Philip Capen, MS, MD; Chairman, CEO, and President, The Codman Research Group, Inc.

Mark G. Field, AM, PhD; Professor of Sociology, Emeritus, Boston University.

Kenneth A. Freedberg, MD, SM; Associate Professor of Biostatistics and Epidemiology, Boston University School of Public Health.

Pamela S. Green, JD, private consultant on health law and policy.

Sheldon Greenfield, MD; Professor of Medicine, Tufts University.

HPM 248cd. Issues, Special Interests, and Health Care Reform (Blendon, Newhouse)

Examines key issues in the health care system as they affect doctors, hospitals, insurers, governments, and the public. Analyzes the roles of labor and management, their interactions on benefit policies and collective agreements, and their impact on issues of public policy concern. (2.5 credits) Not offered 1997-98.

HPM 249cd. Development of Federal Health Policy (Nuzzo)

Discusses the interplay of forces, both internal and external to government, which influence federal health policy decisions. Describes the actors and the policy development process. Develops skills in policy analysis, writing of memoranda, and government relations. (2.5 credits)

HPM 253t. Quality Improvement in Health Care (Bisognano, Berwick)

Explores theoretical and practical methods for improving health care systems by presenting clinical cases, organizational lessons, interactive learning modules, and site visits to health care settings. (2.5 credits)

HPM 255d. Payment Systems in Health Care (Griswald, Soeffing, Kane)

Examines issues related to third-party reimbursement for health care institutions and individual providers. Issues include cost containment efforts, provider and policy perspectives, and managed care. (2.5 credits)

HPM 256c. Clinical Quality Measurement for Quality Improvement (Palmer, Lawthers, Peterson)

Introduces the terminology, concepts, methods, and strategies for clinical quality measurement in a variety of health care environments. Takes a rigorous analytic approach using epidemiologic methods. (2.5 credits)

HPM 257c. Use of Outcomes and Patient Satisfaction in Assessing Quality of Care (Greenfield, Kaplan)

Explores the principles and issues involved in using outcomes of care and patient satisfaction in evaluating quality of care, including an assessment of the major instruments and methods currently available. Topics include the relationship of process to outcome, the impact of setting on how outcomes are used, difference between the reporting, rating, and participating functions of the patient, and the role of provider satisfaction in outcome. (2.5 credits)

HPM 258d. Physician Performance (Leape)

Examines factors influencing physician practice, including training, experience, organizational setting, financial incentives, and patient preferences. Considers strategies for changing physician behavior, such as education, feedback, guideline development, and utilization management. (2.5 credits)

HPM 259. Quality Management in Health Care

HPM 259d. (Blumenthal, Bohmer)

HPM 259t. (Lee, Bohmer)

Introduces the concepts and tools of total quality management, and their applications to health care. Reviews the data needs of quality management, the implications for information system planning, and the relationship between national health care policy as it relates to quality. (2.5 credits)

HPM 262c. How to Write, Review, and Publish Articles on Medicine and Health Policy (Lundberg, Donelan)

Teaches students to prepare, peer review, and revise articles for publication, while providing an overview of current health policy controversies. (2.5 credits)

HPM 263c. Patient-Based Assessment of Health Outcomes (Tarlov, Keller, J.E. Ware, Landgraf, Wagner)

Examines patient-based assessment (PBA) of health status, including how it is measured, its reliability and validity, and its usefulness. PBAs will be considered in the context of clinical investigations, child health assessments, and clinical practice. (1.25 credits)

HPM 264d. Measuring the Outcomes of Health Care: A Research Course (Tarlov, Keller, J.E. Ware, Bayliss, Kosinski)

Covers the use of health-outcomes assessment measuring techniques in research. Students are given data from clinical investigations to use in completing a research project, from choosing the topic through assembling the data, analysis, interpretation, and discussion of the results. (1.25 credits)

HPM 266d. Seminar on Refugee Trauma (Mollica, Lavelle, Allden)

Focuses on the public health problems of highly traumatized refugee populations. Provides a comprehensive overview of the international approach, theoretical models, and public health strategies for dealing with refugee crises. (1.25 credits)

HPM 267d. Health and Medical Care in an Aging Population

Introduces the public health and public policy implications of an aging population. Topics include the demography, epidemiology, and politics of aging; delivery and financing of health care for older populations; ethical issues in health policy; and quality of care measurement of innovative treatments and delivery systems. (2.5 credits)

HPP 268c. Financing Health Care in Developing Countries (Hsiao, Berman)

Provides an introduction to public and private financing of health care in developing countries. Analyzes economic considerations in alternative approaches to financing, reviews formal perspectives of economic theory, and assesses links between stages of national development and health care financing. (2.5 credits)

HPM 269b. Comparative Health Systems of Industrialized Societies (Field)

Undertakes a comparative examination of the health systems of industrial and urban societies in order to provide an understanding of shared features and critical differences. (2.5 credits) Offered 1997-98 and alternate years.

HPM 270a. Mental Health Policy in the US (Dorwart, Hermann)

Examines the historical development and current status of policy issues relevant to mental health services in the US. Topics include deinstitutionalization of mental hospitals, privatization of psychiatric services, the role of federally funded community mental health centers, and the organization and financing of state mental health agencies. (2.5 credits)

HPM 271e. Overview of Domestic Violence (Prothrow-Stith, Isaac)

Covers the epidemiology of domestic violence, dynamics of abusive relationships, responses of the criminal justice and health care sectors, the role of the shelter and advocacy communities, relationships with other forms of violence, and strategies for primary prevention. (1.25 credits)

HPM 273a. Policy and Management Challenges in Public Health Practice (Prothrow-Stith, Kennedy)

Examines the theories and practice of leadership in public health. Focuses on the management, health policy, and interpersonal difficulties that can arise in leadership positions, and strategies for responding. (1.25 credits)

HPM 274abcd. Oral Health Policy Research Seminar (Douglass)

Concentrates in the fall term on the research methods of current national studies of the need, supply, demand, and cost of dental care. The spring term emphasizes research work on relevant dental care policy subjects. (5 credits)

HPM 275ab. Dental Public Health and the Dental Care Delivery System (Douglass)

Reviews basic concepts in dental public health and dental care delivery systems in the US and elsewhere. Examines issues of utilization of services, need versus demand for dental care, methods of quality assurance, and the role of government agencies in the provision and regulation of care. (2.5 credits)

HPM 276s. Methods and Applications in Health Services Research (Epstein)

Covers the methodology and application of health services research. Topics include research design, analyses of large databases, cost effectiveness analyses, survey methodology, assessment of health status, assessment of quality, measurement of access to care, risk adjustment, and statistical techniques of health services research. (2.5 credits)

HPM 277s. Current Issues in Health Policy (Epstein, Komaroff)

Provides an overview of the major health policy issues facing the US today. Focuses on roles of hospitals, doctors, private and government insurance, and different systems for organizing and financing care. (2.5 credits)

HPM 278d, 278f. Skills and Methods of Health Care Negotiation and Conflict Resolution (Marcus)

Presents the theory and practice of negotiation and conflict resolution with emphasis on integrating analytic skills, negotiation techniques, and conflict resolution methods into the practice of public health. (1.25 credits)

HPB 280b. Decision Analysis for Health and Medical Practices (Hammitt)

Discusses the methods and applications of decision analysis, cost-effectiveness analysis, and benefit-cost analysis in health care technology assessment, medical decision making, and health resource allocation. (2.5 credits)

HPB 281c. Methods for Decision Analysis in Health Care Technology Assessment (Kuntz, Weinstein)

Covers methods and applications of decision analysis and other modeling techniques to clinical problems. Topics include Markov models, life expectancy modeling, deterministic and probabilistic sensitivity analysis, simulation models, ROC analysis and diagnostic technology assessment, quality of life valuation, multiattribute utility, and behavioral decision theory. (2.5 credits)

HPB 282d. Cost-Effectiveness and Cost-Benefit Analysis for Health Program Evaluation (Graham, Weinstein)

Covers methods and applications of cost-effectiveness and cost-benefit analysis for health program evaluation, medical technology assessment, and environmental risk analysis. (2.5 credits)

HPM 283b. Risk and Decision-Making: A Social Science Perspective (Graham, Roberts)

Explores the questions of how risks are perceived, evaluated, and managed by different groups in society. The perspectives on risk and decision making from the fields of psychology, sociology, anthropology, political science, philosophy of science, and ethics are contrasted with those arising from the literature on economics, decision theory, and management science. (2.5 credits)

HPE 284ab. Decision Theory (Hammitt)

Introduces the standard model of decision making under uncertainty and methodological issues created by applications to health research. Topics include von Neumann-Morgenstern and multiattribute utility theory, Bayesian statistical decision theory, stochastic dominance, the value of information, judgment under uncertainty, and elicitation and calibration of expert opinion. (5 credits)

Dean M. Hashimoto, MS, MD, JD, MOH; Staff Physician, Occupational Medicine Clinic, Massachusetts General Hospital.

Maria G. M. Hunink, MD, PhD; Associate Professor, University of Groningen, The Netherlands.

Andrew L. Hyams, JD, MPH; Senior Policy Associate, Urban Health Institute, Boston Department of Health and Hospitals.

Magnus G. Johannesson, PhD; Associate Professor, Stockholm School of Economics.

Sherrie H. Kaplan, MPH, MSPH, MS, PhD; Adjunct Associate Professor of Medicine, Tufts University School of Medicine.

Christian M. Koeck, MD, MPH, SM, SD; Executive Vice President, Vienna City Hospital Association, and Chair, Department of Organizational Development.

Zita Lazzarini, MPH, JD; private consultant.

Lucian L. Leape, MD; Adjunct Professor of Health Policy in the Faculty of Public Health.

George D. Lundberg II, MD, MS, ScD; Editor, *Journal of the American Medical Association*.

Daniel D. Moriarty, MBA; Vice President, Information Systems Group, John Snow, Inc.

George B. Moseley III, MBA, JD; Instructor, University Seminar Center.

Benjamin W. Moulton, MPH, JD; Executive Director, American Society of Law, Medicine and Ethics.

Jeremy J. Nobel, MD, MPH, SM; Medical Director, G.T.E. Laboratories.

John A. Norris, JD, MBA; President and CEO of John A. Norris, Esquire, PC, a law and public affairs/relations consulting firm.

James L.J. Nuzzo, Managing Partner, The Colchester Group.

Wendy E. Parmet, JD; Professor of Law, Northeastern University.

Joseph S. Pliskin, SM, PhD; Sidney Liswood Professor of Health Care Management, Ben-Gurion University.

Dorothy E. Puhy, MBA; Chief Financial Officer and Assistant Treasurer, Dana-Farber Cancer Institute.

Howard Rivenson, MBA, Chief Financial Officer, East Boston Neighborhood Health Center

Richard B. Siegrist, Jr., MS, MBA, Vice President and Chief Financial Officer of Transition Systems, Inc

Glenn K. Wasek, SM, Vice President and Director, Marketing Group, John Snow, Inc

HPE 285d. Seminar on Risk Management and Communication (Graham)

Challenges students to evaluate the risk analysis framework as an approach to managing health, safety, and environmental hazards. Addresses contemporary issues in risk assessment, evaluation, management, and communications. (2.5 credits)

HPM 286s. Decision Analysis in Clinical Research (Weinstein)

Introduces decision analysis methods relevant to clinical decision making and clinical research; probability theory; utility theory; diagnostic test use and evaluation; and uses of decision analysis in clinical decision making and research design. (2.5 credits)

HPM 287abcd. Research Seminar on Risk and Decision Analysis (Hammitt)

Introduces students to state-of-the-art scholarship in risk analysis and decision theory. Topics include theory and techniques of risk analysis; choice under uncertainty; health policy models; cost-effectiveness analysis; and statistical decision theory. (2.5 credits)

HPM 288c. Management Science (Pliskin)

Introduces quantitative tools and methods to promote optimal use and allocation of scarce resources. Topics include linear programming, transportation, assignment, network flows, dynamic programming, queuing, and simulation. (2.5 credits)

HPM 289cd. Practicum in Decision Analysis and Cost-Effectiveness (Hammitt, Kuntz)

Enables students to design and undertake a research project in decision analysis or cost-effectiveness analysis on a topic of their choice. (2.5 credits)

HPM 290abcd. Applied Research and Practice in Health Policy and Management (Hemenway)

Teaches students to apply analytic and managerial methods to concrete problems. Each student carries out a research project, conducts a policy analysis, or performs a management study on behalf of an individual or institutional sponsor. (10 credits)

HPM 291cd. Applied Research in the Law of Health Policy and Management (Brennan)

Allows students in the Law and Public Health concentration of the MPH degree program to apply analytic skills to a practical problem. Students carry out a research project, perform a policy analysis, or conduct a managerial study on behalf of an individual or institutional sponsor. (5 credits)

HPM 292d. Research Ethics (Brennan)

Reviews ethical issues that arise in the conduct of research. Topics include informed consent, disclosure of conflicts of interest, multiple authorship, issues in mentoring (including gender and race-based discrimination), and federal oversight. Required for all students engaged in studies supported by the National Institutes of Health. (1.25 credits)

HPM 293d. Surveys for Health Policy (Donelan, Blendon)

Gives students experience in designing, conducting, analyzing, and reporting results of surveys relevant to health policy issues. Topics include defining issues, contracting with survey organizations, collecting objective and subjective data, sampling specialized populations, and presenting data. (2.5 credits)

HPM 294b. Methodology Issues in Health Services Research (Kaplan)

Emphasizes the array of methods available to health services researchers, their disciplinary origins, underlying assumptions, and strengths and weaknesses. (2.5 credits)

HPM 296cd. Doctoral Seminar in Health Economics (Newhouse, Cutler, Ellis)

Explores frontier work in the field of health economics. Focuses on advanced theories and economic models useful for policy analysis, and on helping students develop research topics. (2.5 credits)

HPM 297cd. Public Opinion, Polling, and Public Policy (Blendon)

Explores the uses of public opinion polling in public policy decision-making and media reporting. Students analyze and evaluate existing opinion surveys, design polling questions, and interpret public opinion results. (5 credits)

Independent Study, Field Experience

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research, undertake specialized readings, perform field projects, or carry out independent studies.

Department of Maternal and Child Health

F

aculty in the Department of Maternal and Child Health undertake research in six major areas: *infant mortality and morbidity*, including the evaluation of risk factors for mortality, methods for confidential perinatal inquiry, outcomes of high-risk infants, and the efficacy of early intervention; *normative growth and development*, including the analysis of patterns of growth, maturation, and behavioral, social, and nutritional changes in populations; *children with special needs*, including the assessment of health care for children with chronic illness or disability and the development of criteria for assessing proposals to reform the financing of health care; *high-risk youth*, including analysis of policies and strategies for preventing high-risk adolescent behaviors, examination of services for children and youth with HIV, and longitudinal studies of the risk factors for delinquency, violent behavior, substance abuse, and mental illness; *nutrition*, including epidemiologic studies of child undernutrition in the United States and developing countries, exploration of computerized screening for women and children at nutritional risk, and inquiries concerning HIV and breast-feeding; and *women's and children's health services*, including studies of the planning, policy development, and performance of federal, state, and local public health agencies.

The department's academic curriculum includes courses on maternal and child health problems of public health significance; the physical, social, and cognitive stages of human development;

The goal of the Department of Maternal and Child Health is to improve the health of women and children through basic and applied research, through the preparation of professionals for leadership positions, and through advocacy and community service.

women and health; maternal and child health services; the roles of governmental, private, and voluntary health agencies; research methods; and the methodology of program planning, policy formation, and program evaluation in maternal and child health. All concentrators in the department are expected to acquire an understanding of normative growth and development, definition and research in maternal and child health problems, maternal and child health services, legislation supporting health and social services for mothers and children, and the planning of such services. All students fulfill the school-wide requirements for basic courses in biostatistics and epidemiology. Limited tuition support may be available for some students in the department.

Felton Earls, professor of human behavior and development, directs the Project on Human Development in Chicago Neighborhoods, a series of long-term studies of people from birth to adulthood aimed at advancing our understanding of the causes and consequences of violent behavior.

For more information about research and training in Maternal and Child Health, please contact Patricia Lavoie, Department of Maternal and Child Health, 677 Huntington Avenue, Boston, MA 02115. Phone: 617-432-1080 Fax: 617-432-3755

For more information about the four-semester, two-degree program in Maternal and Child Health and Parent-Child Nursing, please contact Jane Gardner, SD, Department of Maternal and Child Health, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1080
Fax: 617-432-3755

For more information about the Simmons College component of the program, please call 617-521-2141.

Faculty

Department Chair: Marie C. McCormick, MD, ScD (Johns Hopkins University); Sumner and Esther Feldberg Professor of Maternal and Child Health and Director of the Harvard Center for Children's Health; Professor of Pediatrics, Harvard Medical School. Infant mortality; outcomes of high-risk neonates and interventions to ameliorate adverse outcomes.

Stephen L. Buka, SM, SM, SD (Harvard University); Assistant Professor of Maternal and Child Health and Epidemiology. Causes and prevention of behavioral and developmental disorders of children.

Felton J. Earls, MD (Howard University); Professor of Human Behavior and Development; Professor of Child Psychiatry, Harvard Medical School. Longitudinal research to understand how community, family, and individual factors influence delinquent and criminal behavior.

Jane Gardner, SM (Boston College), SM, SD (Harvard University); Lecturer on Maternal and Child Health. Quality of health care for women and children; health outcomes research in publicly funded programs.

As described below, the department offers both a four-semester and a two-semester Master of Science (SM) program, a dual master's degree program for nurses, and a doctoral program leading to the Doctor of Science (SD) or Doctor of Public Health (DPH) degree. Please refer to page 8 for information about the Master of Public Health concentration in Family and Community Health.

Master of Science in Maternal and Child Health (four-semester program)

The four-semester SM program is designed to prepare students for mid-level positions as project analysts, service coordinators, and managers in the field of maternal and child health. Recent graduates have taken such positions as deputy director of the National Coalition of Hispanic Human Services Organizations and Training Coordinator for the HIV Prevention Training Center.

Applicants to this program should have either a master's degree in a field not directly related to health (such as law, education, sociology, or statistics) or a bachelor's degree in a health-related field and at least two years of relevant work experience.

Of the 80 credits necessary to earn the four-semester SM, at least 30 must be earned in departmental courses or approved courses in other departments. Students in this program must also fulfill core requirements in biostatistics, epidemiology, environmental determinants of health, social and behavioral sciences, and health policy, planning, and administration. A minimum of 5 credits must be earned in field work either during the summer between the two years or in the second academic year.

As a clinical nurse, Lisa Deal enjoyed helping people recover from illness. At the same time, she became increasingly interested in the possibilities of prevention. After taking a job as a community health nurse, she was convinced that public health was the field for her. Circumstances later took her overseas, where she developed skills in research and teaching by working as a research assistant at the University of Indonesia's Center for Child Survival and teaching health education classes in Jakarta.

"I'm excited to be analyzing data for a component of a major, federally funded effort to reduce infant mortality, the Healthy Start Project," said Lisa. "And a nice benefit is that I'm able to use the data for my doctoral thesis at HSPH, 'Early Postpartum Hospital Discharge Practices: Implications for Low Income Women in the US.'"

Master of Science in Maternal and Child Health (two-semester program)

The two-semester SM program is designed to prepare health professionals for research careers in public and private agencies. Recent graduates have taken such positions as director of adolescent medicine at New England Medical Center, assistant director of public health at Georgetown University, and assistant medical director of the Rhode Island Health Department; others have gone on to earn doctoral degrees.

Applicants eligible for the two-semester SM program are established practitioners or investigators holding prior master's or doctoral degrees in a related field such as medicine, dentistry, nursing, social work, nutrition, physical therapy, psychology, health education, or anthropology.

Of the 40 credits necessary to earn this degree, 20 must be earned in the Department of Maternal and Child Health or in approved courses from other departments.

Four-Semester, Two-Degree Master of Science in Maternal and Child Health (HSPH) and Parent-Child Nursing (Simmons College)

This four-semester, two-degree program is designed to prepare pediatric, school health, and obstetric/gynecologic nurse practitioners for leadership roles in public and private agencies. Recent graduates have taken such positions as

director of clinical services for the Family Planning Association of Maine and staff director for the World Health Organization's Maternal Health and Safe Motherhood Program.

Applicants should hold a bachelor's degree from a program accredited by the National League for Nursing, a license to practice nursing, and the equivalent of at least three years of full-time nursing experience. International nurses with equivalent backgrounds are eligible to apply. Applicants must meet the general admission requirements of both HSPH and Simmons College.

Students enroll in half-time study at both Simmons College and HSPH for two academic years, in addition to studying at Simmons for one summer session. The curriculum of the HSPH portion of the program is the same as that for the two-semester SM program.

Doctor of Science in Maternal and Child Health/Doctor of Public Health

The doctoral programs are designed to prepare public health professionals for research careers in academic institutions, public and private health agencies, and leadership roles in national and international organizations. Recent graduates have taken such positions as scientist/study director at the National Academy of Sciences and faculty positions in universities.

Applicants must have an advanced degree in a health field related to maternal and child health. They are expected to have a sound academic record with documented proficiency in the quantitative sciences, relevant work experience, and research interest in an area consonant with the goals of the department.

Doctoral candidates must spend two years in residence completing course work leading to a major (20 credits) in maternal and child health and minors (10 credits each) in two other fields. Students must pass the departmental written examination and the school-wide oral qualifying examination and must complete, defend, and submit a thesis based on independent research.

Women and Health

Several departments offer courses designed to increase understanding of the health of girls and women throughout the life cycle, with gender and biology understood as determinants of health, disease, and well-being. A Working Group on Women and Health has compiled a list of HSPH and non-HSPH courses that are relevant to women's health issues.

Courses Offered by the Department of Maternal and Child Health, 1997-98

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1998 summer sessions).

MCN 200a. Physical Growth and Development I (Peterson)

Introduces the principles of growth assessment that are an integral part of comprehensive child health programs. Topics include the selection, measurement, and interpretation of anthropometric indicators of growth. (2.5 credits)

MCH 201abcd. Public Health Practice in Maternal and Child Health (Gardner)

Provides students with opportunities to apply quantitative skills in a field situation. Students conduct needs assessments, present data for policy decisions, and gain experience in the organization and management of public health programs. (5 credits)

MCH 202c. Physical Growth and Development II: Seminar on Factors Affecting Growth and Development (Dwyer)

Explores the basic factors that influence physical growth and development from conception to maturity, and their implications at the individual, family, community and national levels. (1.25 credits)

MCH 203cd. Secondary Data Sets (Warner)

Introduces databases commonly used by MCH researchers, including vital statistics data and census data. Teaches students to understand the impact of database policy on research objectives. (2.5 credits)

MCH 204ab. Maternal and Child Health Programs and Policies (Gardner)

Discusses health care programs for mothers and children in the context of growth and maturational processes, legislative background, and social, mental health, and educational policies. (5 credits)

For more information about courses related to women's health throughout HSPH, contact Marlene Goldman, SD, Department of Epidemiology, 677 Huntington Avenue, Boston, MA 02115. Phone: 617-432-4586 Fax: 617-566-7805 E-mail: goldman@epiun1.harvard.edu

Karen E. Peterson, RD (Peter B. Brigham Hospital), SD (Harvard University); Assistant Professor of Nutrition (Maternal and Child Health and Nutrition). Epidemiology of malnutrition in industrialized and developing countries.

Geoffrey L. Warner, MBA (New York Institute of Technology), PhD (City University of New York); Assistant Professor of Maternal and Child Health. Econometric methods to measure health outcomes.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School.

Allen C. Crocker, MD (Harvard University); Associate Professor in the Department of Maternal and Child Health. Chronic illness and developmental disabilities in children; mechanisms of disability.

Charles J. Homer, MD (University of Pennsylvania), MPH (University of North Carolina); Assistant Professor in the Department of Maternal and Child Health. Application of epidemiologic methods to the assessment of the effectiveness of health care services.

Daniel J. Kindlon, MS, PhD (Cornell University); Assistant Professor in the Department of Maternal and Child Health. Causes of behavior disorders and learning disabilities.

Ellice S. Lieberman, MD (University of Florida), MPH, DPH (Harvard University); Associate Professor in the Department of Maternal and Child Health. Perinatal epidemiology; risk factors for adverse pregnancy outcomes; assessment of new technologies and care practices in obstetrics.

Eli H. Newberger, MD (Yale University), SM (Harvard University); Lecturer in the Department of Maternal and Child Health. Child abuse and family violence.

Judith S. Palfrey, MD (Columbia University), Professor in the Department of Maternal and Child Health. Development of preschool children, interface of health and educational services for children

Douglas K. Richardson, MD (Johns Hopkins University), MBA (University of Pennsylvania), Associate Professor in the Department of Maternal and Child Health. Impact of variations in practice styles on outcomes, resource use, and costs of neonatal intensive care

Benjamin P. Sachs, MD, BS, MRCS, LRCP (St. Mary's Medical School, London University), DPH (University of Toronto); Associate Professor in the Department of Maternal and Child Health. Epidemiology and health policy issues relating to women and children in technological evaluation, infant mortality, and medical services

Edward C. Tronick, MS (Cornell University), PhD (University of Wisconsin); Associate Professor in the Department of Maternal and Child Health. Neurodevelopment of infants and children exposed to drugs in utero; depressive symptoms and mother-infant interaction.

Adjunct Faculty

Johanna T. Dwyer, SM, SM, SD; Professor of Medicine and Community Health and Director, Stern Nutrition Center, Tufts Medical Center.

Marie P. Farrell, MS, MSN, EdD, MPH; Faculty Member, Fielding Institute

David T. Helm, MA, PhD; Adjunct Associate Professor, Sociology Department, Boston University; Research Associate, Children's Hospital.

William E. Kieman, MEd, MBA, PhD; Research Associate, Children's Hospital.

Lawrence C. Kleinman, MD, MPH; Assistant Clinical Professor of Pediatrics, University of California School of Medicine

John W. Kulig, MD, MPH, Associate Professor, Tufts University School of Medicine.

Albert J. Reiss, Jr., MA, PhD, William Graham Sumner Professor of Sociology, Emeritus, Yale University.

Deborah K. Walker, EdM, EdD; Assistant Commissioner, Bureau of Family and Community Health, Massachusetts Department of Public Health.

MCH 206a. Maternal and Child Health in Developing Countries (Farrell, Valadian)

Evaluates the core elements of MCH status and services in developing countries and analyzes factors shaping MCH programs in rapidly changing social environments. (2.5 credits)

MCN 207ab. Nutrition in Child Growth and Development (Dwyer)

Examines principles and practical problems encountered in developing policies and programs involving nutritional issues, growth, and development. Discusses general principles of nutrition as background for policy issues. (2.5 credits)

MCH 208b. Adolescent Health (Kulig, Kennedy)

Examines adolescent health, health behavior, and intervention programs in relation to physical, psychosocial, and cognitive development. (2.5 credits)

MCH 209c. Services for Children with Disabilities (Crocker, Helm)

Looks at how service programs in the disability field are put together, supported, and evaluated. Uses outside guests from community programs for many sessions. (2.5 credits)

MCS 210ab. Personality and Cognitive Development: Application to Public Health (Kindlon, Earls)

Examines the principles of child growth and development in the cognitive and psychosocial domains. Emphasizes the theories and research of Piaget, Bronfenbrenner, and Erikson. (2.5 credits)

MCH 211c. Women, Health, and Development (Gardner, Swenson)

Addresses the major issues concerning women and their relationship to health worldwide, including ways women affect the health of families, communities, and societies. (2.5 credits)

MCH 212ab. Developmental Disabilities I: Evaluation, Assessment, Families, and Systems (Helm, Crocker)

Focuses on issues facing professionals who work with people with developmental disabilities, including the professionals' role in diagnosing, evaluating, and assessing children who have developmental disabilities. (2.5 credits)

MCH 213d. Childbirth: Health Policy and Epidemiology (Sachs, Richardson, Lieberman)

Uses epidemiologic data to address perinatal health policy. Explores issues affecting childbirth services, including prenatal care, maternal health, and pregnancy complications. (1.25 credits)

MCH 214cd. Developmental Disabilities II: Values, Policy, and Change (Helm, Crocker)

Focuses on the community, system, and leadership components of developmental disabilities, with the goal of enhancing the quality of life of individuals with disabilities. (2.5 credits)

MCM 215cd. Planning and Evaluating Public Health Programs (Gardner)

Presents concepts and approaches to developing programs and services for any health, human service, or social program. (2.5 credits)

MCN 217c. Nutritional Surveillance (Peterson)

Covers theoretical and practical issues guiding the design and implementation of nutritional surveillance systems. (2.5 credits) Not offered 1997-98.

MCH 219d. Research Methods in Maternal and Child Health (McCormick)

Topics include use of vital statistics, confidential perinatal inquiry, admission severity scores, child health status measures. (2.5 credits)

MCH 220b. Society and Its Effects on Child Health (Samuels, Palfrey)

Examines the ways that society affects children's health in the US. Covers the effects of poverty on health and the public policy impact on chronic illness. (2.5 credits)

MCH 222ab. Social Services for Children, Adolescents, and Families (Newberger, Gary)

Presents the role of social services in maintaining and promoting the health of children and their families. Examines current political trends structuring the content and delivery of social services. (2.5 credits)

MCE 223b. Child and Adolescent Mental Disorders: Public Health Perspectives (Buka, Kindlon)

Examines the occurrence and risk factors of mental disorders of childhood and adolescence, including drug abuse and eating disorders. (1.25 credits)

MCH 297ab. Leadership in Minority Health Policy (Gardner, Reede)

Focuses on strategies for career development in minority health policy and on developing the leadership skills necessary for effective performance in areas of public health practice and public policy. (1.25 credits)

MCH 298cd. Issues in Minority Health Policy (Gardner, Reede)

Explores public policy issues affecting the health status of minority and disadvantaged populations, emphasizing problem identification, policy analysis, and program planning. (2.5 credits)

Independent Study, Field Experience

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research, undertake specialized readings, perform field projects, or carry out independent studies. Formal tutorials are offered in the areas of the urban child in global perspective (Earls), clinical effectiveness (Homer and Salem-Schatz), and infant assessment in the context of prenatal exposures (Tronick).

Department of Molecular and Cellular Toxicology

The goals of the Department of Molecular and Cellular Toxicology are to promote and conduct research and training on the effects of environmental chemicals on the health of human beings. In advancing an interdisciplinary approach to studies and research, the department aims to enhance the application of major recent advances in the biological sciences to toxicology and to enable students to work toward the solution of complex problems in environmental health.

The research and training program in the Department of Molecular and Cellular Toxicology explores the interactions of environmental chemicals with a variety of cellular and subcellular systems, the biochemical and molecular mechanisms of toxicity, and the health implications of environmental exposure. Modern toxicology is broad in scope and multidisciplinary in approach, using knowledge and techniques from the biological, chemical, physical, and medical sciences. It is often necessary to consider and analyze the relation between chemical, biological, and social factors affecting both the nature of and response to occupational or environmental exposure. For this reason, the department stresses interdisciplinary approaches that join the power of modern molecular genetics and cell biology with the problem orientation of public health.

Research and training cover such topics as receptor-mediated toxicity, tumor promotion, biochemical and genetic responses to oxidative stress, molecular and genetic toxicology, second messenger signaling systems, molecular biology

of DNA repair and mutagenesis in prokaryotes and eukaryotes, development and use of animal and human cell culture models, genetic recombination and predictive carcinogenesis, and molecular mechanisms of genetic instability in cancer and aging. Students learn to identify toxic agents and seek ways to prevent or reverse their detrimental effects when possible.

As described on the following page, the department offers a Doctor of Philosophy (PhD) program through the Biological Sciences in Public Health Program (a component of the Division of Medical Sciences, Graduate School of Arts and Sciences).

Professor Leona Samson's interests include the ways cells protect themselves against mutagenesis and cell death induced by DNA damaging agents.

For more information about the department, please contact Ilza Remar, Department of Molecular and Cellular Toxicology, 665 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-1178
Fax: 617-432-1780
E-mail: lremar@sph.harvard.edu

For application materials and information about admission to the PhD program, please contact the Division of Medical Sciences, Harvard Medical School, 260 Longwood Avenue, Room 435, Boston, MA 02115.
Phone: 617-432-0162

Applicants who have specific questions about the PhD program may contact Ruth Kenworthy, Division of Biological Sciences, 665 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-4470
Fax: 617-432-4098
E-mail: kenworthy@cvtlab.harvard.edu

After developing an interest in genetics in high school, Jie Zhu went on to earn a bachelor's degree in biology and a master's degree in genetics from Fudan University in China. She is currently investigating the links between chromosome recombination and cell mutation, using the yeast *Saccharomyces cerevisiae*.

"Before coming to HSPH," she said, "I was studying basic science. Here I get good scientific training, and I've also learned new ways to think about my work through courses in epidemiology, biostatistics, and others.

"What we learn here is more useful than basic science and more flexible than applied science. It's somewhere in between: we do the science and look for ways to apply our knowledge to improve people's lives."

Doctor of Philosophy in Biological Sciences in Public Health (BPH) (Molecular and Cellular Toxicology)

Students wishing to study cellular and molecular biology as they pertain to major problems in public health should apply to the Biological Sciences in Public Health program. This program offers the PhD degree through Harvard University's Graduate School of Arts and Sciences, Division of Medical Sciences, Committee on Biological Sciences in Public Health.

The PhD program within this department is designed to offer advanced training in modern molecular and cellular toxicology. The program offers a firm foundation in the basic biomedical sciences, as well as in epidemiology and biostatistics. Specific courses supplement this core, as dictated by individual research concentrations. Students in this program engage in laboratory rotations in three different research areas to enable them to assess realistically their interests in a thesis project and to evaluate the suitability of the laboratory and the mentor. At the completion of these rotations, students select an area of concentration and a thesis research labora-

tory and complete the required curriculum. A qualifying examination must be passed before engaging in thesis work, and the thesis must be defended before the granting of the PhD. Some students also participate in the Harvard-Markey Biomedical Scientist Training Program, which is designed to offer PhD students a greater knowledge of human biology and disease.

Applicants generally have a bachelor's degree and demonstrated competence in organic and biological chemistry, general biology, physics, and calculus. Those deficient in one

of these areas may be admitted provisionally on the condition that appropriate courses will be taken before and/or after entering the program. Applicants must take both the GRE general and subject tests by October in order to meet the application deadline of December 15.

All students admitted to the program receive a stipend and tuition support. Students are encouraged to apply for fellowships from outside sources since certain external fellowships provide higher stipends. While funds to support international students are limited, one special scholarship is available each year for a student from a developing, sub-Saharan African country. There is also a university-wide fellowship program that provides funding to qualified underrepresented minority students in the sciences.

Graduates ordinarily assume positions as faculty members and research scientists in graduate schools, medical schools, research institutes, or schools of public health. Career opportunities in the biological sciences as they apply to public health are expected to grow both in academia and in the biotechnology and pharmaceutical industries.

Courses Offered by the Department of Molecular and Cellular Toxicology, 1997-98

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1998 summer sessions).

TOE 204ab. Principles of Toxicology (Schiestl, Milton)

Emphasizes mechanisms of injury and clinical consequences following exposures to environmental and occupational chemicals. Examines actions at the molecular, cellular, organ system, and organismal levels. Discusses methods for detecting, evaluating, analyzing, and combating toxic effects. (5 credits)

TOX 212cd. Molecular and Cellular Endocrinology (Tashjian)

Examines current knowledge and experimental approaches to understanding the biosynthesis and secretion of peptide and steroid hormones, and the biochemical and molecular mechanisms by which hormones act on target cells to regulate differentiated functions. Topics include structure and regulation of protein hormone genes, hormone receptor structure and transduction mechanisms, and control of cellular calcium. (5 credits) Not offered 1997-98.

TOX 225cd. Genetic Toxicology (Samson)

Explores the biological consequences of the interaction of toxic agents with the genome. Topics include DNA structure, chemical reactivity, repair, damage-inducible processes, mutagenesis, and mutational spectra, cell death by apoptosis, and genetic toxicity testing. (5 credits) Not offered 1997-98.

TOX 250cd. Molecular and Cellular Toxicology (Demple)

Examines key issues and approaches in modern toxicology, focusing on emerging research at the molecular and cellular levels. Topics include genetic toxicol-

Professor and chair Armen Tashjian studies signal transduction mechanisms and receptor-mediated toxicity.

ogy, pathology of the cell cycle, carcinogenesis, molecular epidemiology, and risk analysis. (5 credits) Offered 1997-98 and alternate years.

Independent Study

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research or to undertake specialized readings or studies in molecular, cellular, biochemical, and environmental toxicology.

Faculty

Department Chair: Armen H. Tashjian, Jr., MD (Harvard University); Professor of Toxicology; Professor of Biological Chemistry and Molecular Pharmacology, Harvard Medical School. Development and exploitation of differentiated cell culture systems for mechanistic studies on uptake, metabolism, and cytotoxic actions of environmental chemicals; mechanism of action for tumor promoters, genetic and biochemical studies in hereditary human cancer, membrane transduction and signaling mechanisms.

Bruce Demple, PhD (University of California, Berkeley); Professor of Toxicology. Repair enzymes for oxidative DNA damage; molecular biology of cellular responses to oxidative stress.

Leona D. Samson, PhD (London University); Professor of Toxicology. Cell response to DNA damage at the biological, biochemical, and genetic levels; mechanisms of mutagenesis and cell killing.

Robert H. Schiestl, PhD (University of Vienna); Associate Professor of Toxicology. Mechanisms of DNA repair and recombination with relevance to carcinogenesis and gene targeting, examined through studies carried out in the yeast *Saccharomyces cerevisiae* in human and mouse cells and in transgenic animals.

Adjunct Faculty

Peter Ofner, MRSC PhD; Associate Professor, Department of Pharmacology and Experimental Therapeutics, Tufts University School of Medicine

Robert Schlegel, MPH, PhD; Manager, Corning Division, Ciba/Chiron Corporation.

Yuji Tanaka, MD; Assistant Professor of Medicine, University of Tokyo School of Medicine

The mission of the Department of Nutrition is to improve human health through enhanced nutrition. The department strives to accomplish this goal through research aimed at improved understanding of how diet influences health, the dissemination of new knowledge about nutrition to health professionals and the public, the development of strategies to enhance nutrition, and the education of researchers and practitioners.

The Department of Nutrition provides training and research opportunities in basic science relating to nutrition and in epidemiologic aspects of nutrition as they affect public health. Nutrition policy and the evaluation of nutritional interventions are long-standing interests of the department, particularly as they concern the populations of Latin America, Africa, Asia, and the United States. Interests of the department range from molecular biology to human studies of cancer and heart disease. Students learn and use the latest techniques in biochemistry, physiology, biostatistics, epidemiology, and related fields. Departmental research, whether basic or applied, is relevant to human health.

Current research covers a wide range of topics, including large prospective studies of dietary factors in relation to heart disease, cancer, diabetes, and ophthalmologic disease; development of methods to assess nutritional status by an analysis of body tissue; the interaction of nutritional factors with genetic determinants of disease; the interaction of nutritional factors and infectious agents; nutritional influence on blood pressure; effects of nutrition programs on the mental and physical consequences of malnutrition; nutritional determinants of blood lipid factors; lipoprotein metabolism; and regulation of the intra- and inter-cellular delivery of macromolecular nutrients.

Some graduates have assumed positions as faculty members and research scientists at medical schools, research institutes, and schools of public health; others have gone on to careers as public health nutritionists in international organizations or federal, state, or local governments. Career opportunities in the biological sciences as they apply to public health are expected to grow both in academia and in the biotechnology and pharmaceutical industries.

As described below, the department offers two doctoral programs. The first is a program in nutritional epidemiology/international nutrition leading to the Doctor of Science (SD) or Doctor of Public Health (DPH) degree. The second is a Doctor of Philosophy (PhD) program in nutritional biochemistry, offered through the Biological Sciences in Public Health Program (a component of the Division of Medical Sciences,

Graduate School of Arts and Sciences). Applicants for the nutritional biochemistry program who hold a clinical degree in medicine, veterinary medicine, or dentistry may prefer to follow a different curriculum leading to the Doctor of Science (SD) degree; this option may be available by special arrangement with the department. Please refer to page 8 for information about the Master of Public Health concentration in Family and Community Health. Funding may be available through the NIH-supported Training Program in Nutritional Science for students with previous doctoral degrees.

Doctor of Science in Nutrition/Doctor of Public Health

The program in Nutritional Epidemiology/International Nutrition leading to an SD or a DPH degree provides rigorous training in epidemiology and biostatistics as well as the biological aspects of nutrition. The overall objective is to enable students to investigate relationships between diet and disease.

The program includes formal course work, a practical research project, a seminar, and a thesis research project. Students must pass the departmental oral comprehensive examination and the school-wide oral qualifying examination and must complete, defend, and submit a thesis. In addition to fulfilling the school-wide doctoral requirements in introductory epidemiology (EPI 200 or EPI 201a) and intermediate biostatistics (BIO 210cd or BIO 211cd), students must complete a major (20 credits) in nutrition and two minors (10 credits each), one of which must be epidemiology. Students in a joint program with the Department of Epidemiology must satisfy the course requirements of both departments, select a minor field acceptable to both departments, and write a thesis on a topic concerning both nutrition and epidemiology.

Applicants must have a strong background in biology and mathematics. An MD or other professional health-related degree is desirable but not required. Admission to a joint program with Epidemiology requires the approval of both departments, and applicants should contact the Department of Nutrition before making formal application.

Doctor of Philosophy in Biological Sciences in Public Health (BPH) (Nutritional Biochemistry)

Students wishing to study cellular and molecular biology or physiology as they pertain to major problems in public health should apply to the Biological Sciences in Public Health program. This program offers the PhD degree through Harvard University's Graduate School of Arts and Sciences, Division of Medical Sciences, Committee on Biological Sciences in Public Health.

The PhD program in nutritional biochemistry provides students with rigorous training in biochemistry, cell biology, and metabolism that allows them to work toward solving nutritional and metabolic problems in the laboratory. The program also offers a firm foundation in epidemiology and biostatistics. Specific courses supplement this core, as dictated by individual research concentrations. Students in this program engage in laboratory rotations in three different research areas to enable them to assess realistically their interests in a thesis project and to evaluate the suitability of the laboratory and the mentor. At the completion of these rotations, students select an area of concentration and a thesis research laboratory and complete the required curriculum. A qualifying examination must be passed before engaging in thesis work, and the thesis must be defended before the granting of the PhD. Some students also participate in the Harvard-Markey Biomedical Scientist Training Program, which is designed to offer PhD students a greater knowledge of human biology and disease.

Applicants generally have a bachelor's degree and demonstrated competence in organic and biological chemistry, general biology, physics, and calculus. Those deficient in one of these areas may be admitted provisionally on the condition that appropriate courses will be taken before and/or after entering the program. Applicants must take both the GRE general and subject tests by October in order to meet the application deadline of December 15.

All students admitted to the PhD program receive a stipend and tuition support. Students are encouraged to apply for fellowships from outside sources since certain external fellowships

Faculty

Department Chair: Walter C. Willett, MD (University of Michigan), MPH, DPH (Harvard University); Fredrick John Stare Professor of Epidemiology and Nutrition; Professor of Medicine, Harvard Medical School. Relation of dietary factors to the occurrence of human disease, in particular heart disease and cancer.

Alberto Ascherio, MD (University of Milan), Diploma (London School of Hygiene and Tropical Medicine), MPH, DPH (Harvard University); Assistant Professor of Nutrition and Epidemiology. Relation of dietary factors to the occurrence of human disease.

Hannia Campos, MS, PhD (Tufts University); Assistant Professor of Nutrition. Human lipoprotein metabolism; cross-cultural studies of diet and cardiovascular risk factors with emphasis on Hispanic populations; gene-environment interactions; biochemical markers of dietary intake.

Wafaie W. Fawzi, MPH, SM, DPH (Harvard University); Assistant Professor of Nutrition. Etiologies of infectious disease with emphasis on dietary and nutritional causes; relationships of dietary factors to disease in pregnancy and childbirth.

Peter Goldman, AM (Harvard University), MD (Johns Hopkins University), Professor of Health Sciences in Nutrition, Maxwell Finland Professor of Clinical Pharmacology, Harvard Medical School. Metabolism of drugs and food constituents, particularly as carried out by intestinal bacteria; areas of metabolism and kinetics that may help to provide an understanding of a compound's biological activity.

Edgar Haber, MD (Columbia University); Elkan R. Blout Professor of Biological Sciences and Director of the Center for Prevention of Cardiovascular Disease; Professor of Medicine, Harvard Medical School. Identification of novel genes expressed in cells that contribute to the arteriosclerotic process with the goal of finding interventions that are unique to the arterial wall.

M. Guillermo Herrera-Acena, MD (Harvard University); Senior Lecturer on Nutrition. Epidemiology of protein-energy malnutrition and vitamin A deficiency; role of nutrition and other environmental factors in the etiology and management of diabetes mellitus.

Gökhan S. Hotamisligil, MD (Ankara University), PhD (Harvard University); Assistant Professor of Nutrition. Studies on the regulatory pathways that control energy metabolism; signal transduction in mammalian cells; biology of fatty acid binding proteins; genetic manipulation of mice.

Karen E. Peterson, RD (Peter B. Brigham Hospital), SD (Harvard University); Assistant Professor of Nutrition (Maternal and Child Health and Nutrition). Epidemiology of malnutrition in industrialized and developing countries.

Eric B. Rimm, SD (Harvard University); Assistant Professor of Epidemiology and Nutrition. Relation of dietary factors to the occurrence of human diseases, in particular cardiovascular disease

Meir J. Stampfer, MD (New York University), MPH, DPH (Harvard University); Professor of Epidemiology and Nutrition. Influence of diet and exogenous hormones on health, particularly heart disease and cancer.

Julia Hsu, who studied human physiology as an undergraduate and has earned an MPH in population/family studies and epidemiology, says that she has been impressed by the scholastic environment at HSPH: "Many of the instructors promote cooperation among students, rather than competition. It's important to learn how to work in teams, because that's how much of the work is done in public health."

"Public health research often takes place at the population level. But anything that benefits a large group begins with the individuals who comprise the population. I love this ability to help lots of people, while enjoying the human interaction found in working with small groups or individuals." Recently, Julia has demonstrated this dual effect by fielding health-related questions on a local Chinese-language radio show.

provide higher stipends. While funds to support international students are limited, one special scholarship is available each year for a student from a developing, sub-Saharan African country. There is also a university-wide fellowship program that provides funding to qualified underrepresented minority students in the sciences.

Courses Offered by the Department of Nutrition, 1997-98

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1998 summer sessions).

NUT 201b. Principles of Nutrition (Lo)

Emphasizes basic concepts of nutrition, including relationships between nutrition and problems such as cancer and heart disease. (2.5 credits)

NUT 202cd. The Science of Human Nutrition (Sacks, Lo)

Reviews the biochemistry of carbohydrates, fats, proteins, vitamins, and minerals in the context of human disease. Emphasizes current knowledge of the mechanisms that may explain the role of diet in the causation and/or prevention of ischemic heart disease, diabetes, obesity, hypertension, and cancer. (5 credits)

NUT 203ab. Human Nutrition/Nutritional Epidemiology Seminar (Willett)

Focuses on the development of methods and the analysis and interpretation of nutritional epidemiologic data. (1.25 credits)

NUT 204cd. Advanced Topics in Nutrition I (Hotamisligil)

Enables students to review and analyze recent key papers that provide either epidemiological or laboratory evidence that bears on a topic of current interest in human nutrition. Teaches skills necessary for oral presentation. (2.5 credits)

NUT 205ab. Advanced Topics in Nutrition II (Campos)

Extends NUT 204cd by allowing students to participate in and present seminars reviewing current research and publications

related to nutrition, and to attend advanced seminars presented by faculty and guest speakers. Provides practical training in communication skills for oral presentation. (2.5 credits)

NUE 207cd. Scientific Writing in Nutrition and Epidemiology (Stampfer)

Covers organization of scientific papers, presentation of data in graphical and tabular forms, and style. Designed for advanced students beginning to work on a paper for publication. (2.5 credits)

NUT 209ab. Seminars in Food Science and Technology (Herrera-Acena, Lo)

Examines the effects of genetic engineering, changes in food preservation and storage technology, marketing practices, and cooking on diet composition and public health. (2.5 credits) Offered 1997-98 and alternate years.

Interdisciplinary Program in Infectious Disease

Education and research on infectious disease is available through the Interdisciplinary Program in Infectious Disease. Students in this program fulfill the departmental requirements for doctoral students with additional coursework in biology, quantitative methods, and infectious disease. For more information on this program, see page 5.

NUT 210cd. Nutritional Problems of Less-Developed Countries (Herrera-Acena)

Discusses the nutrition problems of less-developed countries in the context of basic human needs. Reviews the ecological, biological, and behavioral consequences of malnutrition and emphasizes issues in human biology relevant to the formulation of nutrition policy and programs. (2.5 credits)

NUE 212b. Nutrition and Heart Disease (Sacks, Stampfer)

Covers the relationship between diets, nutrients, and cardiovascular disease from the perspectives of epidemiology, clinical trials, and metabolism. Topics include dietary fats, minerals, antioxidants, the folate/homocysteine system, obesity, hypertension, and stroke. (1.25 credits)

NUT 214abcd. Research Techniques in Nutritional Biochemistry (Wessling-Resnick)

Enables students to rotate through the laboratories of faculty members in the Nutritional Biochemistry Program in order to learn current techniques applied to nutritional, cellular, and biochemical research. (10 credits)

NUE 216cd. Nutritional Epidemiology I (Willett, Hankinson)

Reviews methods for assessing the dietary intake of populations and individuals. Students gain experience in the collection, analysis, and interpretation of dietary intake data, and learn to integrate information from international studies, secular trends, clinical trials, analytical epidemiology, and animal experiments. (2.5 credits)

NUE 218ab. Nutritional Epidemiology II (Ascherio)

Addresses methodological aspects of research in nutritional epidemiology. Topics include validation studies, adjustment for energy intake, and correction of measurement error. (2.5 credits) Offered 1997-98 and alternate years.

NUT 301. Nutrition/Health Promotion in the Mass Media (Willett, Cheung)

Focuses on the role of the mass media in the promotion and adoption of healthy eating practices. Examines the import of the extent and quality of coverage in various mass media outlets, strategies for creating messages for mass media use, and the effectiveness of existing mass communication campaigns in nutrition. (Credit to be arranged)

Independent Study

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in department research or to undertake specialized readings or studies in the following areas: a) nutrition and other environmental factors in the etiology and management of diabetes mellitus (Herrera-Acena); (b) the surveillance and epidemiology of nutrition in industrialized and developing countries (Peterson); (c) regulation of the cellular uptake of macromolecular nutrients (Wessling-Resnick); (d) nutritional epidemiology (Willett); and (e) regulation of the altered amino acid metabolism that occurs in catabolic disease states (Souba).

Marianne Wessling-Resnick, MS (University of Chicago), PhD (University of Massachusetts); Associate Professor of Nutrition. Regulation of the cellular uptake of macromolecular nutrients; molecular basis of iron transport.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School.

Edward L. Giovannucci, MD (University of Pittsburgh), MPH, SD (Harvard University); Assistant Professor in the Department of Nutrition. Etiologies of cancer with emphasis on dietary causes; methodologies to measure dietary factors in epidemiologic studies.

Clifford W. Lo, MD (University of Hawaii), MPH (University of California, Los Angeles), ScD (Massachusetts Institute of Technology); Assistant Professor in the Department of Nutrition. Calcium, vitamin D, and parathyroid metabolism; total parenteral nutrition and nutritional support; intestinal absorption and gastrointestinal immunity.

Frank M. Sacks, MD (Columbia University); Associate Professor in the Department of Nutrition. Human lipoprotein metabolism; effects of diet and hormones; dietary fatty acids, cardiovascular disease, and cancer.

Wiley W. Souba, MD (University of Texas at Houston), SD (Harvard University); Professor in the Department of Nutrition. Nutrition, metabolism and cancer; impact of glutamine nutrition on cellular function, metabolism, and structure.

W. Allan Walker, MD (Washington University); Professor in the Department of Nutrition. Gastrointestinal immunology; developmental gastroenterology; protective functions of breast milk

Adjunct Faculty

Antonia Polychronopoulou-Trichopoulou, MD, PhD, MPH; Professor and Director, Department of Nutrition and Biochemistry, Athens School of Public Health.

Department of Population and International Health

The goal of the Department of Population and International Health is to help advance world health through research and by encouraging the growth of relevant skills and knowledge, particularly in developing countries. To achieve this goal, the department's faculty, students, and research fellows generate knowledge through interdisciplinary research, strengthen skills and capacities through education, and promote international scientific cooperation through collaborative activities.

The 1996-97 fellows of the Takemi Program in International Health. The fellows come to the school to pursue research and advanced training in international health with an emphasis on the needs of developing countries.

The mission of the Department of Population and International Health is centered on a philosophy of global health equity in which mutual learning and exchange are fostered in an independent university committed to scholarship and education. World population and health are in rapid transition in the late twentieth century, and changes in demography, health threats, and health policies are under way in virtually all societies, rich and poor. In developing countries, research and education are essential for the diagnosis of public health problems, the development of innovative policy responses, the application of new health technologies, and the expansion of basic and applied knowledge.

Faculty in the department are specialists in various disciplines associated with population and international health: anthropology, demography, ecology, economics, epidemiology, ethics, medicine, political science, reproductive biology, and sociology. Their research spans a wide spectrum of interests, including aspects of social and economic development, health policy, and demography; design and financing of health care systems; reproductive health and child survival; human rights; and programs concerned with the prevention and control of AIDS, tuberculosis, cholera, and diarrheal diseases.

Students in the department come from a variety of backgrounds. Most have had advanced training in the biological or social sciences or extensive experience in applied fields relevant to population sciences, although some begin with bachelor's-level training in these fields. Many students are from developing countries, and all have an interest in the health of disadvantaged populations worldwide.

As described below, the department offers both a four-semester Master of Science (SM) program and a program leading to the Doctor of Science (SD) or Doctor of Public Health (DPH) degree. In addition to these programs, the department hosts research fellows and short-term executive trainees in population and health research, and supervises cooperative technical projects overseas. Please see page 8 for information about the Master of Public Health concentration in International Health.

Master of Science in Population and International Health

The SM program, which is completed in four semesters, equips students with the skills and knowledge required by professional organizations active in the fields of population and international health. Recent graduates have taken such positions as consultant on family planning and service delivery in women's health for United Nations' organizations, and consultant to the Population Council. Others proceed from the SM to the doctoral program.

Applicants must have a bachelor's degree or equivalent, though many students hold advanced degrees in medicine or a social science discipline. Preference is given to those with relevant work experience.

Of the 80 credits necessary to complete the master's program, about half are earned in required courses. Some of these are departmental requirements, including a 5-credit master's thesis, while others represent school-wide requirements in biostatistics and epidemiology. The remaining credits allow students to specialize in particular areas of interest under the guidance of faculty advisors.

The first year of study is usually devoted to full-time course work. During the summer between the first and second years, students are encouraged to undertake internships providing practical experience in population and international health. The second year usually involves a combination of course work and completion of the master's thesis.

Doctor of Science in Population and International Health/Doctor of Public Health

The doctoral programs prepare students to assume professional leadership positions in public health in their own country or with international agencies, foundations, and organizations, or to undertake academic careers. Recent graduates have taken positions such as director of population and epidemiology in a national ministry of health and director of a population research organization.

The programs are designed for those who have achieved an outstanding record in the master's program or in an equivalent program at another university. The SD program is intended for those holding a master's degree in social sciences, economics, statistics, mathematics, law, or one of the non-medical sciences. Candidates with exceptional preparation may be admitted without a master's degree. The DPH program is customarily restricted to persons holding a degree in medicine, dental medicine, or veterinary medicine and a Master of Public Health degree from an approved institution. After admission, both degrees have identical course, examination, and thesis requirements.

Two academic years of full-time residence at the graduate level is required. The first year is ordinarily devoted to course work. The second year usually involves both course work and research planning. Subsequently, additional courses are taken to fulfill remaining requirements and/or to gain special skills related to thesis research. The pace of progress depends largely on the student's individual plan, which is designed in collaboration with an advisor and thesis committee. Ultimately, students must demonstrate detailed knowledge and understanding of a major field (20 credits) and two minor fields (10 credits each), must pass both the departmental written examination and the school-wide oral qualifying examination, and must prepare, defend, and submit a thesis based on original research.

The major field must be chosen from one of the three areas of concentration offered by the department, as described below. Minor fields may also be chosen from the department or from allied departments of the school or university, including the Departments of Biostatistics, Epidemiology, Health and Social Behavior, Tropical Public Health, Nutrition, or Maternal and Child Health. The departmental concentrations promote skill development, encourage multidisciplinary approaches to health problems, and provide opportunities for extensive linkages in diverse field settings in Africa, Asia, or Latin America.

Population and Reproductive Health This concentration is designed for students with an interest in the interdisciplinary study of human fertility, health, and mortality, and who desire a

Faculty

Acting Department Chair: Michael R. Reich, AM, PhD (Yale University); Taro Takemi Professor of International Health Policy. Political economy of health and development; health consequences of development policy; health policy in Japan.

Iain W. Aitken, BM (Cambridge University), MPH (Harvard University); Lecturer on International Health. Maternal health care; management of primary health care workers; design and financing of urban health care systems in developing countries.

William Alonso, MCP (Harvard University), PhD (University of Pennsylvania); Richard Saltonstall Professor of Population Policy; Member of the Faculty of Arts and Sciences. Issues of regional development; migration policies.

Peter A. Berman, MSc, PhD (Cornell University); Associate Professor of International Health Economics. Health care financing in developing countries; economic assessment of health policies and programs.

David E. Bloom, MA, PhD (Princeton University); Professor of Population and Health Economics; Deputy Director, Harvard Institute for International Development. Applied micro-economics: labor, population, health, development, and environment; demography.

Richard A. Cash, MD (New York University), MPH (Johns Hopkins University); Lecturer on International Health; Institute Fellow, Harvard Institute for International Development. Development of health systems for rural and urban populations in developing countries.

Lincoln C. Chen, MD (Harvard University), MPH (Johns Hopkins University); Professor of International Health. Biochemical, clinical, and field studies of cholera and diarrheal diseases; epidemiology of malnutrition; demography, mortality, and health policy in developing countries. (On leave until January, 1999)

Arthur J. Dyck, AM (University of Kansas), PhD (Harvard University); Mary B. Saltonstall Professor of Population Ethics; Member of the Faculty, Harvard Divinity School. Concepts of human rights, including ethical issues.

For more information about research and training in Population and International Health, please contact the Education Office, Department of Population and International Health, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-2253

Fax: 617-566-0365

E-mail: ajiamong@sph.harvard.edu

Timothy G. Evans, DPhil (Oxford University), MD (McMaster University); Assistant Professor of International Health Economics. Impact and assessment of chronic disease; assessment of blindness and the associated mortality, morbidity, and socioeconomic sequelae. (On leave until July, 1998)

Joseph J. Harrington, AM, PhD (Harvard University); Professor of Environmental Health Engineering (Environmental Health and Population and International Health); Gordon McKay Professor of Environmental Engineering, Faculty of Arts and Sciences. Water resources planning and quality management; environmental monitoring and control systems; applied statistics for modeling; management for tropical disease control.

Allan G. Hill, PhD (University College, Durham), Diploma in Demography (Princeton University); Andelot Professor of Demography. Demography of the Middle East and West Africa; impact on mortality of child survival programs; modern contraception and reproductive health.

Ulla M. Larsen, MA (Odense University, Denmark), PhD (Princeton University); Associate Professor of Demography. Interface of demography and health; sterility and reproductive health; focus on Africa.

Richard Levins, PhD (Columbia University); John Rock Professor of Population Sciences. Human ecology; viability of populations and environments; special interest in Caribbean region.

Jonathan M. Mann, MD (Washington University), MPH (Harvard University), François-Xavier Bagnoud Professor of Health and Human Rights, Professor of Epidemiology and International Health, and Director of the François-Xavier Bagnoud Center for Health and Human Rights. AIDS, HIV infection, and communicable disease epidemiology. (Until January, 1998)

After earning a bachelor's degree in African studies and social sciences, Kelly Blanchard traveled to Ghana as a Fulbright Scholar to research the resurgence of traditional religion. While there, she saw that many of the development plans created for the area by international organizations were well-intentioned but ignorant of local cultures and systems. "There was an organization," she said, "that presented valuable workshops on basic accounting principles for small-business-owning women.

But they kept scheduling them for the day of the week that is the women's traditional market day, and the organization couldn't figure out why attendance at their programs was low.

"It seemed to me that there was a lot of obvious work to be done in African health—things like clean water, basic childhood immunizations, birth and postnatal services for women—and that the technology to solve a lot of these problems existed. The questions were how to design, fund, and implement quality programs. I decided to go back to school for a master's degree because I wanted to be able to answer these questions."

population-based perspective on the changing patterns of mortality and morbidity worldwide. A core curriculum provides students with the basic skills to measure demographic and health trends, and to understand how fertility, mortality, age structure, and reproductive health are inextricably linked. Students become familiar with the global and regional components of reproductive health, and its determinants and consequences. International and local policies as well as services for promoting family planning, reproductive health, and family health are examined and their impact evaluated.

The program stresses a population-based approach to international health issues. Comparative analysis is used to highlight disparities, similarities, and differences between developed and developing countries' experiences, and between different social classes within a single population. There is a strong emphasis on field methods and practical aspects of data collection, analysis, and presentation. Though faculty are drawn from a variety of disciplinary backgrounds, all have close contact with contemporary population and reproductive health problems in developing countries.

Faculty research in this concentration includes the design and use of qualitative and quantitative methods for the study of reproductive mortality and morbidity; infertility and its determinants and consequences; sociocultural and biomedical determinants of contraceptive acceptability; the design and evaluation of family planning and reproductive health services; gender-based perspective and differentials in health and mortality; intergenerational relations in developing countries; and policy reform following the 1994 Conference on Population and Development.

This concentration has strong regional interests in

South and East Asia, sub-Saharan Africa, North Africa, and the Arab world.

Women and Health

HSPH offers a number of courses relating to women and health. For more information, see page 63.

International Health Policy and Economics This concentration is designed for students who wish to develop skills and pursue research on health policies and health economics of developing countries, including institutional and political analysis, health economics and financing strategies, project planning and evaluation, and comparative economics. Students develop both quantitative and qualitative skills in the analysis of health policy or economics within the broader context of international development.

Students also develop methodologic and substantive expertise in the analysis of international development and health. Methods include case study techniques, survey research, experimental design, cost-effectiveness analysis, econometric methods, decision analysis, epidemiologic methods, and statistical methods for addressing

The Takemi Program in International Health

This is a nondegree program offering fellowships for research and advanced training on critical issues of international health, especially those related to developing countries. The program is interdisciplinary in nature, and addresses problems of mobilizing, allocating, and managing scarce resources to improve health, and of designing strategies for disease control and health promotion. Fellows' research is usually related to a policy problem in their own country.

Takemi fellows are professionals and scholars from around the world with training and experience in public health, medicine, economics, policy analysis, biological science, and other fields. The program enables individuals in the early or middle stages of their careers to strengthen their knowledge of disciplines such as economics, epidemiology, policy formulation, political analysis, or the use of quantitative analytic methods. It is not designed for projects with biomedical laboratory requirements.

The program can fund a limited number of fellowships each year and can assist in identifying external sources of funding, which applicants are encouraged to pursue.

For more information about the Takemi Program in International Health, contact Michael R. Reich, PhD, 665 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-0686
Fax: 617-432-1251
E-mail: lzahner@sph.harvard.edu

policy and economic issues. Possible substantive minors include health and development, environment and development, demographics and policy, and evaluation of development efforts. Many methodological and substantive courses are offered in other Harvard schools.

International Health Epidemiology and Ecology
This concentration is designed for students who wish to take a broad, integrated approach to researching health problems and in developing the methods for such study. Students will develop an understanding of health as part of the relationships between people and between humans and nature in the contexts of evolution, environmental change, infectious disease ecology, economic development, and demography. Through this process, students will gain skills to identify the determinants, consequences, and dynamics of health problems; and learn to plan,

implement, and evaluate health promotion and disease prevention strategies and programs.

The epidemiologic component of this area emphasizes the application of the combination of ecological, population-genetic, and evolutionary theories with qualitative mathematical methods on international patterns of health and disease. The ecological aspect of the curriculum focuses on health aspects of ecology and the inseparability of social and biological aspects of human ecology. Students also acquire in-depth knowledge of a sampling of major disease problems, ecological habitats, and health programs.

Courses Offered by the Department of Population and International Health, 1997-98

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1998 summer sessions).

PIH 191cd. Cities and Regions (Alonso)

Stresses the interaction of societies and their geographies, focusing on historic and current developments in the US. Considers demography, technology, institutions, ideology, health, the economy. (5 credits)

Interdisciplinary Program in Infectious Disease

Additional doctoral-level educational and training opportunities relating to infectious diseases are available through the Interdisciplinary Program in Infectious Disease. Students in this program fulfill the departmental requirements for doctoral students with additional coursework in biology, quantitative methods, and infectious disease. For more information on this program, see page 5.

Christopher J. L. Murray, MD (Harvard University), DPhil (Oxford University); Associate Professor of International Health Economics. Tuberculosis control strategies, with an emphasis on cost-effectiveness; health transition studies.

A. K. Nanda Kumar, MSc (Bangalore University), MA, PhD (Boston University); Assistant Professor of International Health Policy and Economics. Public and private roles in financing and providing health care services; econometric models of demand and demand equations for health care in developing countries.

Carla M. Obermeyer, MA, MSc (American University of Beirut), SD (Harvard University); Associate Professor of Population and Anthropology. Utilization of maternal and child health services in developing countries, especially the Middle East and Africa.

M. Omar Rahman, MD (Northwestern University), MPH, SD (Harvard University); Assistant Professor of Demography and Epidemiology. Healthy aging in rural societies; determinants of pregnancy outcomes in developing countries; assessment of adult health status and international comparisons of gender differences; assessment of quality of health care services; socioeconomic determinants of adult health.

Chi-Man (Winnie) Yip, PhD (Massachusetts Institute of Technology); Assistant Professor of International Health Policy and Economics. Application of economic models and econometric techniques to study of health care policies.

The following faculty members have secondary appointments at HSPH. Their primary affiliation is with Harvard Medical School.

Mary Carlson, MA (University of Wisconsin), PhD (Northwestern University), MPA (Harvard University), Associate Professor in the Department of Population and International Health. Recovery of behavioral function after brain damage or sensory deprivation, consequences of social deprivation in institutionalized infants, street children and child rights legislation in Brazil.

Harald K. Heggenhougen, MA, PhD (New School for Social Research); Associate Professor in the Department of Population and International Health. Medical anthropology as applied to international health.

Mary E. Wilson, MD (University of Wisconsin); Assistant Professor in the Departments of Population and International Health and Epidemiology. Infections acquired during travel and residence in tropical and developing countries.

Grace Wyshak, SM (Harvard University), PhD (Yale University); Associate Professor in the Departments of Biostatistics and Population and International Health. Biostatistical and demographic methods; women's reproductive health.

Adjunct Faculty

Sudhir Anand, DPhil; University Lecturer in Quantitative Economic Analysis, Oxford University. Acting Director of the Harvard Center for Population and Development Studies.

John C. Caldwell, PhD; Professor and Chairman, Department of Demography, Australian National University.

Adetokunbo O. Lucas, MD, SM; consultant.

Gita Sen, MA, PhD; Professor, Indian Institute of Management, Bangalore, India.

PIH 200a. Population and Health (Rahman)

Teaches the population-based approach to give insight into international public health issues. Reviews the links between fertility, mortality, and reproductive health, and examines health and mortality transitions in developed and developing countries. (2.5 credits)

PIH 203cd. Computer Methods for Demography and International Health (Atwood, Larsen)

Covers computer techniques required for the design, collection, management, and analysis of types of data commonly encountered in population and health surveys in developing countries. Provides students with the computer skills needed in PIH 221c and PIH 222d. (2.5 credits)

PIH 211b. Financial Control in Health Organizations (Campbell)

Introduces topics critical in managing health organizations and programs in developing countries, including the language and analytical methods of financial control. (2.5 credits)

PIH 212c. Sociocultural Dimensions of International Health (Heggenhougen)

Reviews the relevance of sociocultural factors and elaborates the contributions of medical anthropology to international public health. Topics include health-seeking behavior, professional and public health education, and anthropological approaches to tropical diseases. (2.5 credits)

PIH 213d. Management Information Systems for Third World Health Systems (Lamstein, Reich)

Explores theoretical and practical concepts of information systems design. Begins with basic concepts of management, information theory, and systems analysis and proceeds to develop a general understanding of the design considerations of MIS. (2.5 credits)

PIH 216d. Child Rights/Child Health (Gruskin, Reich)

Focuses on international human rights norms, institutions, and procedures and their application to selected topics in child health, including disability, refugee status, and HIV/AIDS infection. (1.25 credits)

PIH 217d. How Vulnerable Are We to HIV? (Tarantola, Gruskin, Reich)

Provides a method for assessing individual and collective vulnerability to the HIV/AIDS epidemic. Considers the sensitivity, specificity, and applicability of assessment methods at different stages of the pandemic. (2.5 credits)

PIH 218c. Health and Human Rights (Gruskin, Reich)

Topics include the impact of health policies and programs on human rights, health consequences of human rights violations, and the linkage between promoting and protecting health and promoting and protecting human rights. (2.5 credits)

PIH 220ab. Introduction to Demographic Methods (Gardner, Hill)

Presents the main demographic approaches to the study of population structure and dynamics, including data sources, age and sex composition, growth, fertility, nuptiality, and mortality. (2.5 credits)

PIH 221c. Fertility Analysis (Larsen)

Enables students to produce an analysis of recent patterns, trends, and differentials in fertility in a form useful for policy-making. Introduces data sources useful for estimating and interpreting fertility changes. (2.5 credits)

PIH 222d. Mortality Analysis (Hill)

Explains how childhood and adult mortality is measured when registration data are lacking. Shows how data from surveys and routinely collected health data may be used for mortality assessments. (2.5 credits)

PIH 224d. The Epidemiology of the Family (Rahman)

Explores how membership in a family affects one's health and survival, including investigations of the social, economic, behavioral, informational, and biological links between individuals and their kinship group. (2.5 credits)

PIH 225c. Qualitative Research Methods for Population and Health (Obermeyer)

Introduces the assessment and measurement of sociocultural factors in demographic and health research. Covers field methods in anthropology and the recording, management, and analysis of data. (2.5 credits)

PIH 227b. Culture, Health, and Reproduction (Obermeyer)

Uses the concepts of anthropology to understand health and reproduction in their sociocultural context. Topics include reproduction and menstruation, cultural notions of reproductive health and family planning, gender inequality, breastfeeding and child nutrition. (2.5 credits)

PIH 229c. The Analysis of Event Histories (Larsen)

Increases familiarity with different event history analysis techniques, such as actuarial tables and Cox models. Emphasizes understanding the underlying theory and main assumptions, as well as the interpretation of results. (2.5 credits) Not offered 1997-98.

PIH 233b. Biological and Clinical Foundations of Reproductive Health (Aitken)

Introduces the anatomy and physiology of human reproduction, and covers the essential clinical features of common complications of pregnancy, childbirth, and reproductive tract infections. (2.5 credits)

PIH 234c. Maternal and Perinatal Health Care in Developing Countries (Aitken)

Covers the biology and epidemiology of maternal and perinatal health problems in developing countries. Teaches students to evaluate the absolute and relative importance of causes of obstetric morbidity and mortality and of low birthweight, and to evaluate the effectiveness of prevention strategies. (2.5 credits)

PIH 236c. Fertility-Regulating Technologies

Explores the biologic, health, and political dimensions of contraceptive and abortifacient technologies and applies clinical trial and regulatory processes to fertility-regulating technologies. (2.5 credits)

PIH 238d. Infectious Reproductive Morbidity and Infertility

Provides an overview of the global epidemiologic patterns, causal mechanisms, and biologic consequences of reproductive tract infections, including an evaluation of diagnostic methods. (2.5 credits)

PIH 240d. Political Economy of International Health Policy (Reich)

Examines issues of health and development in the context of international politics and economics. Explores ways in which relations between developed and developing countries affect the formulation and implementation of health policy. (2.5 credits)

PIH 241c. Health Planning in Developing Countries: Cost-Effective Analysis and Priority-Setting Techniques (Murray)

Teaches applied skills needed for the economic evaluation of health projects, interventions, and programs. Emphasizes cost-effectiveness and its use in sectoral resource allocation decisions, including ethical underpinnings. (2.5 credits)

PIH 244b. Health Sector Reform: A Worldwide Perspective (Nanda Kumar)

Surveys health and health sector policies in developing countries and current methods for their analysis and reform. Introduces analytical tools for policy analysis related to financing, benefit packages, politics, health care organization, and consumer and household behavior. (2.5 credits)

PIH 245ab. Population and Development: International Policymaking and Implementation (Zeidenstein, Hill)

Covers the historical and contemporary development and implementation of population policies within the context of international development, focusing on the roots and history of population policy, ethical and gender issues, and resources and implementation. (2.5 credits)

PIH 246cd, 247cd. Doctoral Seminar in International Health Policy and Economics (Reich, Berman, Murray, Yip, Hsiao, Nanda Kumar)

Explores important international health policy and economics research topics. Emphasizes theoretical frameworks, analytical techniques, empirical applications, and technical results. (1.25 credits each semester)

PIT 250b. Epidemiology of Infectious Diseases of Public Health Importance in Developing Countries (Cash)

Reviews the epidemiology of infectious diseases of public health importance in developing countries. Emphasizes epidemiologic patterns of bacterial and viral diseases as they relate to different geographic and socioeconomic environments. (3 credits)

PIH 251d. Evaluating the Impact of Health Interventions in Developing Countries (Hill)

Introduces the principles and practice of evaluating the mortality and morbidity outcomes of health interventions in developing countries. Includes topics in data collection, health impact measurements, and design of impact evaluations. (2.5 credits)

PIH 253b. Human Ecology (Levins)

Provides a broad overview of the human ecosystem as it emerges out of, but differs from, pre-human ecology. Topics are selected from biosphere processes, population interaction, agricultural systems, adaptation evolution and ecology of disease, ecological politics, and evolution. (2.5 credits)

PIH 254d. Tuberculosis: Epidemiology and Control (Murray)

Covers the basic epidemiology of tuberculosis measurement, including the impact of HIV on tuberculosis epidemiology; passive and active diagnostic strategies; the role of chemoprophylaxis; chemotherapy supervision; and case studies of successful control programs. (2.5 credits)

PIH 257d. New and Resurgent Disease (Levins)

Covers new and resurgent disease as a general problem of evolutionary ecology and social change. Topics include disease and changes in the environment or population. (1.25 credits)

PIH 258b. The Frontiers of Knowledge in HIV/AIDS Prevention, Care, and Research (Mann, Tarantola)

Provides an update on the current state of knowledge about HIV/AIDS epidemiology, prevention, care, and research. Covers the scientific, technical, programmatic, and policy aspects of the response to HIV/AIDS in the US and elsewhere. (2.5 credits)

PIH 261cd. Mathematical Models in Biology and Public Health (Levins, Awerbuch)

Examines mathematical models as a basis for analyzing biological and social phenomena relevant to public health. Topics include the spread and maintenance of infectious diseases, and diffusion bioassays for determining toxicity and mutagenicity of drugs. (2.5 credits)

PIH 263e. Grant Writing for Funding of Research and Health Care Projects (Dumbaugh, Cash)

Provides participants with the opportunity to prepare a grant proposal for submission to a funding agency, a framework for writing proposals for research or other projects, and information about organizations that fund such work. (1 credit)

Independent Study

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research, undertake specialized readings, or carry out independent studies.

Department of Tropical Public Health

The Department of Tropical Public Health contributes to the health of people around the world through research and training focused on the biological and ecological aspects of parasitic and other infectious disease. The department offers opportunities for basic study of the biology of parasitism and applied research aimed at the development of vaccines and of improved tools for diagnosis and disease control.

John David, professor and chair of the department, studies the biology of parasitism, spending part of each year in Brazil investigating problems of host resistance, risk factors, and control strategies.

Members of the Department of Tropical Public Health take a multidisciplinary approach to infectious diseases, which includes immunology, molecular biology, public health entomology, cell biology and ultrastructure, biochemistry, pathology, and epidemiology. They undertake research both within the school and around the world. Current departmental research includes immunology of schistosomiasis, leishmaniasis, filariasis, onchocerciasis, and tuberculosis; molecular biology of malaria, schistosomiasis, filariasis, amoebiasis, giardiasis, tuberculosis, and Lyme disease; development of specific DNA probes to detect infectious agents; epidemiology and control of malaria, schistosomiasis, and leishmaniasis; pathogenesis of lymphatic filariasis and

onchocerciasis; and public health entomology and ecology of Lyme disease and ehrlichiosis.

Applicants should have a background in biological sciences. They must hold at least a bachelor's degree, and may also enter at any level of advanced training. Applicants with a doctoral degree in medicine, dentistry, veterinary medicine, behavioral sciences, other natural and social sciences, law, economics, and engineering are also considered for admission.

In addition to meeting school-wide core requirements in biostatistics and epidemiology, all students in the department are required to take TPH 201a, *Ecology, Epidemiology, and Control of Important Parasitic Diseases of Developing Areas*; at least 7.5 credits (5 credits for students in two-semester programs) in parasite and/or vector biology, such as TPH 208cd, *Immunology of Infectious Diseases*, or TPH 216cd, *Cellular and Molecular Biology of Parasites*, and TPH 206d, *Principles of Public Health Entomology*; and ID 201cd, *Biology, Epidemiology, Economics, and Policy (BEEP): Malaria*, or TPH 203c, *Tuberculosis*. Students in the four-semester program also must take at least 5 credits in biochemistry, cell biology, genetics, population genetics, or immunology at HSPH or other Harvard schools, and 10 credits of research. Students in the four-semester program who expect to pursue professional, rather than academic, careers must also complete core courses in environmental health, health policy and management, and social and behavioral sciences. Students in the doctoral programs must take additional advanced coursework, pass a qualifying examination, and complete thesis research.

As described below, the department offers both a four-semester and a two-semester Master of Science (SM) program, a program leading to the Doctor of Science (SD) degree, and a Doctor of

Philosophy (PhD) program offered through the Biological Sciences in Public Health Program (a component of the Division of Medical Sciences, Graduate School of Arts and Sciences). Please see page 8 for information about the Master of Public Health concentration in International Health. The department offers four distinct areas of study, each applicable to one or more of the degree programs.

Tropical Public Health This concentration, in which students may earn a two-semester or a four-semester SM degree, provides students with the background necessary for research or service careers in developing countries. Master's degrees in tropical public health can lead to positions within the health policy and technology industry, as well as at the Centers for Disease Control and Prevention (CDC) and the World Health Organization (WHO). The two-semester program provides a background in infectious diseases useful to practicing physicians and field researchers. In addition to the core courses outlined above, focused course work tailored to the student's interests is strongly encouraged within immunology, molecular biology, cell biology, or parasitology.

Vector Biology, Ecology, and Control This area of interest, in which the department offers both a four-semester SM and an SD program, focuses on the manner in which blood-feeding arthropods interact with their various vertebrate hosts and with the human pathogens that they transmit. These interests synthesize biological experimentation, epidemiological analysis, and population studies. Students become familiar with the various arthropods that are associated with human disease and learn the ways environmental change may result in ill health. Doctoral students conduct studies on mechanisms of transmission of vector-borne pathogens, both in the laboratory and in the field, and devise novel intervention strategies. In addition to completing the core courses outlined above, students are encouraged to register for entomological and ecological courses in the Graduate School of Arts and Sciences.

Infectious Disease Epidemiology and International Health This concentration leads to a two-semester or four-semester SM degree or to an SD degree. The concentration provides a solid

understanding of epidemiology, ecology, and control of infectious diseases in developing countries. It emphasizes control and prevention measures, and theoretical and practical epidemiologic approaches to solving health problems under resource-constrained circumstances. Graduates fill positions as consultants and leaders in field-based projects, international health organizations, or governmental agencies. The two-semester program provides a useful background for physicians practicing in developing countries or involved with infectious disease teaching or research.

In addition to completing the core courses outlined above, students in this concentration must take PIT 250b, *Epidemiology of Infectious Diseases of Public Health Importance in Developing Countries*, and may elect to take TPH 204d, *Introduction to the Techniques of Investigation of Parasitic Infections*, or TPH 205c, *Clinical and Pathologic Features of Tropical Diseases*, in place of TPH 206d, *Principles of Public Health Entomology*. Recommended electives include NUT 210cd, *Nutritional Problems of Less-Developed Countries*, as well as upper-level epidemiology and biostatistics courses, and courses dealing with the epidemiology of infectious diseases, such as EPI 214d, *Epidemiologic Analysis of Outbreaks and Infectious Diseases*; PIH 200a, *Population and Health*, and PIH 220ab, *Introduction to Demographic Methods*.

Immunology and Molecular Biology of Parasitic and Other Infections This concentration is designed for PhD students in the Biological Sciences in Public Health Program. It introduces students to recent advances in the biology of parasitic and infectious diseases and provides

Professor Dyann Wirth's research centers on tropical disease, primarily malaria and leishmaniasis. One aspect of her work is the development of new diagnostic techniques that would allow earlier treatment of diseases.

Interdisciplinary Program in Infectious Disease

Additional doctoral-level educational and training opportunities relating to infectious diseases are available through the Interdisciplinary Program in Infectious Disease. Students in this program fulfill the departmental requirements for doctoral students with additional coursework in biology, quantitative methods, and infectious disease. For more information on this program, see page 5.

Faculty

Department Chair: John R. David, MD (University of Chicago); Richard Pearson Strong Professor of Tropical Public Health; Professor of Medicine, Harvard Medical School. Immunology of migration inhibitory factor (MIF); the biologic role of rMIF; the biology of parasitism, encompassing leishmaniasis and schistosomiasis, transfer of technology from bench to field site (Brazil) on problems of host resistance, risk factors, and control strategies.

Donald A. Harn, Jr., AM (University of Northern Colorado), PhD (University of California, Los Angeles); Professor of Tropical Public Health; Assistant Professor of Medicine, Harvard Medical School. Regulation, or direction, of immune responses due to the molecular composition of particular antigens; development of synthetic peptide and DNA vaccines for parasitic diseases.

Willy F. Piessens, MD (Free University of Brussels); Professor of Tropical Public Health; Associate Professor of Medicine, Harvard Medical School. Immunology and molecular biology of filarial nematodes; pathogenesis of lymphatic filariasis and onchocerciasis; regulation of cellular and humoral immune responses to molecularly defined recombinant parasite antigens.

John C. Samuelson, MD, PhD (Harvard University); Associate Professor of Tropical Public Health. Use of molecular biological and biochemical techniques to study *Entamoeba histolytica*, the protozoan parasite that causes amebic dysentery.

Andrew Spielman, DSc (Johns Hopkins University); Professor of Tropical Public Health. Epidemiology of vector-borne disease; physiology and ecology of mosquitoes and ticks; development of infectivity of pathogens in mosquitoes and ticks.

Dyann F. Wirth, PhD (Massachusetts Institute of Technology); Professor of Tropical Public Health. Mechanisms of drug resistance in malaria, including molecular genetic analysis and field-based studies; genetic analysis of malaria transmission; analysis of gene expression, transsplicing and homologous recombination in *Leishmania enriettii* using molecular genetic techniques.

After Arlyne Beeche received her bachelor's degree in microbiology from the University of California, San Diego, she spent several years working in a variety of biotech jobs. "I enjoyed the lab work," says Arlyne, "but I wanted to interact more with people and do some field work, so I went to Zaire [now the Democratic Republic of the Congo] to see what kinds of opportunities there might be for me there. I was struck by the number of children with preventable ill-

nesses, and I decided that I could best help them by learning more about health in tropical areas and then going back to Africa to help prevent tropical diseases."

In the meantime, while earning her master's degree at HSPH, Arlyne is an enthusiastic member of the Minority Student Health Organization (MSHO): "We do a lot of community outreach to the neighborhoods surrounding the school. What makes MSHO a great group is that it's full of people committed to acting and doing things, rather than simply talking about them."

background for conducting research on these diseases. The program emphasizes molecular biology, immunology, cell biology, and the epidemiology of parasites.

Master of Science in Tropical Public Health (four-semester program)

Students in the four-semester SM program may choose to study Tropical Public Health; Vector Biology, Ecology, and Control; or Infectious Disease Epidemiology and International Health. Please refer to the descriptions above for information about program requirements.

Master of Science in Tropical Public Health (two-semester program)

Students in the two-semester SM program may choose to study in Tropical Public Health or Infectious Disease Epidemiology and International Health. Applicants must hold a previous doctoral degree in medicine, dentistry, or veterinary medicine, or an advanced degree in nursing. Please refer to the descriptions above for information about program requirements.

Doctor of Science in Tropical Public Health

The SD program is designed for those primarily interested in the epidemiology of infectious disease. Students may choose to concentrate in Vector Biology, Ecology, and Control or Infectious Disease Epidemiology and International Health. All SD students must complete 60 credits of research, pass the school-wide oral qualifying examination, and complete, defend, and submit a thesis. Please see the concentration descriptions above for additional information about program requirements. Some funding may be available through a training grant for US citizens and permanent

residents enrolled in the SD program.

Doctor of Philosophy in Biological Sciences in Public Health (BPH) (Immunology and Molecular Biology of Parasitic and Other Infections)

Students wishing to study cellular and molecular biology or immunology as they pertain to major problems in public health should apply to the Biological Sciences in Public Health program. This program offers the PhD degree through Harvard University's Graduate School of Arts and Sciences, Division of Medical Sciences, Committee on Biological Sciences in Public Health.

The PhD program affiliated with this department is designed to train scientists in state-of-the-art concepts and methods in the biology of parasites and other important infectious diseases. The program offers a firm foundation in the basic biomedical sciences, as well as in epidemiology and biostatistics. Specific courses supplement this core, as dictated by individual research concentrations. Students in this program engage in laboratory rotations in three different research areas, to enable them to assess realistically their interests in a thesis project and to evaluate the suitability of the laboratory

and the mentor. At the completion of these rotations, students select an area of concentration and a thesis research laboratory and complete the required curriculum. A qualifying examination must be passed before engaging in thesis work, and the thesis must be defended before the granting of the PhD. Some students also participate in the Harvard-Markey Biomedical Scientist Training Program, which is designed to offer PhD students a greater knowledge of human biology and disease.

Applicants generally have a bachelor's degree and demonstrated competence in organic and biological chemistry, general biology, physics, and calculus. Those deficient in one of these areas may be admitted provisionally on the condition that appropriate courses will be taken before and/or after entering the program. Applicants must take both the GRE general and subject tests by October in order to meet the application deadline of December 15.

All students admitted to the program receive a stipend and tuition support. Students are encouraged to apply for fellowships from outside sources since certain external fellowships provide higher stipends. Although funds to support international students are limited, one special scholarship is available each year for a student from a developing, sub-Saharan African country. There is also a university-wide fellowship program that provides funding to qualified underrepresented minority students in the sciences.

Courses Offered by the Department of Tropical Public Health, 1997-98

Please note that this list may be incomplete and is subject to change. Detailed course listings, including information about prerequisites, course activities, and scheduling, are distributed to students with registration information.

Letters following course numbers indicate the period(s) in which a course is given: a and b (fall quarters); c and d (spring quarters); e and f (one-week sessions in January and March); s and t (1998 summer sessions).

ID 201cd. Biology, Epidemiology, Economics, and Policy (BEEP): Malaria (Spielman)

Exposes students to vector control, diagnosis, chemotherapy, and vaccines for malaria from the point of view of social, political, and economic policy. Evalu-

ates the impact of programs from an international and local perspective using techniques from social and biomedical sciences. (2.5 credits)

TPH 201a. Ecology, Epidemiology, and Control of Important Parasitic Diseases of Developing Areas (Maguire)

Introduces ecological and epidemiologic concepts basic to the control of infectious agents. Considers parasitic diseases of significance in the developing areas of the world, and elucidates epidemiologic principles of vector-associated diseases. (3 credits)

TPH 203c. Tuberculosis (Piessens, Nardell)

Covers the immunobiology, aerobiology, and molecular aspects of tuberculosis that underlie diagnostic and control strategies. Includes discussions of the impact of HIV/AIDS, drug resistance, and compliance on tuberculosis control and prevention. (2.5 credits)

TPH 204d. Introduction to the Techniques of Investigation of Parasitic Infections (Maguire, Telford)

Emphasizes laboratory methods for the study of parasitic diseases. Provides exposure to theory and application of techniques essential to epidemiologic and laboratory investigation. (2.5 credits)

TPH 205c. Clinical and Pathologic Features of Tropical Diseases (Maguire, von Lichtenberg)

Emphasizes the clinico-pathologic aspects of tropical diseases. Disease entities are reviewed through clinical cases with exposition of the pertinent clinical and pathologic features. (1.25 credits)

TPH 206d. Principles of Public Health Entomology (Spielman)

Discusses from ecological, physiological, and genetic points of view the manner in which arthropods transmit disease and the principles of vector control. Includes weekend field trips. (2.5 credits)

TPH 208cd. Immunology of Infectious Diseases (Harn)

Presents the interactions of pathogens with the host immune system, from pathogen invasion to pathogenesis. (5 credits) Not offered 1997-98.

TPH 216cd. Cellular and Molecular Biology of Parasites (Samuelson)

Covers aspects of cell, developmental, and molecular biology of protozoan and helminth parasites of humans. (5 credits) Offered 1997-98 and alternate years.

Independent Study

Individual students or small groups of students who wish to go beyond the content of regularly scheduled courses may arrange with individual faculty members to participate in departmental research or undertake specialized readings or studies. Various parasites of medical importance are maintained and are available for studies on immunology, molecular biology, cell biology, biochemistry, and chemotherapy.

For more information about the SM and SD programs, please contact the Department of Tropical Public Health, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1201

Fax: 617-738-4914

For application materials and information about admission to the PhD program, please contact the

Division of Medical Sciences, Harvard Medical School, 260 Longwood Avenue, Room 435, Boston, MA 02115.

Phone: 617-432-0162

Applicants who have specific questions about the PhD program may contact Ruth Kenworthy, Division of Biological Sciences, 665 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-4470

Fax: 617-432-4098

E-mail:

kenworthy@cvtlab.harvard.edu

The following faculty member has a secondary appointment at HSPH. His primary affiliation is with Harvard Medical School.

James H. Maguire, MD, MPH (Harvard University); Associate Professor in the Department of Tropical Public Health. Clinical features and epidemiology of parasitic diseases.

Adjunct Faculty

Charles B. Shoemaker, PhD; Chief of Molecular Parasitology, Agricultural Research, Wallaceville Animal Research Center.

Summer Programs and Continuing Professional Education

David Shore, assistant dean for continuing professional education, heads a center that will offer more than forty courses to health professionals this year.

Summer Session for Public Health Studies

Session s: July 1-25, 1997

Session t: July 28-August 15, 1997

Director: Roberta Gianfortoni, MA, Director for Professional Training, Office for Professional Education

The Harvard Summer Session for Public Health Studies introduces students to the core areas of public health in two intensive sessions. It helps them develop the ability to define, assess, and evaluate the health needs of populations, to participate in the development of health policy, and to assure the delivery of health services.

Students in the Summer Session attend one or two sessions in July and August. The 1997 curriculum includes courses in biostatistics, epidemiology, health care management, health policy,

ethics, and environmental health. Each course offers 2.5 credits, and the maximum recommended course load is 5 credits (two courses) per session. Because the course work is very intensive and fast-paced, students registered for two courses in a session should not have other work commitments.

The Summer Session is intended for health professionals in training or those who are considering a midcareer change into public health and feel the need to strengthen their skills. Participants include public health professionals, primary care practitioners, physicians engaged in the evaluation of health care delivery and management, physicians in training (including preventive medicine residents and medical students in an MD/MPH joint degree program), and candidates for a part-time MPH program. Students accepted for admission to an HSPH degree program may choose to begin their studies early by enrolling in the Summer Session; these students will then have greater flexibility in course selection during the academic year. Other students may subsequently seek admission to an HSPH degree program.

Tuition for the Summer Session is \$525 per credit.

Summer Program in Clinical Effectiveness

July 1-August 15, 1997

Co-directors: E. Francis Cook, SD, Professor of Epidemiology; Arnold M. Epstein, MD, Professor of Health Policy and Management; and Anthony Komaroff, MD, Professor of Medicine, Harvard Medical School.

The Program in Clinical Effectiveness is affiliated with Brigham and Women's Hospital, Massachusetts General Hospital, and Harvard Medical School, and is intended for physicians who have completed their residencies and wish to obtain the quantitative and analytical skills needed for careers in clinical research. Candidates must be fellows or faculty members and must be sponsored by their clinical departments or divisions.

Students in this program attend an intensive seven-week, 15-credit summer program, comprising courses in biostatistics, epidemiology, and health policy and management. Upon completion of the summer program, qualified participants may apply these academic credits toward the requirements for either a Master of Public Health (MPH) or Master of Science (SM) degree. Two degree programs specifically designed for students in this field are the MPH with a concentration in Clinical Effectiveness (see page 9) and the SM in Epidemiology with a focus on Clinical Epidemiology (see page 38). Qualified participants unable to attend class during the regular academic year may fulfill requirements for the SM in Epidemiology degree program by attending classes during a second or a third summer period and by completing a supervised research project.

English for Professional Communication

August 18-29, 1997

The teaching style of American classrooms is highly interactive and requires proficiency in spoken English. Students are expected to ask questions in class and to respond quickly in classroom discussions.

A two-week course for non-native English-speaking students entering HSPH is offered for six hours each day for two weeks. Students practice their English language skills by listening to and discussing material with public health content. The course focuses on understanding rapidly spoken English, giving brief presentations, responding to questions, and offering a point of view in discussions. This course is strongly recommended for students who have not had previous experience in a US classroom. The program is also valuable for all students who wish

to strengthen their spoken English and to gain experience participating in small-group discussions.

The tuition for the English for Professional Communication Program is \$750.

Advance Seminar Program

September 2-12, 1997

The Advance Seminar Program presents an opportunity for new international students and Master of Public Health (MPH) students to orient themselves to HSPH and to Boston. It provides a brief, intensive introduction to the academic aspects of study at the school, including beginning and intermediate computing, exercises in the discussion method of classroom learning, and a review of mathematical and writing skills.

Program participants learn about classroom protocol, expectations of teacher and student, and student life at the school. They have the chance to become familiar with, and settled in, the Boston area, and to become acquainted with fellow students in workshops and social gatherings.

The program is particularly valuable for those students who have not attended US colleges or universities and for those who have not recently been students. All international students are strongly advised to attend; US students entering the MPH program are welcome and encouraged to attend.

Center for Continuing Professional Education

Director: David A. Shore, MPA, PhD, Assistant Dean for Continuing Professional Education

Organizations and technology evolve so rapidly that health professionals must continually gain new skills and perspectives. The Center for Continuing Professional Education (CCPE) creates programs to address the issues facing health professionals. Grounded in the Harvard tradition of innovative research and practice, these programs benefit participants wishing to assume and advance in positions of leadership in all fields of public health. Through a variety of formats and forums, including teleconferences and courses customized for and located at various

For more information about the Summer Session for Public Health Studies, please contact Hildi Keary, Administrative Assistant for Summer Programs, Registrar's and Admissions Offices, 677 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-1052
Fax: 617-432-2009

Continuing Professional Education Courses 1997-98

1997

June 16-August 8	Managing Health Programs in Developing Countries	March 9-11	Certification Review for Occupational Health Nurses
August 11-15	Occupational and Environmental Radiation Protection	March 16-19	Comprehensive Industrial Hygiene Review
August 18-22	In-Place Filter Testing Workshop	March 23-27	Fundamentals of Industrial Hygiene
August 19-22	Nuclear Emergency Planning	March 23-27	Occupational and Environmental Radiation Protection
August 25-29	Comprehensive Industrial Hygiene Review	March 25-27	Effective Strategies for Building Clinical Performance Measures Based on Practice Guidelines
August 26-28	Basic CAMEO for Windows Training	March 29-April 3	Advanced Program in Health Care Negotiation and Conflict Resolution
September 8-12	Certified Safety Professional (CSP) Review	April 1-3	Benefit-Cost Analysis for Environmental, Health, and Safety Regulation
September 15-19	Industrial Ergonomics: Human Factors in Occupational Health and Safety	April 2-3	Occupational Health Physical Assessment Skills for Nurses
September 23-26	Analyzing Risk: Science, Assessment, and Management	April 6-10	Guidelines for Laboratory Design: Health and Safety Considerations
October 6-10	Fundamentals of Industrial Hygiene	April 20-23	Certified Safety Professional (CSP) Review
October 12-24	Leadership Development for Physicians in Academic Health Centers	May 4-8	Managing Ambulatory Health Care For Physicians in Community Health Centers
October 14-16	Electric and Magnetic Field Health Research: Assessing the Science	May 14-55	Spirometry Testing in the Workplace
October 16-17	Spirometry Testing in the Workplace	May 18-20	Orientation to Indoor Air Quality
November 2-7	Leadership in Evolving Health Care Systems	May 21	Hands-On Measurement and Diagnostics: Evaluating the Indoor Environment
November 13-14	Understanding Environmental Air Quality Issues in Health Care Settings	May 22	The Indoor Environment: Control Strategies and Communication Risk
November 17-19	Leadership and Management Skills Essential for Health and Safety Professionals	June 8-11	Radioactivity in the Environment: Risk, Assessment, and Measurement
November 20-21	Risk Management and Liability Issues in Occupational Safety and Health	June 9-12	Human Rights and Health
December 2-5	Strategic Financial Leadership for Community Health Centers and Hospitals	June 15-19	Management and Disposal of Radioactive Waste
1998		June 17-20	Measurement, Design, and Analysis for Health Outcomes Research
January 18-30	Program for Chiefs of Clinical Services	June 23-26	Cost-Effectiveness Analysis for Medical Technologies and Pharmaceuticals
February 2-3	Spirometry Testing in the Workplace		
February 8-13	Advanced Program for Chiefs of Clinical Services		
February 23-26	Analyzing Risk: Science, Assessment, and Management		
March 2-5	Management Essentials for Physicians in Community Hospitals and Practices		

For a brochure and a complete list of continuing professional education courses, please contact the Center for Continuing Professional Education, 677 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-1171
Fax: 617-432-1969
E-mail: contedu@sph.harvard.edu

organizations, CCPE provides learning opportunities that keep pace with and anticipate the needs of public health practitioners.

Harvard faculty members lead the programs in cooperation with other experts who have earned international reputations for excellence in their fields. Participants benefit from a wide and diverse body of knowledge. Through the exchange of insights and ideas between participants and instructors, programs encourage and create a dynamic learning environment. Many sessions use the Harvard case study method of instruction to facilitate fast-paced, interactive problem solving, while others include hands-on laboratory sessions and demonstrations with field equipment.

To increase the value to participants, programs offer continuing medical education credit and other forms of continuing professional education credit in areas of industrial hygiene and health care licensing and credentialing. Each participant receives a certificate of attendance.

A partial list of continuing professional education courses offered during the 1997-98 academic year appears above. Dates are subject to change.

Applying to the School:

Admissions, Financial Aid, and Housing

Admission to Degree Programs

The admissions information in this section pertains to applications for degree programs offered by the Harvard School of Public Health. These are the Master of Public Health (MPH), Master of Occupational Health (MOH), Master of Science (SM), Doctor of Public Health (DPH), and Doctor of Science (SD) degrees.

The PhD programs described in this *Register* are offered under the auspices of the Graduate School of Arts and Sciences (GSAS). Please note that GSAS application forms and procedures are different from those used by applicants to programs administered by HSPH. The GSAS application deadlines are December 15, 1997, for programs in the natural sciences and December 30, 1997, for all other programs. For information about admission to the Biological Sciences in Public Health Program, please contact the Division of Medical Sciences, Harvard Medical School, 260 Longwood Avenue, Room 435, Boston, MA 02115 (phone: 617-432-0162). For information about admission to the PhD Program in Health Policy, please contact Joan P. Curhan, Director, 79 John F. Kennedy Street, Cambridge, MA 02138 (phone: 617-496-5412). (See page 11 for further information about PhD programs in the biological sciences and page 54 for information about the PhD in health policy.)

Application Deadline Applications for all HSPH doctoral (SD and DPH) and Master of Science (SM) programs must be complete by January 2, 1998.

All complete applications for the MPH and MOH programs that are received on or before January 2, 1998, will be considered in a priority admission cycle. The deadline for complet-

ing applications to MPH and MOH programs for review in a second cycle is February 27, 1998. It is to the candidate's advantage to meet the priority deadline, as these degree programs may fill to capacity during the priority MPH admission cycle. Applications that arrive after February 27, 1998, and those that remain incomplete as of that date, will not be considered for admission for the 1998-99 academic year.

Clinical Effectiveness and Summer Institute affiliates matriculating in the 1998 summer program who wish to apply for degree candidacy must do so by September 2, 1998.

Application Procedures and Requirements Only complete applications will be processed and reviewed for admission. For an application to be

It is the policy of HSPH to make admission decisions on the basis of an individual's qualifications for the program to which he or she has applied. In decisions about admission and financial aid, HSPH does not discriminate against individuals on the basis of race, color, sex, sexual orientation, religion, age, national or ethnic origin, political beliefs, veteran status, or disability.

considered complete, the Admissions Office must receive the following application materials by the deadline indicated above:

- A completed and signed application form, a self-addressed, stamped notification postcard, and a 500-word essay written by the applicant. This essay should describe the applicant's academic and professional history, area of interest at HSPH, reasons for wanting to enroll in the degree program, and professional or academic career plans upon completion of the program.
- Official transcripts from all colleges, graduate schools, and/or professional schools attended, whether or not the courses taken appear to be relevant to a degree in public health. Transcripts should list courses taken, grades received, and degree(s) conferred (if applicable). Each transcript must be received by the Admissions Office in an envelope sealed and signed by the registrar of the school issuing the transcript. Applicants are expected to have a distinguished undergraduate record, as well as excellent performance in any graduate work undertaken.

- Letters of recommendation from at least three people who are well acquainted with the applicant's academic work and/or professional experience. (Recommendation forms are provided in the application packet.)
- Official scores of the Graduate Record Examination (GRE). Because applications will not be considered without test score reports, applicants should take the GRE no later than October. Official scores from the following tests may be substituted by applicants who are currently working toward or who have earned postbaccalaureate degrees in medicine, dental medicine, management, or law, respectively: Medical College Admission Test (MCAT), Dental Admission Test (DAT), Graduate Management Admission Test (GMAT), or Law School Admission Test (LSAT). Strong test scores, especially on the quantitative portion of the test, are important. The requirement for scores from a standardized test may not be waived on the basis of academic or professional background.
- Official scores of the Test of English as a Foreign Language (TOEFL), if applicable. Applicants (including those who have been US citizens or US permanent residents for less than one year) from countries where English is not the language of instruction must submit a score from the TOEFL. Applicants are advised to take the TOEFL no later than November; those who have already taken the TOEFL may submit the score as long as it is not more than two years old. While a minimum score of 550 is required for admission to a degree program, preference is given to doctoral applicants with scores closer to 600, due to the demanding nature of the program. In rare circumstances, an applicant may be admitted to special student status with a TOEFL score of 547 to 549. Subsequent admission to degree candidacy, if desired, is contingent upon the applicant's re-taking the TOEFL and receiving a minimum score of 550. Some students may be required to complete an English course before attending courses at HSPH.
- A non-refundable application fee of US \$60 in the form of a check drawn on a bank in the United States, a postal money order, or an international money order payable to the Harvard School of Public Health.

An applicant may apply to only one degree program (MPH, MOH, SM, SD, or DPH). An applicant who wishes to apply for a joint degree in two departments should submit a petition requesting consideration by both departments. Requirements for admission to both departments must be satisfied. Applicants to degree programs must apply for either full-time or part-time status; international students are eligible for full-time study only. Admission is granted for the fall semester of a particular year (currently September, 1998). Students who are unable to enroll at that time may request a deferral and may be required to reapply. Applicants who require an early decision may apply during the admission period for the year before the one in which they wish to enroll (for example, they may apply during the winter of 1997-98 for admission in September, 1999).

Application Review Applicants are notified in writing of their application status soon after the application is received. If the application is incomplete, the applicant is informed of the items still outstanding. Applications to MPH and MOH programs that become complete after January 2 will be held for review in a second group. The applicant is notified in writing as soon as a decision is made. The decision of the Committee on Admissions and Degrees is final and is not subject to appeal.

Tuition Deposit and Financial Certification Applicants who are granted admission must submit a \$500 tuition deposit when confirming acceptance of the offer of admission. This deposit is nonrefundable and will be applied toward the student's tuition and fees.

Accepted applicants who are not US citizens or permanent residents must demonstrate that sufficient funds are available in US currency to pay the costs (tuition, fees, living expenses, and costs associated with the English for Professional Communication Program, if applicable) of the full period of their academic program. A financial certification form is included in the admission packet for this purpose and must be completed before the certificate of eligibility form (I-20 or IAP-66) needed to obtain a visa can be issued. In addition, international students supported by personal funds, family funds, or sponsors' funds which are not paid directly to Harvard University are required to deposit, in a

Boston-area bank in an account bearing their name, funds adequate to cover the appropriate tuition, fees, and living expenses for the degree program. An official letter stating the amount held in US dollars must be sent directly by the bank to the Admissions Office for each account before the immigration forms can be completed. Students bringing their families to the US must transfer and certify adequate funds for their support as well. Please see page 90 for an estimate of living expenses in the Boston area.

Admission to Nondegree Status

Affiliates Harvard faculty and staff, employees of Harvard-affiliated hospitals, HSPH alumni, and certain other Boston-area public health professionals may register for up to 10 credits per semester as nondegree affiliates of the school. Affiliates must register in person at the HSPH Registrar's Office. Please call the Registrar's Office at 617-432-1032 to learn the exact dates for affiliate registration.

Enrollment of affiliate students in specific courses is subject to the availability of space and the permission of the instructor and the registrar; if classes fill to capacity, preference is given to HSPH degree candidates. Payment is on a per-credit basis and is due at the time of registration. Payment is not refundable unless the student is unable to take the desired course because it is filled to capacity. Affiliate students may not cross-register into other Harvard schools or MIT, nor may they audit courses.

Special Students Individuals who do not fall into one of the categories listed above may apply for special student status. Applicants for special student status are subject to the same admission and registration requirements, procedures, and deadlines as are applicants for degree candidacy. US citizens and permanent residents may apply to the Admissions Office for full-time or part-time special student status. Foreign applicants are eligible for full-time status only. Admission to special student status is limited to one academic year.

Subsequent Application for Degree Candidacy Affiliates and special students who wish to be admitted to degree candidacy must reapply and will be considered on the same basis as other applicants for admission. Applicants to degree

Please refer to the instruction booklet that accompanies the application forms for detailed procedures and requirements. Prospective degree candidates or special students who wish to request application materials, who have questions about admission requirements, who require assistance with the application process, or who wish to visit the school should contact Caroline Daniels, Assistant Director of Admissions, HSPH Admissions Office, 677 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-1031
Fax: 617-432-2009

Housing

The Henry Lee Shattuck International House is operated by the school on a nonprofit basis for its full-time students and their families from the United States and abroad. Located within walking distance of the school, Shattuck International House has 72 apartments in a range of sizes to accommodate single students, roommates, and families. Each apartment is furnished and has its own kitchenette and bath. Shared facilities include a laundry room, study/function room, computer room, TV room (equipped with VCR), library, music room (with piano), exercise room (with cross country ski simulator, exercise bicycle, and ping-pong table), children's playroom, and outside recreation area (with barbecue grill, basketball hoop, volleyball court, swing set, and slide). The four-story building is not equipped with an elevator.

Because the demand for apartments far exceeds their availability, applications for Shattuck International House should be submitted as early as possible. Applicants to the school may submit a housing application before receiving notification of admission. However, apartments are not assigned until applicants are admitted and have confirmed their intention to enroll. If an applicant is denied admission to the school, the application for housing will be withdrawn. Applications received by May 1 will receive priority consideration; applications received after that date will be considered until all units are filled. A waiting list will be maintained throughout the summer and fall.

International students may live in Shattuck International House a maximum of three years, and US and Canadian students may stay a maximum of two years, assuming they continue to be full-time students. Seventy percent of the available apartments are assigned to international students and thirty percent to US and Canadian students. The dis-

Tuition and Fees, July 1997-June 1998

Tuition for full-time master's degree students and special students

(20-credit minimum and 25-credit maximum per semester, fall and spring. *Beginning 1998-99, full-time students will be limited to 45 credits per academic year.*)

\$20,890 per year

Tuition for part-time master's degree students, special students, and affiliates

(1-19 credits per semester, fall and spring, with a maximum of 15 summer credits.

Part-time students may take 45 credits per year for the comparable full-time tuition rate.)

\$ 525 per credit

Tuition for full-time resident doctoral students

(20-credit minimum and 25-credit maximum per semester, fall and spring. *Beginning 1998-99, full-time students will be limited to 45 credits per academic year.*)

Full-time, year 1 \$20,890 per year

Full-time, year 2 \$20,890 per year

Full-time reduced, year 3 \$10,445 per year

Facilities fee, year 4 to thesis defense \$ 2,612 per year

Thesis defense fee (final semester before graduation) \$ 1,120 one semester

Tuition for part-time resident doctoral students

Credits 1-90 \$ 525 per credit

Credits 91-130 \$ 263 per credit

Credits 131 to thesis defense \$ 70 per credit

Thesis defense fee (final semester before graduation) \$ 1,120 one semester

Tuition for nonresident doctoral students, full-time or part-time \$ 1,400 per year

Tuition for summer session 1997 \$ 525 per credit

Fees

Registration fee (summer, fall, spring) \$ 125 per semester

Late registration fee \$ 80 per week

Late add/drop/change fee \$ 80 per petition

Leave of absence fee \$ 280 per semester

Health fees (see page 89) \$ 333 per semester

Note: Tuition rates are given in 1997-98 tuition dollars. Continuing students should expect an increase.

programs who have taken courses at the school within the preceding three years may, at the time of their application, petition to count up to 20 credits retroactively as part of the academic credit requirements. Permission may be granted if the courses fit into the applicant's academic degree program. (Applicants who have taken HSPH courses within the past three years while enrolled at another Harvard school or at MIT may petition to count up to 20 credits toward

their HSPH degree only if the courses taken did not count toward another degree. The applicant must submit, at the time of his or her application, an official transcript from the other school, as well as a letter from that school's registrar stating that the courses taken at HSPH have not been counted toward another degree.) Up to 20 credits of tuition payment may be counted toward the school's tuition requirement.

Health Fees, September 1997-August 1998

University Health Services (UHS) Fee	Semester	Year
Individual	\$ 333	\$ 666
Family (student plus spouse)	666	1,332
Family (student plus spouse and one child)	851	1,701

The University Health Services (UHS) provide comprehensive prepaid medical care such as physical examinations, physician visits, laboratory tests, psychological counseling, and emergency services. The UHS fee is compulsory for all degree candidates and special students registered for 10 or more credits in a semester. Others may elect to waive UHS coverage; this must be done before the first day of fall registration.

Blue Cross/Blue Shield (BC/BS) Medical Insurance

Individual	\$ 277	\$ 554
Family (student plus spouse)	823	1,645
Family (student plus spouse and one child)	1,237	2,474

The Blue Cross/Blue Shield (BC/BS) plan provides extensive benefits for ambulatory and inpatient care not offered at UHS. BC/BS coverage is compulsory for all nonimmigrant international students and for all other students who do not have comparable insurance. International students whose spouse and/or children will also be living in the US are required to enroll in the family plan. US students who have comparable insurance may elect to waive BC/BS coverage; this must be done before the first day of fall registration.

Note: UHS and BC/BS coverage extends from September 1 through August 31. For more information, please contact the Student Insurance Office, Harvard University Health Services, 75 Mt. Auburn Street, Cambridge, MA 02138 (phone: 617-495-2008; fax: 617-496-6125).

tance of a student's home from Boston and the date of receipt of the application are the determining factors in the assignment of apartments.

Applicants visiting HSPH may meet with Carol LaFleur, Graduate Services Coordinator, to discuss housing options or may wish to consult the apartment listings located in the Office of Student Affairs and Residential Life. Printed information about seeking and renting apartments in Boston is available upon request.

For information about housing and to request application forms for Shattuck International House, please return the postcard inside the back cover of this Register, or contact Carol LaFleur, Graduate Services Coordinator, HSPH Office of Student Affairs and Residential Life, 677 Huntington Avenue, Boston, MA 02115.

Fax: 617-432-3184

Financial Aid

The table on page 90 provides estimates of the cost of spending a year at HSPH and should be used as a guide in planning finances. While academic departments and the Financial Aid Office make every effort to help students find ways to finance their education at HSPH, the school does not offer need-based grants, and resources for student financial aid are extremely limited. Applicants are urged to investigate all potential sources of support, including employers, government agencies, and civic and religious organizations.

Limited financial aid is available in the form of grants, loans, and work programs, as follows:

Grants Some departments have training grants that provide funds up to full tuition plus stipend. Eligibility for training grants is generally based on career goals, academic merit, experience, and US citizenship or permanent residency.

Other grants also may be available, eligibility for which varies according to departmental goals and priorities. All incoming students are considered for these funds, and no separate application need be submitted.

Federal Student Loans The Financial Aid Office administers several federal Title IV student loan programs. US citizens and permanent residents may be eligible to borrow up to \$18,500 of Federal Direct Student Loans if they meet the registration status requirements, submit the required financial documentation, have no prior federal student aid loans in default, and do not owe refunds on other federal student aid. Perkins Loans of up to \$5,000 may be available to a limited number of students demonstrating extreme financial need.

Work Programs Some full-time students obtain part-time employment as research or teaching assistants in their academic departments. The

Estimated Student Expense Budgets, 1997-98

Please refer to the instruction booklet that accompanies the financial aid application forms for additional information about loan and work programs. Applicants with questions should contact the HSPH Financial Aid Office, 677 Huntington Avenue, Boston, MA 02115.
Phone: 617-432-1867
E-mail: hsphfao@sph.harvard.edu

school also participates in the Federal Work-Study Program, which covers up to 60% of the earnings of US citizens and permanent residents.

To be considered for federal loans, work-study, and need-based grants, students must submit the following documents to the Financial Aid Office:

- Completed and processed Free Application for Federal Student Aid (FAFSA) for 1998-99. The toll-free number to request the FAFSA is 1-800-433-3243; the toll-free number for the hearing impaired is 1-800-730-8913. Allow 4-6 weeks processing time. The FAFSA cannot be submitted before January 1, 1998.
- The Student Aid Report (SAR) should be submitted after the candidate receives the report from the federal processor.
- Completed HSPH Request for Federal Assistance Form for 1998-99. This form should be submitted to the Financial Aid Office by February 13, 1998.
- Signed copy of the applicant's 1997 Federal Income Tax Return, with schedules, or a Non-Filer Statement, and the corresponding W-2 form(s).
- Financial aid transcripts from each institution previously attended, regardless of whether the candidate received aid.

- For permanent residents, a copy of the front and back of the Alien Registration Card.

- For US citizen and permanent resident males born after January 1, 1961, who are not registered with Selective Service, a statement from Selective Service indicating that they did not willfully fail to register. This statement can be obtained by writing to the Selective Service System, Office of the General Counsel, Washington, DC 20435.

- The Financial Aid Office may request other items upon review of initial application.

Staff in the Financial Aid Office review completed financial aid applications as soon as they have been notified by the Admissions Office that the applicant has been admitted to the school and they have confirmed any departmental grant offers. A loan package letter is then sent to the applicant.

Students must disclose to the Financial Aid Office, in writing, any outside funding award(s).

Enrollment and Student Services

Registration

Prior to registration, students receive complete course descriptions and information about course meeting times and registration procedures. Every resident degree candidate is expected to register in person on the dates specified. The fall registration dates for 1997 are September 2 for participants in the Advance Seminar Program, September 4 for other new students, and September 5 for returning students. A student who is unable to register at the designated time should write to the Registrar's Office to request late registration or will be assessed a late registration fee of \$80 per week. Students who intend to cross-register for courses in other Harvard schools or at MIT should be aware that registration deadlines and academic calendars vary from school to school and that they must conform to the registration requirements of the school into which they are cross-registering as well as those of HSPH.

In order to register, students must show that they have met any contingencies stated in their letter of admission, that they have complied with the Massachusetts state regulation concerning immunization against measles, mumps, and rubella, and, for international students, that they have presented their passports and entry permits to the Harvard International Office. Students must take appropriate action to pay their semester term bill by the due date of the bill on which the charges appear. Information about each of these prerequisites is sent to incoming students prior to their arrival at the school.

Degree candidates are subject to certain course load and tuition requirements. All degree candidates (with the exception of students on leave

of absence) are expected to be registered each semester. To be considered full-time, students must take 40 to 45 credits during the nine-month academic year (September to May), with a minimum of 20 credits per semester. Students enrolled in fewer than 20 credits in a semester are considered part-time.

Degree candidates are required to pay full-time or equivalent tuition for a designated number of credits, depending on the length of their program (for example, a student in the MPH program must pay tuition for a minimum of 40 credits in order to receive the degree.) Doctoral students who earned an HSPH master's degree within three years of beginning the doctoral program are credited with tuition paid during their master's program. The *Student Handbook*, dis-

Andrea Wolf, director of career services, at last year's Career Day, an annual event that brings public health employers to the school to meet with students.

Members of the 1996-97 Student Coordinating Committee "The committee is a forum for bringing students from various departments and programs together to discuss issues relevant to all HSPH students," says 1996-97 cochair Sandra Jerez

For information about registration and billing procedures, please contact the HSPH Registrar's Office, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1032

Fax: 617-432-2009

E-mail: manthony@sph.harvard.edu

For information about services provided by the Office for Students or about student organizations and activities, please contact Bernita L. Anderson, MA, Acting Assistant Dean for Students, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-1036

Fax: 617-432-3184

E-mail: banderso@sph.harvard.edu

tributed at registration, provides detailed information about course load and tuition requirements for degree programs.

Incoming full-time degree candidates and special students receive a bill for fall semester tuition and fees in July and on a monthly basis thereafter. (Students matriculating as degree candidates during the summer receive a bill that includes both summer and fall tuition.) Spring semester tuition and fees are charged to the term bill in December. Part-time tuition is assessed in July for fall semester and in December for spring semester at 10 credits. Part-time students wishing to register for fewer than 10 credits should inform the Registrar's office prior to registration so the bill can be reduced accordingly. Students wishing to complete more than 10 (and fewer than 20) credits should inform the Registrar's Office prior to registration so the 10-credit registration cap can be lifted and the bill can be adjusted accordingly. In the case that the Registrar's Office is not notified of a part-time student's registration intentions, payment of 10 credits will be required prior to registration and the student will be limited to 10 credits until the Registrar's office is notified otherwise.

To be eligible for Federal Student Loans, part-time students must register for 10 or more credits. To be eligible to waive the University Health

Service Fee, students must register for fewer than 10 credits.

Other charges that may appear on the term bill include course materials charges, library fines, any charges not covered by the University Health Services fee (for example, some dental and optical shop charges), and rental charges from Harvard Real Estate. Students who are sponsored by a non-Harvard funding agency (for example, the World Health Organization or the US military) must provide original award letters from the sponsoring agency outlining the US dollar amount awarded, the terms of payment for each year the student will be funded, and the duration of the sponsorship. While the sponsor is billed directly at mid-semester, all charges and credits appear on the student's monthly term bill.

Harvard faculty and staff, Harvard alumni, affiliates (except those in summer programs), and Boston-area public health professionals enrolled in nondegree status do not receive a term bill, but must pay all tuition and fees in full when they register. Payment is not refundable if the student elects to drop the course(s) for which he or she has registered.

Student Support Services

The Office for Students provides support services and offers educational, social, and cultural programs that enhance the academic experience, facilitate student development, encourage interaction among students, and help students to cope with the many demands of their academic and personal lives. Responsibilities of the Office for Students include maintaining liaison with the student government and other student groups, and addressing particular needs and concerns of students, both individually and through special programming.

Student Organizations

The Student Coordinating Committee (SCC) includes elected representatives from each department and Master of Public Health concentration and from the Division of Biological Sciences. The SCC meets regularly to discuss issues and plan activities related to student life at HSPH and provides a mechanism for working

with members of the school's faculty and administration on school-wide issues, for sponsoring seminars and other educational programs, for organizing social activities, and for participating in the planning of Commencement. The SCC also arranges for student representation on several of the school's standing committees, including the Committee on Admissions and Degrees, Committee on Educational Policy, Committee on the Use of Human Subjects in Research, Master of Public Health Steering Committee, and Faculty-Administration-Student Liaison Committee. The SCC frequently sponsors or cosponsors collaborative activities with the school and the neighboring community, including tutoring programs, toy drives, and an annual dinner dance for senior citizens.

Other student organizations include the Health and Human Rights Committee, Spanish Speaking Committee of Students and Alumni, Minority Student Health Organization, Asian Student Association, Women in Public Health, and the Lesbian, Gay and Bisexual Association.

Minority Students

The increased participation of underrepresented groups in public health practice and research is essential to the advancement of health in the United States and around the world. The school is committed to expanding the diversity of its faculty, staff, and student body, and members of US minority groups are urged to identify themselves for special recruitment efforts.

The HSPH Minority Student Health Organization (MSHO) plays a leading role in presenting programs on public health issues concerning underserved populations. During the 1996-97 academic year, MSHO sponsored a series of films, lectures, and cultural activities during Black History Month and hosted workshops for students and community activists addressing minority health concerns. The HSPH Spanish Speaking Committee of Students and Alumni takes up issues of importance to that constituency. The Asian Student Association (ASA) promotes both cultural activities at HSPH and Asian student involvement in the community.

The Third World Caucus (TWC) brings together minority students from throughout Harvard's Longwood campus, which includes the medical, dental, and public health schools. TWC comprises four organizations: the Black Health Organization, Boricua Health Organization, National Chicano Health Organization, and Native American Health Organization.

International Students

During the 1996-97 academic year, approximately 26 percent of HSPH students came from outside the United States, representing 39 countries. The experience international students bring to the school lends an important dimension to the academic program and adds to the diversity of the student population. International students organize many cultural events at the school, such as celebrations of Chinese New

For more information on the Minority Postdoctoral Fellowship Program, contact Deborah Prothrow-Stith, MD, Associate Dean for Faculty Development, 677 Huntington Avenue, Boston, MA 02115.

Phone: 617-432-0814

Fax: 617-432-0068

Phone: 617-495-2789

Fax: 617-495-4088

E-mail: m_martin@harvard.edu

The Minority Postdoctoral Fellowship Program

This program was created to provide a bridge between academic training in public health disciplines and entry-level faculty positions for members of underrepresented minority groups. Each fellow works closely with a faculty mentor who helps to foster the fellow's professional development in teaching and research. Fellows normally complete the program in two years, having established an independent research agenda, published papers in peer-reviewed journals, obtained independent grant support, and gained sufficient teaching experience to develop their own courses. Fellows also participate in other activities designed to involve them fully in the formal and informal life of the academic community.

Candidates for this program are American citizens or permanent residents belonging to one of the minority groups (African American, Hispanic/Latino, and Native American) considered to be underrepresented in the faculty ranks. All applicants must hold an earned doctoral degree in a field appropriate to their area of interest at HSPH. The fellowship carries a competitive stipend.

Above: The annual International Night festival provides an opportunity for HSPH students to share their art and culture with the school community.

For more information about career services, please contact **Andrea Wolf**, Director of Career Services, Office for Students, 677 Huntington Avenue, Boston, MA 02115.

E-mail: awolf@sph.harvard.edu

Year, the Latin American equinox festival, and other holidays, and participate in the annual International Night talent show. The HSPH Office for Students sponsors a student host program for international students, which matches incoming students with continuing students.

The Office for Students also helps foreign students adjust to life in the United States. The office sponsors ESL classes at different levels, hosts the Global Chat (a weekly lunchtime meeting that gives students an opportunity to practice their English while learning about each other's native country), and organizes social events and local excursions. Staff in the Office for Students are available to meet with students to discuss personal or academic problems and to assist students and their families who have questions about living in Boston and the United States.

The Harvard International Office, located on the Cambridge campus, provides a variety of services to students from abroad, including orientations, newsletters, and cross-cultural workshops. One program, the Friends of International Students, matches students with a person or family who will welcome them and ease their transition to the US. Maureen Martin, advisor to foreign students and scholars in the Harvard International Office, holds biweekly office hours at HSPH, during which time she is available to assist students with visa matters and to advise them on immigration regulations.

Child Care Facilities

There are a number of child care facilities available to students on the Longwood and Cambridge campuses. Arrangements should be made as early as possible, as facilities are quickly filled. For further information about these centers and other child care options in the area, please contact the Office of the Child Care Advisor at 617-495-2851. The Medical Center Office for Parenting at 617-432-1615 can also provide information on support services, resources, and programs.

Career Services

The Career Services Office provides career counseling, employment resources, networking activities, and professional development opportunities to assist students and alumni/ae in expanding their employment prospects. The office sponsors workshops on job-seeking strategies, interviewing skills, and resume and cover letter writing; panel discussions featuring public health professionals speaking about market trends and career paths; and an annual Career Day. In the Career Resource Center, students have access to listings of current job openings, information about fellowships and internships, and files on many health care organizations. The office maintains a data bank of alumni career advisors and publishes a directory of career resources in international health and a monthly job opportunities bulletin.

Alumni Association

The Alumni Association of the Harvard School of Public Health enjoys an active membership of over 6,000 graduates worldwide. The association is governed by an elected council of twelve members who meet four times each year. Regional gatherings of alumni are often organized in the United States and abroad by members of the association with assistance from the HSPH Office of Alumni Relations. Members of the association are also active in raising funds for student scholarships and travel grants.

The following is a list of HSPH alumni who are available to answer questions that potential applicants may have about departments, curricula, possible career opportunities, and alumni activities. They may also be able to suggest other alumni whose academic and/or career interests more closely match an applicant's or who live in the applicant's immediate area.

Office of Student Affairs and Residential Life
Harvard School of Public Health
677 Huntington Avenue
Boston, MA 02115

ATTN: Carol LaFleur

Volume 19, Number 9

September 5, 1997

Every effort is made to ensure the information contained in this *Official Register* is accurate at the time of publication. However, the Harvard School of Public Health reserves the right to make changes without notice in tuition and fees, admission and degree requirements, courses of instruction, and other information contained herein. These changes will govern all students, including students who matriculated prior to the changes coming into effect.

Nondiscrimination Policy

As a matter of policy, law, and commitment, the Harvard School of Public Health does not discriminate against any person on the basis of race, color, sex, sexual orientation, religion, age, national or ethnic origin, political beliefs, veteran status, or handicap in admission to, access to, treatment in, or employment in its programs and activities. The following person has been designated to handle inquiries about nondiscrimination programs: Carolyn Everette, Director of Human Resources, 677 Huntington Avenue, Boston, MA 02115 (phone: 617-432-1046). Inquiries about the application of nondiscrimination policies concerning race, color, national origin, age, sex, or handicap may also be referred to the Regional Director, Office for Civil Rights, US Department of Education, J.W. McCormack POCH, Room 222, Post Office Square, Boston, MA 02109.

Religious Holidays

According to Chapter 151c, Section 2B, of the General Laws of Massachusetts, any student in an educational or vocational training institution, other than a religious or denominational training institution, who is unable, because of his or her religious beliefs, to attend classes or to participate in any examination, study, or work requirement on a particular day shall be excused from any such examination or requirement which he or she may have missed because of such absence on any particular day, provided that such makeup examination or work shall not create an unreasonable burden upon the school. No fees of any kind shall be charged by the institution for making such opportunity available to

the student, and no adverse or prejudicial effects shall result to any student for availing himself or herself of these provisions.

Campus Security

In compliance with the Student Right-to-Know and Campus Security Act of 1990, the Harvard University Police Department publishes an annual security booklet entitled *Playing It Safe*. The booklet describes Harvard's security policies, provides statistical information on the occurrence of crime on campus, and outlines some of the counseling programs the university offers. You may obtain a copy of *Playing It Safe* from the HSPH Admissions Office, 677 Huntington Avenue, Boston, MA 02115 (phone 617-432-1031).

Voter Registration

Massachusetts state law, as set forth in Chapter 51, Section 42E (Section 17 of Chapter 475 of the Acts of 1993), requires educational institutions to make available affidavits of voter registration. Eligible students may register to vote at registration, and mail-in registration affidavits are available from the Registrar's Office. Students from other states who desire to vote in a state other than Massachusetts may use the federal mail-in affidavit of voter registration or a mail-in form supplied by the state. These students must contact the appropriate state election official to receive the state form or may contact the Massachusetts Elections Division, Room 1705, McCormack Building, One Ashburton Place, Boston, MA 02108, for a federal form.

Harvard University On-Line Course Catalogs

Course information from all of Harvard's faculties is available on-line. The on-line course catalogs contain course descriptions, faculty information, and general information about taking classes at Harvard University. The HSPH course catalog may be accessed via the World Wide Web at <<http://www.hsph.harvard.edu/>>. Information about other Harvard faculties can be found at <<http://www.harvard.edu/>>.
